**DECLARATIONS**

- "I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Sec. 312.10 of 40 CFR Part 312."\*
- "I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I performed and/or developed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312."\*

\*A person who does not qualify as an Environmental Professional may assist in the conduct of all appropriate inquiries in accordance with ASTM E 1527-05, if such person is under the supervision or responsible charge of a person meeting the definition of an environmental professional when conducting such activities.

TCE - trichloroethene

USGS – United States Geological Survey

UST – underground storage tank

VOCs – volatile organic compounds

VCP – Voluntary Cleanup Program

## EXECUTIVE SUMMARY

GeoEngineers has performed a Phase I ESA in general conformance with the scope and limitations of ASTM Practice E 1527-05 of the two parcels owned by Jimmy Barrier located at 11866 NE 8<sup>th</sup> Street and 12000 NE Bellevue-Redmond Road in Bellevue, Washington. The City of Bellevue plans to purchase these two properties for the NE 8<sup>th</sup> to NE 12<sup>th</sup> segment of the 120<sup>th</sup> Avenue NE widening project. Any exceptions to, or deletions from, this practice are described in Section 1.2 of this report. This assessment has revealed no evidence of RECs in connection with the subject properties with the exception of the following:

### Triangle Parking Lot

- Past use of the Triangle Parking Lot (subject property) as a gas station and rental car facility is considered a REC. Releases of petroleum and related compounds have been documented at the site. Some previous USTs and impacted soils were removed; however, residual petroleum-impacted soils and at least one UST remains in-place at the site. These former facilities also constitute a vapor intrusion REC for indoor air or confined spaces based on the potential for residual volatile contaminants in soil, groundwater and/or soil vapor. We note that this property remains a listed contaminated site (status “cleanup started”) in Ecology’s databases. Two monitoring wells installed during prior studies and one tank pit observation well remain on the property; however the condition of these wells was not evaluated for this Phase I ESA.
- The reported presence of dry-cleaning solvents at the Triangle Parking Lot originating from releases associated with the former Bakker Fine Dry Cleaning site approximately 80 feet to the east is considered a REC for the subject property. Dry cleaning solvents PCE, TCE, and mineral spirits (Stoddard solvent) have been documented in soil and/or groundwater at concentrations greater than corresponding MTCA Method A cleanup levels. These conditions also constitute a vapor intrusion REC for indoor air or confined spaces based on the potential for residual volatile contaminants in soil, groundwater and/or soil vapor.

### Barrier Porsche Property

- Auto repair/service activity currently conducted within the Barrier Porsche building is considered a de minimus REC. Housekeeping and hazardous materials storage and handling practices within the building appear to be good, minimizing the potential for release or spills to the property subsurface. In addition, this facility is relatively new and is not a listed contaminated site in Ecology or regulatory files.

One data gap of potential significance was identified for the Barrier Porsche Property: the possibility of historical heating oil use could not be confirmed or denied due to inability to locate prior owners and lack of relevant building heating source records at the City.

A geophysics study and Phase II ESA to evaluate soil and groundwater conditions within the planned future right-of-way of 120<sup>th</sup> Avenue NE has been completed and will be reported separately.

*This Executive Summary should be used only in the context of the full report for which it is intended.*

## 1.0 INTRODUCTION

This report summarizes the results of our Phase I Environmental Site Assessment (ESA) of two parcels owned by Jimmy Barrier located at 11866 NE 8<sup>th</sup> Street and 12000 NE Bellevue-Redmond Road in Bellevue, Washington as shown in Figures 1 and 2. The parcels are identified in this report as Triangle Parking Lot at 11866 NE 8<sup>th</sup> Street and Barrier Porsche at 12000 NE Bellevue-Redmond Road. Triangle Parking Lot is King County parcel number 1099100425 and is currently a parking lot used by Barrier Pre-Owned. The Triangle Parking Lot was formerly a gasoline service station and rental car facility at 11969 NE Bellevue-Redmond Road. Barrier Porsche property (also referred to as Porsche property in this report) is King County parcel number 1099100167 and is developed with a former bakery building now used as a showroom by Barrier Porsche. The two parcels are collectively referred to in this report as “subject properties” or “subject property.” The subject properties are shown relative to surrounding physical features on the Vicinity Map, Figure 1. The layout of the subject properties and surrounding properties is shown on the Site Plan, Figure 2.

We understand that City of Bellevue is planning to acquire the subject properties in connection with the widening and extension of 120<sup>th</sup> Avenue NE. Our study was completed at the request of Parsons Brinckerhoff on behalf of City of Bellevue. We further understand that the results of this Phase I ESA will be used by Parsons Brinckerhoff and City of Bellevue as part of their evaluation of potential environmental liabilities associated with ownership and redevelopment of the subject properties. This report has been prepared for the exclusive use of City of Bellevue, their agents and the project design team. Because this environmental report is not intended for use by others, no one else should rely on this report without first conferring with GeoEngineers.

### 1.1 Phase I Scope of Services

The purpose of this Phase I ESA is to identify recognized environmental conditions<sup>1</sup> (RECs) in connection with the subject property. Our scope of services is in general accordance with ASTM International (ASTM) Standard E 1527-05 for Phase I ESAs and the U.S. Environmental Protection Agency’s (EPA’s) Federal Standard 40 CFR Part 312 “Standards and Practices for All Appropriate Inquiries (AAI),” which are intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner or bona fide prospective purchaser limitations on liability under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). The standard outlines the practice that constitutes “all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice” as defined by 42 U.S.C. §9601. Our services, described below, were completed in general accordance with Contract Amendment No. 2 to Agreement No. PW-R164. These services

---

<sup>1</sup> Recognized environmental conditions are defined in ASTM E 1527-05 as “the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.”

were completed by, or under the direction of, an environmental professional as described in 40 CFR Part 312.

Our specific scope of services for this Phase I ESA was as follows:

1. Review readily available geotechnical reports, environmental reports and/or other relevant documents pertaining to environmental conditions at or near the subject properties.
2. Review the results of a federal, state, local and tribal environmental database search provided by an outside environmental data service for listings of properties with known or suspected environmental concerns on or near the subject properties within the search distances specified by ASTM. Our database and file review search also included a review of EPA and Washington State Department of Ecology (Ecology) websites for readily available information (publications and reports) concerning areawide soil and groundwater contamination on or adjacent to the subject property. Evaluate the possibility for a vapor encroachment condition on the property generally as outlined in ASTM Standard E 2600-10 and state our opinion regarding possible vapor encroachment conditions where noted.
3. Review regulatory agency files regarding listed properties of potential environmental concern relative to the subject properties.
4. Identify a key site manager with specific knowledge of past and present property use and request that the key site manager meet a GeoEngineers' representative on-site for an interview during the visual site reconnaissance and/or an interview by telephone if he or she is not available during the site reconnaissance. We also identified and interviewed others familiar with the use and history of the subject properties, as available and appropriate, including representatives of current occupants that likely use, store, treat, handle or dispose of hazardous substances now or in the past.
5. Interview current owners or occupants of neighboring properties as necessary to gather information or fill property use data gaps regarding the subject properties.
6. Interview past owners and occupants of the subject properties as necessary to gather information or fill property use data gaps regarding property use history.
7. Interview a representative of the local fire department, health department and/or Ecology as necessary to gather information or fill data gaps regarding the history of the subject properties and surrounding properties relative to the likely presence of hazardous substances.
8. Review historical aerial photographs, fire insurance maps, building department records, city directories, chain-of-title reports, and land use and tax assessor records, as available and appropriate, to identify past development history on and adjacent to the subject property relative to the possible use, generation, storage, release or disposal of hazardous substances. We attempted to identify uses of the subject property from the present back to the time that records show no apparent structures on the subject property, back to the time that the property was first used for residential, agricultural, commercial, industrial or governmental purposes, or back to 1940, whichever is earliest.
9. Review current United States Geological Survey (USGS) topographic maps to identify the physiographic setting of the subject property and provide a statement on the local geologic, soil

and groundwater conditions based on our general experience and sources such as geologic maps and soil surveys.

10. Conduct a visual reconnaissance of the subject and adjacent properties to identify visible evidence of RECs.
11. Identify the source(s) of potable water for the subject properties and current heating and sewage disposal system(s) used at the subject property, if any, and their age if readily ascertainable.
12. Identify data gaps relative to the Phase I ESA study findings.
13. Provide a written summary of the Phase I ESA results and identified RECs along with our opinion and recommendations regarding the potential for contamination by hazardous substances at the subject properties and the significance of any data gaps identified.

## 1.2 Special Considerations

The Phase I ESA scope of services did not include an environmental compliance audit or an evaluation for the presence of lead-based paint, toxic mold, polychlorinated biphenyls (PCBs) in light ballasts, radon, lead in drinking water, asbestos-containing building materials, urea-formaldehyde insulation in on-site structures or debris or other potentially hazardous building materials. A hazardous building materials survey will be conducted in the future for the Barrier Porsche building. Our scope of services does not include an assessment of vapor intrusion into structures on the property per ASTM Standard E 2600-08.

A Phase II ESA including soil and groundwater sampling was performed in December 2011 and the results are provided in the Phase II ESA report under separate cover.

The content and format of this report meet the requirements of ASTM E 1527-05; however, for purposes of readability we use a table of contents for this report that is modified from the ASTM E 1527-05 Appendix X4 "Recommended Table of Contents."

## 1.3 Qualifications of Environmental Professional

Dana Carlisle is a registered Professional Engineer (PE) in Washington (#29634) and has at least 10 years of full-time experience doing Phase I ESAs. Dana is an Environmental Professional per 40 CFR Part 312. Jessica Robertson is a licensed geologist (LG) in Washington (#2570) and has at least 5 years of experience doing Phase I ESAs. Jessica is an Environmental Professional per 40 CFR Part 312. See Appendix D for resumes.

## 2.0 PROPERTY DESCRIPTION

### 2.1 Involved Parties

The subject properties are owned by Jimmy Barrier. Barrier Porsche uses the property at 12000 NE Bellevue-Redmond Road. The Triangle Parking Lot is used by Barrier Porsche Pre-Owned. We understand that City of Bellevue is planning to purchase the subject properties in connection with the expansion and rerouting of 120<sup>th</sup> Avenue NE.

## 2.2 Location, Legal Description and Setting

General information, property use(s) and environmental setting of the subject property area are summarized in Table I below. The location is shown relative to surrounding physical features in Figure 1. The current layout of the subject properties and surrounding property uses are shown in Figure 2.

**TABLE I. SUBJECT PROPERTY INFORMATION**

Topographic Map	USGS, 7.5 minute Bellevue, Washington topographic quadrangle map dated 1983.
Quarter/Quarter, Section, Township and Range	SW quarter of SE quarter of Section 28, Township 25, Range 5, Willamette Meridian.
Address	Historical addresses at the Triangle Parking Lot include 11969 NE Bellevue Redmond Road and 11866 NE 8 <sup>th</sup> Street. Barrier Porsche Property uses address 12000 NE Bellevue-Redmond Road, Bellevue, King County, Washington. Addresses of 11968 NE Bellevue-Redmond Road referenced in some regulatory databases appear to be the result of a transcription error.
General Location	The Triangle Parking Lot is located east of the intersection where NE Bellevue Redmond Road ends at NE 8 <sup>th</sup> Street. The Barrier Porsche Property is an approximately rectangular parcel located at the northeast corner of the intersection of 120 <sup>th</sup> Avenue NE and NE Bellevue Redmond Road.
Legal Description	Abbreviated legal description per King County iMAP: Triangle Parking Lot: BRIERWOOD PARK ADD THAT POR OF TRS 81 & 82 & VACATED BELLEVUE-REDMOND RD ADJ DAF - BEG AT SE COR OF SD TR 81 TH N 00-33-08 E ALG E LN SD TR 81 A DIST OF 1.00 FT TO TPOB TH N 89-26-52 W PLW S LN SD TRS 120.94 FT TO PT OF CURVATURE TH NLY ALG CRV TO RGT RAD OF 35 FT ARC DIST OF 89.34 FT TO PT OF TANGENCY TH N 56-48-08 E PLW & 12 FT SELY FR C/L OF SD RD 168.83 FT TO E LN SD TR 81 TH S 0-33-08 W 157.90 FT TO TPOB Barrier Porsche Property: BRIERWOOD PARK ADD PCL 5 BELLEVUE BLA #00244357 LW REC #20001127900008 BEING POR OF SE 1/4 OF SW 1/4 STR 28-25-05
Tax Parcel Number	Triangle Parking Lot: King County Parcel 1099100425 Barrier Porsche Property: King County Parcel 1099100167
Approximate Area	Triangle Parking Lot: 0.37 acres Barrier Porsche Property: 1.06 acres
Existing Use(s)	Triangle Parking Lot: Parking lot for adjacent used Porsche car sales Barrier Porsche Property: Showroom for new Porsche car sales

Geologic Setting	Puget Lowland
Nearest Surface Water Bodies	Lake Bellevue (aka Lake Sturtevant) is located approximately 250 feet west of Barrier Porsche Property and approximately 500 feet northwest of the Triangle Parking Lot.
Approximate Surface Elevation	Triangle Parking Lot is approximately 150 feet above mean sea level (msl; per King County iMAP). Barrier Porsche Property is approximately 160 feet above msl.
Soil and Geologic Conditions	Based on results of recent soil borings at the subject properties, fill soil consisting of silt, sand and gravel is present to depths of between 4 and 13 feet bgs. Native soil encountered beneath the fill consists of stratified medium dense silty sand with occasional gravel typical of glacial outwash deposits. Occasional thin peat deposits are present in the upper portion of the native materials. Very dense glacial till generally underlies the outwash deposits to total depth explored.
Depth to Groundwater	Between approximately 5 and 16 feet bgs, as observed at the time of drilling during recent soil borings at the subject and nearby properties.
Inferred Direction of Shallow Groundwater Flow	Generally to the west or northwest, based on surface topography and previous reports for nearby property.

Our knowledge of the general physiographic setting, geology and groundwater occurrence in the vicinity of the subject property is based on our review of the maps listed above, previous reports for nearby property, and our general experience in the area.

## 2.3 Site Reconnaissance

### 2.3.1 Summary of Observations

A representative of GeoEngineers performed a visual reconnaissance of the subject property on December 15, 2011 and January 12, 2012. Barrier property managers Michael Mauk and Gregg Prokop were identified as a “key site managers” with knowledge of the subject property and were interviewed via phone in December 2011. Interview responses from Mr. Mauk and Mr. Prokop are summarized in Section 4.0.

The Triangle Parking Lot parcel is currently a paved parking lot used by the adjacent used car sales facility. The Barrier Porsche Property parcel is currently developed with one building used for sales and service of new Porsche automobiles. The Subject Properties are located in an area that is developed for commercial uses. Table II below summarizes conditions observed during our site reconnaissance. Section 2.3.2 contains additional details regarding conditions of potential environmental significance observed during our site reconnaissance and a summary list of potential RECs identified by this portion of our study. The approximate locations of the observed features discussed in this section are shown in Figure 2. Representative photographs of the subject property taken during our site reconnaissance are included in Figure 3.

TABLE II. SUMMARY OF SITE RECONNAISSANCE OBSERVATIONS

Features	Observed		Comment
	Yes	No	
Structures (existing)	X		Triangle Parking Lot is currently undeveloped and entirely paved with asphalt. Porsche Property is developed with one large concrete building used for sales and service of new automobiles.
Structures (evidence of former)	X		Asphalt and concrete patches at the Triangle Parking Lot are possible evidence of past buildings at the property.
Heating/Cooling System	X		Porsche Property building is currently heated by natural gas and electric systems.
Floor Drains, Sumps or Drywells		X	Strip drains are located within the Porsche Property building service area. Drains are reportedly connected to an oil/water separator and then the municipal sewer system.
Aboveground Storage Tanks (ASTs)		X	According to Michael Mauk, two 1,000-gallon ASTs are located at the property. The ASTs are used for waste oil and new oil storage. Waste oil is periodically removed by a recycling company as necessary.
Underground Storage Tanks (USTs) or Evidence of USTs	X		One UST fill port was observed within a concrete surface patch on the south side of the Triangle Parking Lot. According to Michael Mauk, a 1,000-gallon UST remains in-place at this location.  No USTs are known to be present at Porsche Property.
Drums or Other Containers	X		Drums of oil and automotive fluids are neatly stored inside the service area of Porsche Property building. Good housekeeping practices were observed in these areas and secondary containment was observed where appropriate.
Chemicals or Hazardous Materials (other than <i>de minimis</i> quantities of cleaning products)	X		Oil and automotive fluids are stored in service areas of the Porsche Property building. Housekeeping practices in these areas appeared good and no leaks or stains were observed. Used batteries are stored on pallets and removed approximately weekly by a recycling company.
Evidence of Leaks, Spills or Releases Surrounding ASTs, USTs and/or Chemical Storage Areas		X	

Features	Observed		Comment
	Yes	No	
Stained or Corroded Floors, Walls or Drains (other than apparent water stains or minor oil stains on pavement from parked vehicles)		X	
Pipes of Unknown Origin or Use		X	
On-site Septic System		X	
Sewage Disposal System	X		Municipal sewer system connection available.
Potable Water Supply	X		Municipal water supply connection available.
Solid Waste Refuse Dumpsters	X		One municipal dumpster was observed in the northeast corner of the Porsche Property. A trash compactor was also observed in an enclosure at the north end of the Porsche Property building. Good housekeeping practices were observed in these areas.
Hydraulic Hoists	X		Hydraulic hoists are located within the Porsche Property building service areas. The hoists are reported by the key site manager to be self-contained units located in shallow concrete-lined vaults.
Oil/Water Separators		X	According to Michael Mauk, an oil/water separator is located in the northwest corner of the Porsche Property. The oil/water separator is cleaned out annually.  Oil/water separators may be located inside the Triangle Parking Lot catch basins but were not observed during the site visit.
Discolored or Stained Soil or Vegetation Potentially from Hazardous Substances		X	
Hazardous Waste Disposal Areas		X	
Uncontained Debris, Refuse or Unidentified Waste Materials		X	
Standing Water or Other Liquids		X	
Catch Basins and Stormwater Drainage	X		Standard municipal catchbasins are located in asphalt parking areas of the Subject Properties. Catchbasins are reportedly connected to the municipal stormwater system which discharges to Lake Bellevue.
Pits/Ponds/Lagoons		X	
Waste or Wastewater Discharges		X	
Unusual Odors		X	
Stressed Vegetation		X	

Features	Observed		Comment
	Yes	No	
Fill Material		X	Fill is present on the property as described in more detail in the Phase II ESA Report.
Water Wells (agricultural, domestic, monitoring)	X		One tank pit observation well is situated next to the UST on the Triangle Parking Lot. Two groundwater monitoring wells, evidence of prior environmental studies on the property, were observed on the Triangle Parking Lot. These wells are likely identified as MW-1 and MW-5 in the prior reports included in Appendix C.
Pad-Mounted Transformers		X	
Pole-Mounted Transformers	X		Three pole-mounted transformers were observed mounted on one utility pole along the roadway west of the Porsche Property. No “non-PCB” stickers were visible on the devices. No staining was observed on or around the utility pole or ground beneath the devices and therefore the transformers do not constitute RECS for the subject property.
Other Conditions of Environmental Concern		X	According to records at the City of Bellevue, the Barrier Porsche facility includes an underground vehicle exhaust system, which is not considered a potential environmental concern because it is relatively new and typical for large indoor vehicle service operations of this type.

### 2.3.2 Findings

Potential RECs were not identified by this portion of the study with the exception of the following:

- Auto repair/service activities are currently conducted within the Barrier Porsche building. Housekeeping and hazardous materials use, storage and handling practices within the building appear to be good, minimizing the potential for release or spills to the property subsurface. Used hazardous substances such as waste oil and used batteries are disposed or recycled off site. Based on the best management practices (BMPs) in place at the site and because this facility is relatively new not a listed contaminated site, auto service activities on the property are considered a de minimus REC, in our opinion.
- One UST remains on the Triangle Parking Lot and represents a REC. More information regarding this UST and the past history of the site is presented in Section 2.5 below.

### 2.3.3 Data Gaps

Data gaps were not identified by this portion of the study.

## 2.4 Adjacent Property and Vicinity Observations

### 2.4.1 Summary of Observations

We viewed properties located adjacent to and surrounding the subject property on December 15, 2011 and January 12, 2012 from accessible public rights-of-way and the Subject Properties. We did not enter adjacent properties or buildings or buildings except those evaluated for the City of Bellevue for the 120<sup>th</sup> Avenue widening project. The subject property generally is situated in an area that is developed with commercial uses. Section 2.4.2 contains additional details regarding conditions of potential environmental significance observed during our site reconnaissance and a list of potential RECs identified by this portion of our study. Table III below outlines adjacent land uses and pertinent observations with respect to conditions that could pose a REC on the subject property. Figure 2 shows adjacent property uses and locations in relation to the subject property.

**TABLE III. ADJOINING STREETS AND ADJACENT PROPERTIES OBSERVATIONS**

Direction	Adjoining Street	Position Relative to Subject Property <sup>1</sup>	Adjacent Property and Use
North	NE Bellevue-Redmond Road north of Triangle Parking Lot	Down to Crossgradient	Barrier Mercedes and Barrier Motors north of Triangle Parking Lot. Retail (restaurants, salons) north of Barrier Porsche
West	NE Bellevue Redmond Road and NE 8 <sup>th</sup> west of Triangle Property 120 <sup>th</sup> Avenue NE west of Barrier Porsche	Cross to Downgradient	Barrier Mercedes auto sales and service west of Barrier Porsche
East	None	Up to crossgradient	Barrier Pre-Owned sales located east of Triangle Parking Lot. Retail strip mall east of Porsche Property occupied by auto repair and body shop businesses.
South	NE 8 <sup>th</sup> Street south of Triangle Parking Lot NE Bellevue-Redmond Road south of Barrier Porsche	Cross- to Upgradient	Shell gas station to the southeast of Triangle Parking Lot Office building south of Barrier Porsche

Note:

<sup>1</sup> The inferred shallow groundwater flow direction in the vicinity of the subject property is toward the west or northwest, as described in Section 2.2.

### 2.4.2 Findings

One potential REC was identified by this portion of the study:

- Adjacent property uses include auto repair and fueling activities; several of these sites are listed on Ecology databases. More information regarding assessment and cleanup actions on these adjacent properties is presented in Sections 2.5 and 3.0.

### 2.4.3 Data Gaps

Data gaps were not identified by this portion of the study.

## 2.5 Previous Reports

### 2.5.1 Summary of Previous Reports

This section contains a summary of environmental conditions on the subject property and adjacent or nearby properties based on our review of previous environmental reports. The sources of information for this section include Ecology and City of Bellevue files for listings identified in Section 3.0, and the “Hazardous Materials Discipline Report” for the 120<sup>th</sup> Avenue NE Corridor Project (“NE 4<sup>th</sup> Street/120<sup>th</sup> Avenue NE Corridor Project, Hazardous Materials Discipline Report” prepared by Shannon & Wilson, Inc. for City of Bellevue dated July 29, 2011) and its appendices of prior reports. Previous environmental reports for the subject property of this Phase I ESA are listed in Section 7.0.

The Discipline Report was prepared for the 120<sup>th</sup> Avenue NE corridor and presents the findings from a limited review of historical records, Ecology files, and a drive-by “Windshield Survey” for the sites along the corridor. Based on this information, sites along the corridor were screened for potential environmental effects to the project and were ranked for potential risk to the project. The Triangle Parking Lot was identified as “High Risk” and Porsche Property was identified as “Moderate Risk.” The Discipline Report contains additional related environmental reports for the Subject Property that are described below and listed in Section 7.0.

Previous environmental reports for the Triangle Parking Lot and the adjacent Bakker property were identified during our review of regulatory files at Ecology and permit files at the City of Bellevue. Available reports and relevant correspondence we reviewed are listed in Section 7.0 and included in Appendix C. A summary of relevant information is presented below.

#### 2.5.1.1 TRIANGLE PARKING LOT (SUBJECT PROPERTY)

Information regarding the Triangle Parking Lot in the Discipline Report included the following:

- The site was occupied by a gasoline station from at least 1956 through at least 1975 (Gulf Oil, Fletcher Oil and Dubose, Inc.). The property was used by Avis Rent-A-Car as an automobile sales lot beginning in 1976 through approximately 1991. The site is identified on Ecology UST’s, Leaking UST, and Independent Cleanup Report databases as the “Avis Rent-A-Car” site. Based on the UST database information, one UST was removed in 1996 and a second UST was “temporarily closed in place.”
- The original service station USTs were located either north or west of the building and appeared to have been removed prior to 1976, based on test pit exploration and remedial excavation conducted in the early 1990s on behalf of Avis.
- Petroleum-contaminated soil and groundwater were identified in 1989 during the removal of one 5,000-gallon gasoline UST and one previously undocumented 500-gallon waste oil UST,

both located south of the on-site building. Approximately 19 tons of contaminated soil were excavated and reportedly removed for off-site disposal. Petroleum- and benzene-contaminated soil was left in place beneath the building and beneath an underground utility corridor east of the building. A 1989 letter from Ecology recommends “removing the remaining contaminated soil at any time it becomes feasible.”

- A new 5,000-gallon fiberglass UST was reportedly installed in 1989 in the same location as the removed gasoline UST.
- Six monitoring wells were installed on the parcel in 1991 and approximately eight test pits were completed west and north of the previous rental car building. The monitoring well and test pit locations are shown in the Key Maps from Prior Reports, presented at the beginning of Appendix C. The following information is based on the reports documenting the 1991 characterization activities:
  - No remnant USTs from the first generation service station on the property were encountered in the suspect UST areas north and west of the building. Pea gravel, indicative of excavation backfill, was encountered in test pits north and west of the building in the suspect UST locations.
  - Diesel-contaminated soil was identified north of the building. Approximately 130 cubic yards of the impacted soil was removed and transported to a landfill for disposal. Residual soil with diesel (63 milligrams per kilogram [mg/kg]) was left along the northern extent of the excavation(SS-3) at a depth of about 5.5 feet bgs.
  - An elevated concentration of Mineral Spirits (1,400 mg/kg) were detected in a soil sample (SS-8) obtained from the northeast corner of the Triangle Parking Lot parcel at a depth of 6 feet bgs.
  - Groundwater in the north portion of the site contained gasoline, mineral spirits (Stoddard solvent), and benzene at concentrations greater than applicable cleanup levels. The mineral spirits contamination was inferred to have migrated from the dry cleaning facility (Bakker Fine Dry Cleaning Plant) to the east.
  - Elevated concentrations of dry cleaning solvents PCE and TCE, greater than applicable cleanup levels, were detected in a water sample obtained from a drain pipe that was discovered in the excavation and discharged onto the northeast corner of the Triangle parking lot property. The pipe reportedly was connected to floor drains in the dry cleaning building to the east.
  - Concentrations of BETX greater than the MTCA groundwater cleanup levels in place in 1991 were detected in the 1991 groundwater samples from MW-1, MW-3 and MW-6.
  - Concentrations of PCE and TCE greater than the MTCA Method A cleanup levels were detected in one of the 1991 groundwater samples from a monitoring well (MW-1) on the Triangle parking lot. TCE and PCE were not detected in the MW-3 and MW-6 groundwater samples.
  - Two of the monitoring wells installed in 1991 (likely MW-1 and MW-5) are visible on the property currently. The four other previously installed monitoring wells were either paved over or decommissioned.

The site building was demolished in 1999. The remaining 5,000-gallon UST on the property is listed as closed-in-place in Ecology's UST database.

- The Discipline Report concluded that the Triangle Parking Lot was "considered a high risk to the project because: 1) known gasoline- and diesel-range petroleum, benzene, mineral spirits, and chlorinated solvent contamination is present and may be migrating off site; 2) the former gasoline USTs may still be present on site; and 3) the City would acquire this property."

#### **2.5.1.2 BARRIER PORSCHE (SUBJECT PROPERTY)**

Information regarding the Porsche Property in the Discipline Report included the following:

- The site building was constructed in 1969 and was occupied by a bakery until 1996 and remodeled as a car showroom in 2003.
- The Discipline Report concluded that the Porsche Property was "considered a moderate risk to the project because of historical and current use of petroleum products on the site, 10 to 15 feet of excavation is anticipated along the western boundary of this property for a cut wall, and the City anticipates acquiring the property."
- The Discipline Report identifies that the building was historically heated by oil; however, our research for the subject property as discussed in Section 4.0 did not confirm historic oil heat use at the site. Tax archive records for the property and key persons interviewed for this report indicate that the building originally used natural gas and electric heating systems.

#### **2.5.1.3 ADJACENT AND NEARBY PROPERTIES**

The Discipline Report for the 120<sup>th</sup> corridor also included information regarding several adjacent and nearby properties as outlined below. The Discipline Report includes a statement regarding the potential risk posed by each of these properties in relation to the 120<sup>th</sup> Avenue widening project. With respect to this Phase I ESA for the Barrier-owned subject properties, we have included our opinion in Section 2.5.2 as to whether any of these properties would pose a risk of contamination migration and therefore a REC for the Barrier-owned subject properties.

#### ***Former Bakker's Fine Dry Cleaning Plant, 11855 NE Bellevue-Redmond Road***

The Former Bakker Fine Dry Cleaning Plant property is located approximately 80 feet east of the Triangle Parking Lot. This site was originally occupied by a dry cleaning facility from 1959 until at least 2005. The site is now used as a showroom for Barrier Pre-Owned cars.

- Four USTs, presumably installed in the late 1950s or early 1960s, were removed from the site in 1989. The USTs were used to store Stoddard solvent (mineral spirits, 6,000-gallon), diesel fuel (2,000-gallon), distillation (presumed to be spent solvents, 400 or 500 gallons and shown as in active as of 1989), and Solvents (100 or 200 gallons and shown as in active as of 1989). The diesel UST was presumably used for heating oil and the building was converted to natural gas heat at the time. The remaining USTs were used in connection with dry cleaning activities. The four USTs were excavated from a location northeast of the existing building. The tanks were reported to be in good condition with no corrosion, holes or defects. Ten soil samples from the limits of the excavation were analyzed for petroleum by EPA Method 418.1 and one soil sample was analyzed for chlorinated volatile organic compounds (VOCs) by EPA Method

8010. Analytes were either not detected or detected at concentrations less than applicable cleanup levels in place at the time the work was completed.

- A broken 4-inch tile drain line, which was connected to floor drains and the Stoddard tank room within the building, was observed to be discharging into the UST excavation. Anecdotal information indicated that “accidental” spills of Stoddard had occurred in the past at the floor drain location.
- Water seepage reported as “minor” was identified in the UST excavation at approximately 8 feet below ground surface and “discoloration or iridescent sheens” were reportedly observed on the water surface. The water and water-impacted backfill were reported removed during UST excavation activities and additional seepage was not observed. Groundwater samples were not obtained in connection with the 1989 UST removal and broken drain line cleanup activities.
- The 1989 UST removal report concluded that “soil and groundwater proximal to the UST installation were not significantly contaminated” and that “no further characterization...is required.”
- One new 6,000-gallon Stoddard solvent (mineral spirits) UST was installed in 1989 in the same location as the four removed USTs; the tank was removed in 1999. Concentrations of petroleum- and solvent-related contaminants in soil samples from the limits of the 1999 UST excavation were reportedly less than the MTCA Method A cleanup level of 200 parts per million.
- The 1999 UST removal report concluded only that results of the soil samples collected from the excavation area contained concentrations below MTCA Method A cleanup guidelines and did not make any additional conclusions or recommendations regarding additional work at the property..
- Solvents spills associated with poor housekeeping practices were reported for the property. The Discipline Report concluded, “this site is considered high risk due to the relatively high expense of remediating solvent contamination and because the City would acquire the site.”

#### ***Former Dry Cleaner Office Building, 11876 NE 8<sup>th</sup> Street***

The Former Dry Cleaner Office Building property is immediately east of the Triangle Parking Lot and west of the Former Bakker’s Dry Cleaning Plant property (see Figure 2). This property was used as a bank in 1961 and later used as an office building. No dry cleaning is known to have been conducted at the office building property; however, poor housekeeping practices on the adjacent Former Bakker’s Dry Cleaning Plant property were documented and a drain pipe was identified in the past to have discharged solvent-contaminated waste onto this property during previous environmental work associated with the Triangle Parking Lot. The Discipline Report concluded that the dry cleaner office building property is a “moderate risk to the project because it was associated with a contamination source property, has known contamination exiting the western property boundary, and because the City would acquire the site.”

***Barrier Mercedes, 11950 NE Bellevue-Redmond Road***

The Barrier Mercedes site is located approximately 100 feet north and west (downgradient) of the Subject Properties across NE Bellevue-Redmond Road and 120<sup>th</sup> Avenue NE, approximately as shown in Figure 2. The current use of the property includes an automotive service garage. The facility is listed on Ecology's Leaking UST, UST, and Independent Cleanup Report databases. A leaking UST was identified in 1994 and reportedly cleaned up in 1995. In 1996, two additional USTs were removed. Releases of waste oil from broken piping beneath the service garage floor were identified and partially cleaned up in 1994 including removal of approximately 650 gallons of free product (waste oil). Three monitoring wells were installed in 1995 in the service garage area several hundred feet northwest of the subject properties to evaluate the vertical extent of impacted soil and to evaluate whether groundwater was impacted from the waste oil release. The direction of shallow groundwater flow beneath the Barrier Mercedes property was to the northwest, based on data from the 1995 monitoring wells. Localized petroleum-related impacts to soil and groundwater were identified; however, the impacted locations are a several hundred feet downgradient of the subject properties. Based on the reported cleanup complete status of this facility, because the cleanup area is not directly within the road widening area, and because this property is downgradient of the subject property and the road corridor, the Discipline Report concluded that this facility was low risk.

***Shell Service Station, 12001 NE 8<sup>th</sup> Street***

The Shell Service Station site, situated approximately 100 feet south (upgradient) of the Triangle Parking Lot across NE 8<sup>th</sup> Street, has been an operating gas station since 1972. The site is listed on Confirmed and Suspected Contaminated Sites List (CSCSL), Leaking Underground Storage Tank (LUST), Underground Storage Tank (UST), and Voluntary Cleanup Program (VCP) databases. Five fuel USTs were removed in this site in 1996 and three fuel USTs are currently in use at this site. Soil and groundwater contamination resulting from releases from the removed USTs were identified by the early 1990s. Petroleum-contaminated soil and groundwater may remain along the west boundary of this site. Based on this information and that approximately 3 feet of excavation along the west side of the site was proposed for the corridor, the Discipline Report concluded that this site was considered moderate risk.

***Accutint, 12014 NE Bellevue-Redmond Road***

The Accutint facility is located immediately adjacent east of the Porsche Property. The site has been occupied by at least three auto repair shops since 1969 and petroleum products were likely used and stored at the site. This facility is not listed on a database that would indicate presence of contamination and was considered low risk to the corridor.

***Midas Auto Repair, 12020 NE Bellevue-Redmond Road***

The Midas Auto Repair site is located approximately 100 feet east (upgradient) of the Porsche Property. The site has been occupied by at least three auto repair shops since 1969 and petroleum products were likely used and stored at the site. The site is not listed on a database that would indicate presence of contamination and was considered low risk to the corridor.

***Former Printing Company/Auto Repair Shop, 12001 NE 12<sup>th</sup> Street***

The former printing company/auto repair site is located adjacent north (crossgradient) of the Porsche Property. This facility has been occupied by several auto repair, photography, printing, and precious metals plating businesses between approximately 1985 and 2000. Therefore, metals, solvents, and petroleum products were likely used and stored at the site. The site is not listed on databases that would indicate presence of contamination and was considered low risk to the corridor.

***Former VIP Cleaners, 12015 NE 8<sup>th</sup> Street***

The former VIP Cleaners site is located approximately 200 feet southeast of the Triangle Parking Lot across NE 8<sup>th</sup> Street. The site was occupied by a dry cleaner for only a limited time (1985) and was reported to likely be a drop-off location only. The Discipline Report concluded it is therefore unlikely that widespread solvent contamination is associated with this site. The site is not listed on databases that would indicate presence of contamination and therefore this historical business was considered low risk to the corridor.

***Former Priority Publishers, 12000 NE 8<sup>th</sup> Street***

The former Priority Publishers site is located approximately 200 feet south of the Porsche Property across NE Bellevue Redmond Road. The site was occupied by a printing company for only a limited time (1985). The Discipline Report concluded it is therefore unlikely that widespread solvents and metals contamination is associated with this site. The site is not listed on databases that would indicate presence of contamination and therefore this historical business was considered low risk to the corridor.

***Office Building, 12011 NE Bellevue-Redmond Road***

The Office site is located approximately 100 feet southeast of the Porsche Property across NE Bellevue-Redmond Road. The office building site was formerly occupied by a residence heated by oil. Based on distance to the corridor and site redevelopment, and because this site is not listed on databases that would indicate presence of contamination, the Discipline Report concluded that the site was considered low risk to the corridor.

**2.5.2 Findings**

The following potential RECs were identified by this portion of the study:

- Past use of the Triangle Parking Lot (subject property) as a gas station and rental car facility with one remaining UST is considered a REC.
- Presence of residual dry-cleaning solvents in groundwater at the Triangle Parking Lot (subject property) originating from the Former Bakker Fine Dry Cleaning site to the east is considered a REC.
- Possible past use of heating oil at the Porsche Property (subject property) as identified in the 2011 corridor study; however, evidence of past heating oil use at the site was not confirmed by research for this Phase I ESA and therefore is not considered a REC.

Except as noted above, the other adjacent and nearby sites of potential concern identified in the 2011 corridor study Discipline Report are not considered RECs to the Subject Properties based on one or more of the following: the distance between these properties and the subject property makes contaminant migration unlikely, the down- or cross-gradient location in relation to the subject properties makes contaminant migration unlikely, documentation of prior cleanup actions performed at these sites indicates contaminant migration is unlikely, or because the sites are not listed as known or suspected contaminated sites.

### **2.5.3 Data Gaps**

Data gaps were not identified by this portion of the study.

## **3.0 ENVIRONMENTAL RECORDS REVIEW**

### **3.1 Database Search**

GeoEngineers reviewed the results of a search of pertinent environmental regulatory lists and databases for current or previous facilities listed at addresses located within ASTM-specified distances from the subject property. The search was performed on January 11, 2012. The information reviewed was provided by a subcontracted regulatory list search service, Environmental Data Resources, Inc. (EDR). The EDR report is presented in Appendix B. The report includes details regarding the listed facilities identified and maps showing the approximate locations of the listed facilities relative to the subject properties.

GeoEngineers reviewed the search results for listings pertaining to the subject properties. GeoEngineers also reviewed EDR listing of database entries that could not be mapped by EDR because of insufficient addresses (orphans). Off-site facilities found within the specified distances from the subject property were evaluated for potential impact to the subject property.

The subject property (Triangle Parking Lot) was listed as Avis Car Rental/Barrier Motors UST on several Ecology databases. Barrier Porsche was not listed. Table IV below summarizes the listed facilities that in our opinion could pose a REC to the subject property. Other listed facilities identified in Appendix B either are located a significant distance from the subject property or are located in an inferred down- or crossgradient position relative to the subject property and are unlikely to pose a potential environmental concern to the subject property, in our opinion.

**TABLE IV. SUMMARY OF REGULATORY DATABASE SEARCH LISTINGS OF POTENTIAL ENVIRONMENTAL CONCERN**

Location	Listed Business	Listed Address	Regulatory Database	Description
Subject Property (Triangle Parking Lot)	Avis Car Rental aka Barrier Motors UST	11969 NE Bellevue Redmond Road EDR also identifies this site as 11968 NE Bellevue Redmond Road, which appears to be an error	UST, Leaking UST (LUST), Independent Cleanup Report (ICR), Confirmed and Suspected Contaminated Sites List (CSCSL)	According to the EDR report, one UST was removed and one UST was closed-in-place at the site. Release from the UST system was first identified and cleanup action began in 1989. Petroleum, metals, and/or benzene are confirmed at concentrations above cleanup levels in site soil and/or groundwater.
Nearby approximately 100 feet north and west across NE Bellevue-Redmond Road from Triangle Parking Lot and Barrier Porsche	Barrier Motors Mercedes	11950 NE Bellevue-Redmond Road	UST, LUST, ICR, CSCSL	According to the EDR report, two USTs were removed from the site in 1996 and petroleum products related to release from the USTs was cleaned up in the mid-1990s.
Approximately 80 feet east of Triangle Parking Lot (upgradient)	Bakkers Coit Inc.	12002 NE 8 <sup>th</sup> Street/11855 NE 8 <sup>th</sup> Street	Inactive Dry cleaners, UST, CSCSL No Further Action (CSCSL NFA)	See Section 2.5 and 3.1. According to the EDR report, multiple USTs were removed from the former drycleaner site in 1989 and the site was designated as “reported cleaned up” in October 2011.
Nearby (approximately 80 feet south of Triangle Parking Lot across NE 8 <sup>th</sup> Street)	Texaco #0022 aka Shell Station 120546	12001 NE 8 <sup>th</sup>	Spills, ICR, UST, LUST, VCP, CSCSL	According to the EDR report, 5 USTs were removed from the site in the mid-1990s and 4 USTs are currently operational at the site. Releases of petroleum and related compounds were identified in the early 1990s and cleanup and monitoring activities have been completed at the site since that time.

### 3.2 Review of Regulatory Files

We reviewed Ecology’s files for the above-listed properties on November 10, 2011. The discussion in Section 2.5 summarizes the findings in prior reports from Ecology’s file. More recent information

regarding the facilities listed above was not identified during our recent review of Ecology files with the exception of the following.

- Ecology files for the former Bakker's Fine Dry Cleaning site, approximately 80 feet east of the Triangle Parking Lot as shown in Figure 2 contain one significant change relative to the regulatory status for this property as of July 2011. In October 2011, Ecology designated the former Bakker's Fine Dry Cleaning site as "Reported Cleaned Up" (RCU). This designation was based on the prior cleanup action reports submitted to Ecology as part of the independent cleanup action on the property. We understand Ecology will be issuing an administrative No Further Action letter for this property in the near future (see email included in Appendix C). The administrative NFA is different than an NFA Opinion Letter that Ecology issues for sites appropriately cleaned up and entered into Ecology's Voluntary Cleanup Program (VCP). It is our understanding that the prior UST removal and site assessment data were not formally reviewed or evaluated by Ecology and the updated designation as "Reported Cleaned Up" reflects only the conclusion in the reports submitted.

### 3.3 Review of Areawide Contamination Reports

We conducted a search of Ecology and EPA websites for readily available information (publications and reports) that may concern areawide soil and groundwater contamination on or adjacent to the subject property. Areawide contamination reports pertaining to the subject property vicinity were not identified.

### 3.4 Findings

- Additional RECs were not identified by this portion of the study. For clarification, it is important to note that despite Ecology's recent "Reported Cleaned Up" designation for the former Bakker's Fine Dry Cleaning site approximately 80 feet to the east, it is our opinion that releases on this property may have migrated to the Triangle Parking Lot property and impacted soil, groundwater and/or soil vapor conditions on the Triangle Parking Lot property. Therefore the former dry cleaning site is considered a REC for the subject property and because of the volatile nature of dry cleaning contaminants, the nearby site is also considered a vapor intrusion REC for the Triangle parking lot subject property.

### 3.5 Data Gaps

Data gaps as defined by the AAI Rule and ASTM standard were not identified by this portion of the study. For clarification, we note that Phase I ESA data gaps are defined differently than the terminology "site characterization data gaps" used in Phase II ESA and Remedial Investigation (RI) reports. There are site characterization data gaps in connection with the subject properties in our opinion because the extent of contaminant migration from releases associated with the former on-site service station/car rental and eastern former dry cleaner plant have not been fully defined.

## 4.0 PROPERTY HISTORY

### 4.1 Historical Resources

Our understanding of the history of the subject property is based on a review of the information from the historical resources listed in Table V and interviews with the individuals listed. Selected historical research documents are included in Appendix B.

**TABLE V. HISTORICAL RESOURCES REVIEWED**

Description	Provider or Interviewee	Dates of Coverage or Dates of Knowledge of the Property	Date Reviewed or Contacted	Comment (See Section 4.2 for findings)
Historical Aerial Photographs <sup>1</sup>	Environmental Data Resources, Inc. (EDR)	1965, 1977, 1981, 1985, 1990, 2005, and 2006	01/12/2012	
Historical Aerial Photographs <sup>1</sup>	King County iMAP	1936, 1998, 2000, 2002, 2005, and 2007	10/14/2011	
Historical Fire Insurance Maps	EDR	None	01/11/2012	Sanborn maps do not cover the subject property vicinity.
Historical Tax Assessors Records	Washington State Archives	1938 to 1973	10/14/2011	Archived King County assessor records for the subject property were obtained from Puget Sound Regional Archives.
Historical City Directories	EDR search at public libraries	1966, 1972, 1977, 1983, and 1996	01/12/2012	
Historical City Directories	GeoEngineers search at Puget Sound Regional Archives	1983 to 1984	11/10/2011	
Historical Topographic Maps	EDR search	1897, 1950, 1968, 1973, and 1983	01/11/2012	
Historical City Atlases	GeoEngineers search of Kroll Atlases	Circa 1940s, circa 1960, and circa late 1990s	11/10/2011	
Building Department Records	City of Bellevue Permit Lookup Online	Approximately 2000 to recent	01/11/2012	

Description	Provider or Interviewee	Dates of Coverage or Dates of Knowledge of the Property	Date Reviewed or Contacted	Comment (See Section 4.2 for findings)
Building and Fire Department Records	City of Bellevue, Kristina Thurstonson, City of Bellevue Public Disclosure Analyst	Recent	04/17/2012	See below. According to Ms. Thurstonson, the Porsche Property has fire operational permits for auto repair garage, hazardous materials storage, and flammable liquids.
Commitment for Title Insurance	First American Title	February 23, 2011 and April 17, 2012	5/11/2012	
Interview	Gregg Prokop, Barrier Mercedes manager and 'key site manager'	Approximately 1980 to present	12/16/2011	
Interview	Michael Mauk, Barrier facilities manager and 'key site manager'	Approximately 1981 to present	12/14/2011 and 01/17/2012	
Interview	Seattle-King County Health Department	Recent	02/28/2012	SKCHD indicated they did not have files or records concerning the subject property.

Note:

<sup>1</sup> The scale of the photographs reviewed allowed for an interpretation of general property development/configuration, such as identifying most structures, roadways and clearings. However, the scale of the photographs did not allow for identification of specific property features, such as fuel pumps, wells or chemical storage areas on the subject property, if any.

## 4.2 Historical Property Ownership and Use Summary

### 4.2.1 Triangle Parking Lot.

The available historical sources indicate that Jimmy Barrier purchased the Triangle Parking Lot from Avis Rent-a-Car in 1992. Based on ownership information included on archived tax assessor documents, the property was owned by Fletcher Oil Company in 1956 and by Avis Rent-a-Car in the late 1970s and 1980s.

The subject property appears undeveloped and as a portion of a grassy field in a 1936 aerial photograph. The first identified developed use of the property is the construction of a small gas station in 1956. Archived tax assessor documents for the original gas station show that the station improvements included two pump islands and one hydraulic hoist inside the station building. Gas tank information for the station is illegible on the available assessor document. The building

was heated by an electric system. The gas station facility is visible only on the 1965 aerial photograph.

In the mid-1970s, the property was purchased by Avis Rent-a-Car. The original service station structures were removed prior to construction of a new building for Avis in 1977. Based on archived tax assessor documents, the Avis building included a wash bay and service area in addition to a small office space. The Avis facility included one 5,000 gallon fuel UST.

As discussed in Section 2.5, USTs were previously removed from the site. One closed-in-place UST is reportedly present at the property. The Avis building was demolished in 2002 and property use was established as a parking lot for Barrier car sales.

#### **4.2.2 Porsche Property**

The available historical sources indicate that Jimmy Barrier purchased the Porsche Property from Katherine Brenner in 1996. Based on ownership information included on archived tax assessor documents, the property was owned by members of the Brenner family from at least the mid-1960s.

The subject property appears developed with a small house and barn, as a portion of a larger farm property, in a 1936 aerial photograph. No information was available from readily-available sources regarding this first identified use of the property. The house and barn are removed and portions of the property appear regraded in a 1965 aerial photograph.

The existing building was built in 1969. The building operated as Brenner Brothers bakery from construction until the 1990s. Archived tax assessor documents for the bakery show that the building was heated by electric and natural gas systems and had sales and restaurant space as well as a large bakery space. No tanks are indicated on the available tax assessor documents.

The existing building was extensively renovated in the early 2000s for use as new car sales and service by Barrier Motors. Renovations included addition of new building fascia on the exterior, modification of the existing storefront, and additional doors and building system upgrades.

#### **4.2.3 Key Person Interviews**

We interviewed Gregg Prokop, Barrier Mercedes manager, and Michael Mauk, Barrier Motors facilities manager, regarding the subject property. Mr. Prokop and Mr. Mauk do not have any additional information regarding underground storage tanks at the subject property beyond that discussed in Section 2.5 and are not aware of any hazardous materials use, storage, spills, or disposal at the subject property. They additionally are not aware of any information regarding past assessment information at the Subject Properties.

According to Mr. Mauk, Barrier Porsche service department uses two 1,000-gallon ASTs located within secondary containment for waste oil and new oil. Waste oil is removed by a recycling company as necessary. Hoists located in the service department are self-contained units located in shallow concrete-lined vaults. Drains located within the service department drain to an oil/water separator in the northwest corner of the property that is cleaned annually. Mr. Mauk stated that he thought the building has been heated by natural gas and electric heating systems since

construction. Mr. Mauk additionally stated that Barrier Motors may have contact information for the previous property owner (Brenner Family) and will provide that information to us when it is located.

### 4.3 Adjacent Properties

Adjacent properties generally were developed for commercial purposes beginning in the 1940s and 1950s. Additional environmental information for several nearby and adjacent properties is included in Section 2.5 above.

**North.** Adjacent buildings to the north of Porsche Property were built in 1975. Current occupants in tenant spaces closest to the subject property are restaurants and retail stores. Past occupants of this building have included engravers, auto repair, and metal plating as discussed in Section 2.5.

**East.** Adjacent strip mail buildings to the east of the Porsche Property were built in 1970. Several auto repair and auto body companies are currently located in these buildings and are typical of past building tenants.

Properties to the east of the Triangle Parking Lot were formerly part of a Bakker's Fine Dry Cleaning plant, as discussed in Section 2.5. A small office building, originally a bank, was built on the immediately-adjacent property in 1961. The small office building was demolished in approximately 2002. The property east of the former office building property contains one building built in 1959, which operated as a dry cleaning plant until the late 1990s; this building was remodeled in 2001 and 2002 for use as an auto showroom by Barrier Motors.

**West.** The existing Barrier Mercedes sales and service facility was built in sections between the 1970s and 1990s. The building has been used by Barrier Motors since at least 1985. The property appears undeveloped in 1936 and 1965 aerial photographs.

**South.** The existing Shell service station to the south across NE 8<sup>th</sup> Street was built in 1990 and replaced an older station that was built in the early 1970s. The property appears undeveloped in aerial photographs dated 1936 and 1965.

### 4.4 Environmental Liens or Property Use Restrictions

During the course of our research, we did not find that environmental liens had been filed against the subject property. Activity Use Restrictions, Restrictive Covenants or Environmental Covenants were not identified on the title report reviewed.

### 4.5 Information Provided by User/User Obligations

We did not receive any responses to a user questionnaire, a copy of which is provided in Appendix A. The questionnaire can be used to obtain user-provided information (for example, title records, environmental liens, specialized knowledge of the subject property, etc.) that may specify findings/conditions that may pose potential environmental concerns or RECs relative to the subject property. The absence of this information represents a data gap.

## 4.6 Findings

Additional RECs beyond those previously noted in prior sections of this Phase I ESA were not identified by this portion of the study.

## 4.7 Data Gaps

Two data gaps were identified by this portion of the study:

- As of the date of this report, we have been unable to identify contact information for the previous property owner of the Barrier Porsche property to conduct an interview regarding the possibility of historic heating oil storage at this building.
- We did not receive a copy of the completed User Questionnaire for the Subject Property. This data gap is not considered significant for the purposes of this Phase I ESA. .

## 5.0 CONCLUSIONS AND RECOMMENDATIONS

GeoEngineers has performed a Phase I ESA in general conformance with the scope and limitations of ASTM Practice E 1527-05 of the two parcels owned by Jimmy Barrier located at 11866 NE 8<sup>th</sup> Street and 12000 NE Bellevue-Redmond Road in Bellevue, Washington. The City of Bellevue plans to purchase these two properties for the NE 8<sup>th</sup> to NE 12<sup>th</sup> segment of the 120<sup>th</sup> Avenue NE widening project. Any exceptions to, or deletions from, this practice are described in Section 1.2 of this report. This assessment has revealed no evidence of RECs in connection with the subject property with the exception of the following:

### 5.1 Triangle Parking Lot

- Past use of the Triangle Parking Lot (subject property) as a gas station and rental car facility is considered a REC. Releases of petroleum and related compounds have been documented at the site. Some previous USTs and impacted soils were removed; however, residual petroleum-impacted soils and at least one UST remains in-place at the site. These former facilities also constitute a vapor intrusion REC for indoor air or confined spaces based on the potential for residual volatile contaminants in soil, groundwater and/or soil vapor. We note that this property remains a listed contaminated site (status “cleanup started”) in Ecology’s databases. Two monitoring wells installed during prior studies and one tank pit observation well remain on the property; however the condition of these wells was not evaluated for this Phase I ESA.
- The reported presence of dry-cleaning solvents at the Triangle Parking Lot originating from releases associated with the former Bakker Fine Dry Cleaning site approximately 80 feet to the east is considered a REC for the subject property. Dry cleaning solvents PCE, TCE, and mineral spirits (Stoddard solvent) have been documented in soil and/or groundwater at concentrations greater than corresponding MTCA Method A cleanup levels. These conditions also constitute a vapor intrusion REC for indoor air or confined spaces based on the potential for residual volatile contaminants in soil, groundwater and/or soil vapor.

### 5.2 Barrier Porsche Property

- Auto repair/service activity currently conducted within the Barrier Porsche building is considered a de minimus REC. Housekeeping and hazardous materials use, storage and

handling practices within the building appear to be good, minimizing the potential for release or spills to the property subsurface. In addition, this facility is relatively new and is not a listed contaminated site in Ecology or regulatory files.

One data gap of potential significance was identified for the Barrier Porsche Property: the possibility of historical heating oil use could not be confirmed or denied due to inability to locate prior owners and lack of relevant building heating source records at the City.

### 5.3 Recommendations

A geophysics study and Phase II ESA to evaluate soil and groundwater conditions within the planned future right of way of 120<sup>th</sup> Avenue NE has been completed and will be reported separately.

## 6.0 LIMITATIONS

This Phase I ESA has been prepared for use by the City of Bellevue and PB. GeoEngineers has performed this Phase I ESA of the two parcels owned by Jimmy Barrier located at 11866 NE 8<sup>th</sup> Street and 12000 NE Bellevue-Redmond Road in Bellevue, Washington, in general accordance with the scope and limitations of Contract Amendment No. 2 to Agreement No. PW-R164, ASTM E 1527-05, Standard Practice for Phase I ESAs and EPA's Federal Standard 40 CFR Part 312 "Standards and Practices for All Appropriate Inquiries (AAI)."

Within the limitations of scope, schedule and budget, our services have been executed in accordance with the generally accepted environmental science practices for Phase I ESAs in this area at the time this report was prepared. No warranty or other conditions, express or implied, should be understood.

Please refer to Appendix E titled "Report Limitations and Guidelines for Use" for additional information pertaining to use of this report.

In order to qualify for one of the federal landowner liability protections, and to enable us to fully address the objectives of the Phase I ESA, please complete the questionnaire below and provide the additional information requested.

1. Are you aware of any environmental cleanup liens against the subject property that are filed or recorded under federal, tribal and state or local law?  
 YES  NO  DON'T KNOW Explain:
2. Are you aware of any Activity and Use Limitations (AULs), such as engineering controls, land use restrictions or institutional controls, that are in place at the subject property and/or have been filed or recorded in a registry under federal, tribal, state or local law?  
 YES  NO  DON'T KNOW Explain:
3. As the user of this Phase I ESA, do you have any specialized knowledge or experience related to the subject property or nearby properties? For example are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?  
 YES  NO  DON'T KNOW Explain:
4. Does the purchase price being paid for the subject property reasonable reflect the fair market value of the property?  
 YES  NO  DON'T KNOW Explain:
- a. If you conclude that there is a difference and you answered NO above, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?  
 YES  NO  DON'T KNOW Explain:
5. Are you aware of commonly known or reasonably ascertainable information about the subject property that would help us identify conditions indicative or releases or threatened releases? For example,
  - a. Do you know the past uses of the property?  
 YES  NO  DON'T KNOW Explain:
  - b. Do you know of specific chemicals that are present or once were present on the property?  
 YES  NO  DON'T KNOW Explain:
  - c. Do you know of spills or other chemical releases that have taken place at the property?  
 YES  NO  DON'T KNOW Explain:
  - d. Do you know of any environmental cleanups that have taken place at the property?  
 YES  NO  DON'T KNOW Explain:
6. Based on your knowledge and experience related to the subject property, are there any obvious indicators that point to the presence or likely presence of contamination at the property?  
 YES  NO  DON'T KNOW Explain:

User Questionnaire Completed By (Name and Organization): \_\_\_\_\_

Date: \_\_\_\_\_

List of Requested Information, If Available

- Names and phone numbers of key individuals with knowledge of property use history.
- A map showing the boundaries of the subject property.
- Tax ID numbers for parcels included within the subject property.
- Copies of any past environmental site assessment and/or audit reports or risk assessment studies.
- Environmental permits.
- Registrations for underground and aboveground storage tanks (if any).
- Material data safety sheets for hazardous substances used or stored on-site (if any).
- Community right-to-know plans pertaining to the subject property.
- Safety plans pertaining to on-site facilities.
- Reports regarding geotechnical and/or hydrogeologic conditions at or near the subject property.
- Notices or other correspondence from any governmental agency relating to past or current violations of environmental laws with respect to the subject property or relating to environmental liens encumbering the property.
- Recorded Activity Use Limitations (AULs)

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### TARGET PROPERTY INFORMATION

#### ADDRESS

120TH AVENUE NE/NE BELLEVUE REDMOND ROAD  
BELLEVUE, WA 98005

#### COORDINATES

Latitude (North): 47.6183000 - 47° 37' 5.88"  
Longitude (West): 122.1794000 - 122° 10' 45.84"  
Universal Transverse Mercator: Zone 10  
UTM X (Meters): 561665.0  
UTM Y (Meters): 5273984.5  
Elevation: 156 ft. above sea level

### USGS TOPOGRAPHIC MAP ASSOCIATED WITH TARGET PROPERTY

Target Property Map: 47122-E2 MERCER ISLAND, WA

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### STANDARD ENVIRONMENTAL RECORDS

#### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/15/2011 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<b><i>BAKKERS COIT INC</i></b>	<b><i>12002 NE 8TH</i></b>	<b><i>SW 0 - 1/8 (0.078 mi.)</i></b>	<b><i>10</i></b>	<b><i>21</i></b>

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/15/2011 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
AURORA IMPROVEMENT COMPANY	12130 BEL RED RD	ENE 0 - 1/8 (0.047 mi.)	B5	13

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 06/15/2011 has revealed that there are 6 RCRA-CESQG sites within approximately 0.25 miles of the target property.

### **State- and tribal - equivalent NPL**

HSL: The Hazardous Sites List is a subset of the CSCSL Report. It includes sites which have been assessed and ranked using the Washington Ranking Method (WARM).

A review of the HSL list, as provided by EDR, and dated 08/31/2011 has revealed that there is 1 HSL site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<b>TIKI CAR WASH</b> Facility Type: Hazardous Sites List	<b>11909 NE 8TH ST</b>	<b>WSW 1/8 - 1/4 (0.164 mi.)</b>	<b>H31</b>	<b>92</b>

### **State- and tribal - equivalent CERCLIS**

CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the CSCSL list, as provided by EDR, and dated 10/25/2011 has revealed that there are 27 CSCSL sites within approximately 1 mile of the target property.

### State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Ecology's Leaking Underground Storage Tanks Site List.

A review of the LUST list, as provided by EDR, and dated 11/22/2011 has revealed that there are 14 LUST sites within approximately 0.5 miles of the target property.

### **State and tribal registered storage tank lists**

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Ecology's Statewide UST Site/Tank Report.

A review of the UST list, as provided by EDR, and dated 11/22/2011 has revealed that there are 11 UST sites within approximately 0.25 miles of the target property.

CSCSL NFA: The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the CSCSL NFA list, as provided by EDR, and dated 10/25/2011 has revealed that there are 14 CSCSL NFA sites within approximately 0.5 miles of the target property.

### **Other Ascertainable Records**

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 06/15/2011 has revealed that there are 10 RCRA-NonGen sites within approximately 0.25 miles of the target property.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Actual Status Date: 8/6/1996  
Tag Number: A0440

Tank ID: 4746  
Tank Name: 6  
Install Date: 1/1/1990  
Capacity: 5,000 to 9,999 Gallons  
Tank Upgrade Date: 2/9/1998  
TankSystem Status: Operational  
TankSystem Status Change Date: 8/26/1996  
Tank Status: Operational  
Tank Permit Expiration Date: 8/31/2012  
Tank Closure Date: 1/1/0001  
Tank Pumping System: Pressurized System  
Tank Spill Prevention: Spill Bucket/Spill Box  
Tank Overfill Prevention: Ball Float Valve (vent line)  
Tank Material: Fiberglass Reinforced Plastic  
Tank Construction: Double Wall Tank  
Tank Tightness Test: Part of Automatic Tank Gauging (ATG) System  
Tank Corrosion Protection: Corrosion Resistant  
Pipe Material: Fiberglass  
Pipe Construction: Double Wall Pipe  
Pipe Primary Release Detection: Automatic Line Leak Detection  
Pipe Second Release Detection: Interstitial Monitoring (sump sensor)

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

**FINDS:**

Registry ID: 110009511910

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**HAZARDOUS WASTE BIENNIAL REPORTER**

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit

Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Hazardous Waste Summary:

Waste code: WSQG  
Waste name: A placeholder to allow BR submission to validate. In WA State, Conditionally Exempt Small Quantity Generators (Called SQG in WA) are not required to report waste streams, so no valid State or Fed codes are available for reporting to BR.

Waste code: WT02  
Waste name: Washington State Dangerous Toxic Waste with a toxic constituents concentration greater than or equal to 0.001% and less than 1.0%, determined by biological testing methods or a book designation procedure.

Violation Status: No violations found

Evaluation Action Summary:

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Pipe Primary Release Detection: Automatic Line Leak Detection  
Pipe Second Release Detection: Not reported  
Pipe Corrosion Protection: Corrosion Resistant  
Tank Primary Release Detection: Interstitial Monitoring  
Tank Second Release Detection: Not reported  
Pipe Tightness Test: Not reported  
Tank Actual Status Date: 8/6/1996  
Tag Number: A0746

Tank ID: 39106  
Tank Name: 3R  
Install Date: 8/15/1991  
Capacity: 10,000 to 19,999 Gallons  
Tank Upgrade Date: 8/15/1991  
TankSystem Status: Removed  
TankSystem Status Change Date: 4/7/2004  
Tank Status: Removed  
Tank Permit Expiration Date: 9/30/2000  
Tank Closure Date: 11/26/2001  
Tank Pumping System: Pressurized System  
Tank Spill Prevention: Spill Bucket/Spill Box  
Tank Overfill Prevention: Ball Float Valve (vent line)  
Tank Material: Fiberglass Reinforced Plastic  
Tank Construction: Double Wall Tank  
Tank Tightness Test: Not reported  
Tank Corrosion Protection: Corrosion Resistant  
Pipe Material: Fiberglass  
Pipe Construction: Double Wall Pipe  
Pipe Primary Release Detection: Automatic Line Leak Detection  
Pipe Second Release Detection: Not reported  
Pipe Corrosion Protection: Corrosion Resistant  
Tank Primary Release Detection: Interstitial Monitoring  
Tank Second Release Detection: Not reported  
Pipe Tightness Test: Not reported  
Tank Actual Status Date: 8/6/1996  
Tag Number: A0746

**FINDS:**

Registry ID: 110005359815

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Hazardous Waste Summary:**

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002  
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D008  
Waste name: LEAD

Waste code: U010  
Waste name: AZIRINO[2',3':3,4]PYRROLO[1,2-A]INDOLE-4,7-DIONE, 6-AMINO-8-[[[(AMINOCARBONYL)OXY]METHYL]-1,1A,2,8,8A,8B-HEXAHYDRO-8A-METHOXY-5-METHYL-, [1AS-(1AALPHA, 8BETA,8AALPHA,8BALPHA)]-

Waste code: WSC2  
Waste name: Washington State solid or semisolid corrosive Dangerous Waste with a pH less than or equal to 2, or greater than or equal to 12.5, based upon a specific testing method.

Waste code: WT01  
Waste name: Washington State Extremely Hazardous Toxic Waste with a toxic constituents concentration greater than or equal to 1.0%, determined by biological testing methods or a book designation procedure.

Waste code: WT02  
Waste name: Washington State Dangerous Toxic Waste with a toxic constituents concentration greater than or equal to 0.001% and less than 1.0%, determined by biological testing methods or a book designation procedure.

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCES (National Center for Education Statistics) is the primary federal entity for collecting and analyzing data related to education in the United States and other nations and the institute of education sciences.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Form Comm: Overlake Hospital had a single pickup of a bottle of extremely hazardous waste (P105, 10 lbs) in 2007 that caused it to designate as an LQG. The hospital was an MQG in 2006 and expects to designate as an MQG in 2008. Therefore, the hospital will operate and manage its dangerous waste as an MQG.

Tank Primary Release Detection: Not reported  
Tank Second Release Detection: Not reported  
Pipe Tightness Test: Not reported  
Tank Actual Status Date: 8/6/1996  
Tag Number: A5069

Tank ID: 528675  
Tank Name: VI  
Install Date: 12/1/1999  
Capacity: Not reported  
Tank Upgrade Date: 12/1/1999  
TankSystem Status: Removed  
TankSystem Status Change Date: 8/25/2006  
Tank Status: Removed  
Tank Permit Expiration Date: 6/30/2007  
Tank Closure Date: 1/1/0001  
Tank Pumping System: Suction System Tank Check Valve  
Tank Spill Prevention: Spill Bucket/Spill Box  
Tank Overfill Prevention: Automatic Shutoff (fill pipe)  
Tank Material: Coated Steel  
Tank Construction: Double Wall Tank  
Tank Tightness Test: Not Performed  
Tank Corrosion Protection: Sacrificial Anode  
Pipe Material: Flexible Piping  
Pipe Construction: Double Wall Pipe  
Pipe Primary Release Detection: Interstitial Monitoring (sump sensor)  
Pipe Second Release Detection: Not reported  
Pipe Corrosion Protection: Corrosion Resistant  
Tank Primary Release Detection: Automatic Tank Gauging  
Tank Second Release Detection: Not reported  
Pipe Tightness Test: No  
Tank Actual Status Date: 3/23/2000  
Tag Number: A5069

Hazardous Waste Summary:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSLEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002  
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D005  
Waste name: BARIUM

Waste code: D006  
Waste name: CADMIUM

Waste code: D007  
Waste name: CHROMIUM

Waste code: D008  
Waste name: LEAD

**FINDS:**

Registry ID: 110012563092

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Conditionally Exempt Small Quantity Generators (Called SQG in WA) are not required to report waste streams, so no valid State or Fed codes are available for reporting to BR.

Violation Status: No violations found

**FINDS:**

Registry ID: 110005304955

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**HAZARDOUS WASTE BIENNIAL REPORTER**

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

**Hazardous Waste Summary:**

Waste code: WSQG  
Waste name: A placeholder to allow BR submission to validate. In WA State, Conditionally Exempt Small Quantity Generators (Called SQG in WA) are not required to report waste streams, so no valid State or Fed codes are available for reporting to BR.

Violation Status: No violations found

**Evaluation Action Summary:**

Evaluation date: 11/20/2006  
Evaluation: FOCUSED COMPLIANCE INSPECTION  
Area of violation: Not reported  
Date achieved compliance: Not reported  
Evaluation lead agency: State

Evaluation date: 11/05/1997  
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE  
Area of violation: Not reported  
Date achieved compliance: Not reported

**FINDS:**

Registry ID: 110009511073

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**HAZARDOUS WASTE BIENNIAL REPORTER**

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource

Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

CSCSL:

Facility ID: 2462690  
 Region: Northwest  
 Lat/Long: 47.617603000000 / -122.198733  
 Brownfield Status: Not reported  
 Rank Status: Not reported

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Owner/Operator Type: Operator  
Owner/Op start date: 01/01/1900  
Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No  
Mixed waste (haz. and radioactive): No  
Recycler of hazardous waste: No  
Transporter of hazardous waste: No  
Treater, storer or disposer of HW: No  
Underground injection activity: No  
On-site burner exemption: No  
Furnace exemption: No  
Used oil fuel burner: No  
Used oil processor: No  
User oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 06/30/2011	Source: EPA
Date Data Arrived at EDR: 07/12/2011	Telephone: N/A
Date Made Active in Reports: 09/29/2011	Last EDR Contact: 01/11/2012
Number of Days to Update: 79	Next Scheduled EDR Contact: 04/23/2012
	Data Release Frequency: Quarterly

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 06/30/2011	Source: EPA
Date Data Arrived at EDR: 07/12/2011	Telephone: N/A
Date Made Active in Reports: 09/29/2011	Last EDR Contact: 01/11/2012
Number of Days to Update: 79	Next Scheduled EDR Contact: 04/23/2012
	Data Release Frequency: Quarterly

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ***Federal Delisted NPL site list***

### DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 06/30/2011	Source: EPA

## ***Federal CERCLIS list***

### CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/25/2011	Source: EPA
Date Data Arrived at EDR: 03/01/2011	Telephone: 703-412-9810
Date Made Active in Reports: 05/02/2011	Last EDR Contact: 11/29/2011
Number of Days to Update: 62	Next Scheduled EDR Contact: 03/12/2012
	Data Release Frequency: Quarterly

### FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 12/10/2010	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/11/2011	Telephone: 703-603-8704
Date Made Active in Reports: 02/16/2011	Last EDR Contact: 10/14/2011
Number of Days to Update: 36	Next Scheduled EDR Contact: 01/23/2012
	Data Release Frequency: Varies

## ***Federal CERCLIS NFRAP site List***

### CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 02/25/2011	Source: EPA
Date Data Arrived at EDR: 03/01/2011	Telephone: 703-412-9810
Date Made Active in Reports: 05/02/2011	Last EDR Contact: 11/29/2011
Number of Days to Update: 62	Next Scheduled EDR Contact: 03/12/2012
	Data Release Frequency: Quarterly

## ***Federal RCRA CORRACTS facilities list***

### CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ***Federal RCRA non-CORRACTS TSD facilities list***

### **RCRA-TSDF: RCRA - Treatment, Storage and Disposal**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/15/2011  
Date Data Arrived at EDR: 07/07/2011

## ***Federal RCRA generators list***

### **RCRA-LQG: RCRA - Large Quantity Generators**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/15/2011  
Date Data Arrived at EDR: 07/07/2011  
Date Made Active in Reports: 08/08/2011  
Number of Days to Update: 32

Data Release Frequency: Quarterly

### **RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/15/2011  
Date Data Arrived at EDR: 07/07/2011

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ***Federal institutional controls / engineering controls registries***

### **US ENG CONTROLS: Engineering Controls Sites List**

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 12/30/2011	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/30/2011	Telephone: 703-603-0695
Date Made Active in Reports: 01/10/2012	Last EDR Contact: 12/09/2011
Number of Days to Update: 11	Next Scheduled EDR Contact: 03/26/2012
	Data Release Frequency: Varies

### **US INST CONTROL: Sites with Institutional Controls**

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 12/30/2011	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/30/2011	Telephone: 703-603-0695
Date Made Active in Reports: 01/10/2012	Last EDR Contact: 12/09/2011
Number of Days to Update: 11	Next Scheduled EDR Contact: 03/26/2012
	Data Release Frequency: Varies

## ***Federal ERNS list***

### **ERNS: Emergency Response Notification System**

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 10/03/2011	Source: National Response Center, United States Coast Guard
Date Data Arrived at EDR: 10/04/2011	Telephone: 202-267-2180
Date Made Active in Reports: 11/11/2011	Last EDR Contact: 01/06/2012
Number of Days to Update: 38	Next Scheduled EDR Contact: 04/16/2012
	Data Release Frequency: Annually

## ***State- and tribal - equivalent NPL***

### **HSL: Hazardous Sites List**

The Hazardous Sites List is a subset of the CSCSL Report. It includes sites which have been assessed and ranked using the Washington Ranking Method (WARM).

Date of Government Version: 08/31/2011	Source: Department of Ecology
Date Data Arrived at EDR: 09/22/2011	Telephone: 360-407-7200
Date Made Active in Reports: 11/10/2011	Last EDR Contact: 12/12/2011
Number of Days to Update: 49	Next Scheduled EDR Contact: 03/26/2012
	Data Release Frequency: Semi-Annually

## ***State- and tribal - equivalent CERCLIS***

### **CSCSL: Confirmed and Suspected Contaminated Sites List**

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 10/25/2011	Source: Department of Ecology
Date Data Arrived at EDR: 10/27/2011	Telephone: 360-407-7200
Date Made Active in Reports: 12/06/2011	Last EDR Contact: 10/27/2011
Number of Days to Update: 40	Next Scheduled EDR Contact: 02/06/2012
	Data Release Frequency: Semi-Annually

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ***State and tribal landfill and/or solid waste disposal site lists***

### SWF/LF: Solid Waste Facility Database

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 10/11/2011	Source: Department of Ecology
Date Data Arrived at EDR: 10/11/2011	Telephone: 360-407-6132
Date Made Active in Reports: 11/10/2011	Last EDR Contact: 12/12/2011
Number of Days to Update: 30	Next Scheduled EDR Contact: 03/26/2012
	Data Release Frequency: Annually

## ***State and tribal leaking storage tank lists***

### LUST: Leaking Underground Storage Tanks Site List

Leaking Underground Storage Tank Incident Reports. LUST records contain an inventory of reported leaking underground storage tank incidents. Not all states maintain these records, and the information stored varies by state.

Date of Government Version: 11/22/2011	Source: Department of Ecology
Date Data Arrived at EDR: 11/23/2011	Telephone: 360-407-7183
Date Made Active in Reports: 12/08/2011	Last EDR Contact: 11/23/2011
Number of Days to Update: 15	Next Scheduled EDR Contact: 03/05/2012

## **State and tribal Brownfields sites**

### BROWNFIELDS: Brownfields Sites Listing

A listing of brownfields sites included in the Confirmed & Suspected Sites Listing. Brownfields are abandoned, idle or underused commercial or industrial properties, where the expansion or redevelopment is hindered by real or perceived contamination. Brownfields vary in size, location, age, and past use -- they can be anything from a five-hundred acre automobile assembly plant to a small, abandoned corner gas station.

Date of Government Version: 10/25/2011  
Date Data Arrived at EDR: 10/27/2011

Next Scheduled EDR Contact: 02/06/2012  
Data Release Frequency: Varies

## **ADDITIONAL ENVIRONMENTAL RECORDS**

### **Local Brownfield lists**

#### US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

## **Local Lists of Hazardous waste / Contaminated Sites**

### US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 10/07/2011  
Date Data Arrived at EDR: 12/09/2011  
Date Made Active in Reports: 01/10/2012  
Number of Days to Update: 32

Data Release Frequency: Quarterly

### CSCSL NFA: Confirmed and Contaminated Sites - No Further Action

The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead, a No Further Action code is entered based upon the type of NFA determination the site received.

## **Other Ascertainable Records**

### RCRA-NonGen: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

Date of Government Version: 06/15/2011	Source: Environmental Protection Agency
Date Data Arrived at EDR: 07/07/2011	Telephone: (206) 553-1200

### FUDS: Formerly Used Defense Sites

The listing includes locations of Formerly Used Defense Sites properties where the US Army Corps of Engineers is actively working or will take necessary cleanup actions.

Date of Government Version: 12/31/2009	Source: U.S. Army Corps of Engineers
Date Data Arrived at EDR: 08/12/2010	Telephone: 202-528-4285
Date Made Active in Reports: 12/02/2010	Last EDR Contact: 12/09/2011
Number of Days to Update: 112	Next Scheduled EDR Contact: 03/26/2012
	Data Release Frequency: Varies

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## CONSENT: Superfund (CERCLA) Consent Decrees

Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by United States District Courts after settlement by parties to litigation matters.

Date of Government Version: 09/01/2011	Source: Department of Justice, Consent Decree Library
Date Data Arrived at EDR: 11/18/2011	Telephone: Varies
Date Made Active in Reports: 01/10/2012	Last EDR Contact: 12/27/2011
Number of Days to Update: 53	Next Scheduled EDR Contact: 04/16/2012
	Data Release Frequency: Varies

## ROD: Records Of Decision

Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 09/28/2011	Source: EPA
Date Data Arrived at EDR: 12/14/2011	Telephone: 703-416-0223
Date Made Active in Reports: 01/10/2012	Last EDR Contact: 12/14/2011
Number of Days to Update: 27	Next Scheduled EDR Contact: 03/26/2012
	Data Release Frequency: Annually

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

Date of Government Version: 09/14/2010	Source: Department of Energy
Date Data Arrived at EDR: 10/21/2010	Telephone: 505-845-0011

Number of Days to Update: 99	Next Scheduled EDR Contact: 03/12/2012
	Data Release Frequency: Varies

## MINES: Mines Master Index File

Contains all mine identification numbers issued for mines active or opened since 1971. The data also includes violation information.

Date of Government Version: 08/18/2011	Source: Department of Labor, Mine Safety and Health Administration
Date Data Arrived at EDR: 09/08/2011	Telephone: 303-231-5959
Date Made Active in Reports: 09/29/2011	Last EDR Contact: 12/07/2011
Number of Days to Update: 21	Next Scheduled EDR Contact: 03/19/2012
	Data Release Frequency: Semi-Annually

## TRIS: Toxic Chemical Release Inventory System

Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/2009	Source: EPA
Date Data Arrived at EDR: 09/01/2011	Telephone: 202-566-0250
Date Made Active in Reports: 01/10/2012	Last EDR Contact: 12/02/2011
Number of Days to Update: 131	Next Scheduled EDR Contact: 03/12/2012
	Data Release Frequency: Annually

## TSCA: Toxic Substances Control Act

Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.

Date of Government Version: 12/31/2006	Source: EPA
Date Data Arrived at EDR: 09/29/2010	Telephone: 202-260-5521
Date Made Active in Reports: 12/02/2010	Last EDR Contact: 12/27/2011
Number of Days to Update: 64	Next Scheduled EDR Contact: 04/09/2012
	Data Release Frequency: Every 4 Years

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## FTTS: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 04/09/2009  
Date Data Arrived at EDR: 04/16/2009  
Date Made Active in Reports: 05/11/2009  
Number of Days to Update: 25

Last EDR Contact: 11/28/2011  
Next Scheduled EDR Contact: 03/12/2012  
Data Release Frequency: Quarterly

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ICIS: Integrated Compliance Information System

The Integrated Compliance Information System (ICIS) supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System (NPDES) program.

Date of Government Version: 07/20/2011	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/10/2011	Telephone: 202-564-5088
Date Made Active in Reports: 01/10/2012	Last EDR Contact: 12/21/2011
Number of Days to Update: 61	Next Scheduled EDR Contact: 04/09/2012
	Data Release Frequency: Quarterly

## PADS: PCB Activity Database System

PCB Activity Database. PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 11/01/2010	Source: EPA
Date Data Arrived at EDR: 11/10/2010	Telephone: 202-566-0500
Date Made Active in Reports: 02/16/2011	Last EDR Contact: 10/19/2011
Number of Days to Update: 98	Next Scheduled EDR Contact: 01/30/2012
	Data Release Frequency: Annually

## MLTS: Material Licensing Tracking System

MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 06/21/2011	Source: Nuclear Regulatory Commission
Date Data Arrived at EDR: 07/15/2011	Telephone: 301-415-7169
Date Made Active in Reports: 09/13/2011	Last EDR Contact: 12/12/2011
Number of Days to Update: 60	Next Scheduled EDR Contact: 03/26/2012
	Data Release Frequency: Quarterly

## RADINFO: Radiation Information Database

The Radiation Information Database (RADINFO) contains information about facilities that are regulated by U.S. Environmental Protection Agency (EPA) regulations for radiation and radioactivity.

Date of Government Version: 01/11/2011	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/13/2011	Telephone: 202-343-9775
Date Made Active in Reports: 02/16/2011	Last EDR Contact: 10/13/2011
Number of Days to Update: 34	Next Scheduled EDR Contact: 01/23/2012
	Data Release Frequency: Quarterly

## FINDS: Facility Index System/Facility Registry System

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 08/02/2011	Source: EPA
Date Data Arrived at EDR: 09/13/2011	Telephone: (206) 553-1200
Date Made Active in Reports: 01/10/2012	Last EDR Contact: 12/13/2011
Number of Days to Update: 119	Next Scheduled EDR Contact: 03/26/2012
	Data Release Frequency: Quarterly

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

## EDR PROPRIETARY RECORDS

### *EDR Proprietary Records*

#### Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Data Release Frequency: Semi-Annually

## TACOMA/PIERCE COUNTY:

### Closed Landfill Survey

Following numerous requests for information about closed dumpsites and landfills in Pierce County, the Tacoma-Pierce County Health Department decided to conduct a study on the matter. The aim of the study was to evaluate public health risks associated with the closed dumpsites and landfills, and to determine the need, if any, for further investigations of a more detailed nature. The sites represent all of the known dumpsites and landfills closed after 1950.

Date of Government Version: 09/01/2002

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 11/21/2011  
Date Data Arrived at EDR: 11/22/2011  
Date Made Active in Reports: 12/22/2011

Last EDR Contact: 12/19/2011  
Next Scheduled EDR Contact: 04/02/2012  
Data Release Frequency: Annually

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

### Electric Power Transmission Line Data

Source: Rextag Strategies Corp.  
Telephone: (281) 769-2247

U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

### AHA Hospitals:

Source: American Hospital Association, Inc.  
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

### Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services  
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

### Nursing Homes

Source: National Institutes of Health  
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

### Public Schools

Source: National Center for Education Statistics  
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

### Private Schools

Source: National Center for Education Statistics  
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Most Recent Revision:	1983
North Map:	47122-F2 KIRKLAND, WA
Most Recent Revision:	1982

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

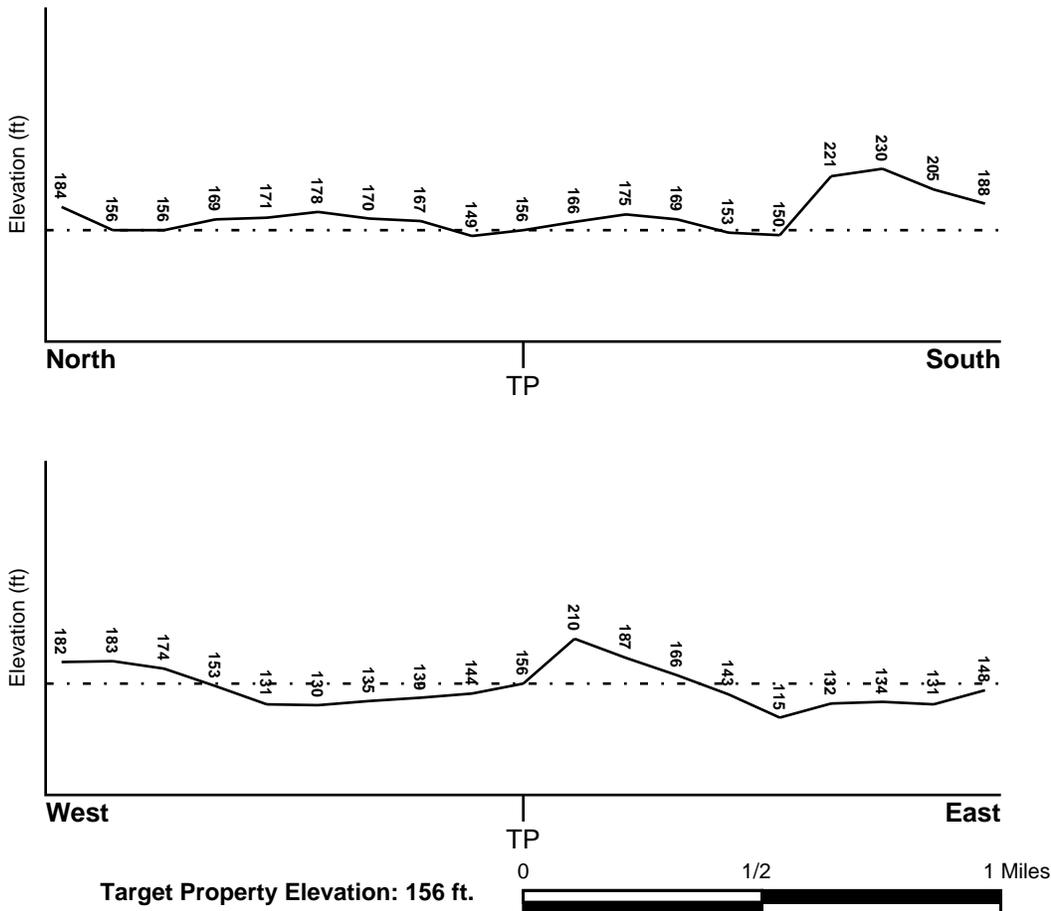

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WNW

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## FEMA FLOOD ZONE

Target Property County  
KING, WA

FEMA Flood  
Electronic Data  
YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 53033C0656F - FEMA Q3 Flood data

Additional Panels in search area:  
53033C0368F - FEMA Q3 Flood data  
53033C0365F - FEMA Q3 Flood data  
53033C0652F - FEMA Q3 Flood data

## NATIONAL WETLAND INVENTORY

NWI Quad at Target Property  
MERCER ISLAND

NWI Electronic  
Data Coverage  
YES - refer to the Overview Map and Detail Map

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### **Site-Specific Hydrogeological Data\*:**

Search Radius: 1.25 miles  
Location Relative to TP: 1/2 - 1 Mile NE  
Site Name: BELLEVUE PLATING CO INC  
Site EPA ID Number: WAD078194107  
Groundwater Flow Direction: NOT AVAILABLE  
Inferred Depth to Water: 15 feet to 25 feet  
Hydraulic Connection: The uppermost water-bearing strata is a glacial drift composed of sands, gravel, and clay with lenses of consolidated till.  
Sole Source Aquifer: No information about a sole source aquifer is available  
Data Quality: Information is inferred in the CERCLIS investigation report(s)

## AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
---------------	-------------------------	---

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
3	1/8 - 1/4 Mile NE	E
9	1/4 - 1/2 Mile South	NW
D11	1/4 - 1/2 Mile SW	Varies
D13	1/4 - 1/2 Mile SW	Not Reported
I36	1/2 - 1 Mile West	SE

For additional site information, refer to Physical Setting Source Map Findings.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

---

#### Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:  
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:  
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

---

#### Soil Map ID: 2

Soil Component Name: Tukwila

Soil Surface Texture: muck

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Very poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	18 inches	muck	A-8	Highly organic soils, Peat.	Max: 14 Min: 4	Max: Min:
2	18 inches	59 inches	stratified diatomaceous earth to muck	A-8	Highly organic soils, Peat.	Max: 14 Min: 4	Max: Min:

### Soil Map ID: 3

Soil Component Name: Alderwood

Soil Surface Texture: gravelly sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 84 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches	gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 0.42 Min: 0.01	Max: 6 Min: 5.1
2	11 inches	26 inches	very gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 0.42 Min: 0.01	Max: 6 Min: 5.1

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
3	26 inches	59 inches	very gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 0.42 Min: 0.01	Max: 6 Min: 5.1

### Soil Map ID: 4

Soil Component Name: Bellingham

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 15 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 7.3 Min: 5.6
2	11 inches	59 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 7.3 Min: 5.6

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### Soil Map ID: 5

Soil Component Name: Water

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:  
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

### Soil Map ID: 6

Soil Component Name: Arents

Soil Surface Texture: gravelly sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 84 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	25 inches	gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 0.42 Min: 0.01	Max: 6 Min: 5.1

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
2	25 inches	59 inches	very gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 0.42 Min: 0.01	Max: 6 Min: 5.1

### LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

## HYDROLOGIC INFORMATION

**Flood Zone Data:** This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

**REPORT  
UNDERGROUND STORAGE TANKS REMOVAL  
AVIS RENT A CAR SYSTEM, INC.  
11969 BELLEVUE-REDMOND ROAD  
BELLEVUE, WASHINGTON**

#### INTRODUCTION

This report documents the removal of two underground storage tanks (USTs) at the Bellevue Avis site located at 11969 Bellevue-Redmond Road in Bellevue, Washington, as shown on the Site Plan, Figure 1. The approximate former locations of the two tanks relative to other features that currently exist on the site are shown on Figure 1.

Landau Associates, Inc. was contacted by Perkins Coie on March 2, 1989, to represent Avis Rent A Car System, Inc. (Avis) during the removal of petroleum-contaminated soil that was discovered by Petroleum Equipment Maintenance Company (PEMCO) of Portland, Oregon, during removal of one 5,000-gallon UST at the Bellevue site. PEMCO was contracted by Avis to remove the 5,000-gallon steel gasoline tank and replace it with a new fiberglass tank of comparable size.

LANDAU ASSOCIATES, INC.

## **BACKGROUND**

We understand that the site has been owned and operated by Avis since the mid-1970s. According to existing information, the 5,000-gallon gasoline tank was installed by Avis; prior to purchase by Avis, it is reported that the site was operated as a commercial gas station.

## **DISCUSSION OF UST CLOSURE ACTIVITIES**

- o March 1, 1989. During removal of the 5,000-gallon steel gasoline tank by PEMCO, some petroleum product was observed floating on the ground water surface and coating soil below product lines at the east end of the tank excavation. According to PEMCO, the tank appeared to be in good condition following removal with no apparent leaks. Two soil samples and one ground water sample were collected by PEMCO following the tank removal to determine site conditions and disposal procedures for soil and water to be removed from the excavation limits. The water sample was analyzed to evaluate the appropriate disposal of dewatering water.
- o March 2, 1989. First site visit by Landau Associates, Inc. to evaluate extent of contamination. About one-third of the ground water surface in the excavation had a floating product film. A slightly oily sheen was observed emanating from soil on the west end and a mild odor of fuel was detected at the east and west ends of the excavation. Soil conditions at the site consist of 2- to 3-inches of asphalt overlying approximately 6 inches of brown silty, sandy, crushed rock, which in turn overlies glacial till fill. The Washington State Depart-

ment of Ecology (Ecology) Spill Response Team was notified and informed of existing site conditions.

- o March 3, 1989. Verbal results from Sound Analytical Services, Inc. indicate that levels of contamination (see Table 1) are below Ecology's cleanup level guidelines. The Ecology guidelines are presented in Table 2.
- o March 6, 1989. The City of Bellevue authorizes disposal of excavated soil to Coal Creek Landfill and ground water to METRO providing adequate sediment control measures are implemented. Northwest Enviroservice removes 600 gallons of oil/water from the surface of the ground water for treatment. PEMCO constructs a sediment catch basin to control turbidity of dewatering water.
- o March 7, 1989. Stockpiled soil removed from site and hauled to Coal Creek Landfill for disposal. Dewatering activities at the site were shut down by the City of Bellevue because of excessive sediment being discharged to METRO. Measurements by Landau Associates, Inc. with a Photovac TIP photoionization meter indicate an increase above background of 1.6 units near the exposed product pipes on the east end of the excavation. Other measurements in the excavated area showed no significant increase above background levels.
- o March 8, 1989. Excavation dewatered by Allied Environmental Services, Inc. with vacuum trucks. Water was disposed of in a settling basin facility operated by the City of Bellevue for sediment removal prior to discharge to METRO. Soil excavation continued for the new tank installation until sidewall

sloughing threatened the Avis building and nearby sidewalk. Work was shut down until shoring could be installed.

- o March 9, 1989. PEMCO set shoring in the excavation to prevent sidewall sloughing.
- o March 10, 1989. PEMCO completed excavating for the replacement tank. Soil samples were collected on the east and west ends of the excavation 7 feet below ground surface. Landau Associates determined that no additional sample collection would be necessary for closure of the 5,000-gallon gasoline tank. Laboratory test results, presented in Table 1, from two soil and one water sample collected on March 1 and two soil samples collected on March 10, indicate that all levels of contamination are below Ecology's soil and water cleanup level guidelines. The Ecology guidelines are presented in Table 2.
- o March 16, 1989. A second 500-gallon waste oil UST was discovered by PEMCO at the east end of the tank excavation when excavation sidewall sloughing exposed a damaged tank below the previously identified product lines. This 500-gallon tank was not installed or used by Avis; thus, it is probable that the tank was associated with the former gasoline station. The tank contained approximately 250 gallons of oily sludge (on the bottom of the tank) and approximately 250 gallons of water. Samples of the sludge and water from inside the waste oil tank were collected by Northwest Enviroservice for laboratory analysis.
- o March 24, 1989. Landau Associates contacted by PEMCO and informed of 500-gallon waste oil tank. The waste oily sludge

was classified by Northwest Enviroservice as hazardous waste based on chromium levels in exceedence of U.S. Environmental Protection Agency (EPA) standards established for used oil. Laboratory results for the waste oily sludge and the EPA waste oil criteria are presented in Table 3. Based on verbal results from PEMCO, the water in the tank did not exceed Ecology's guidelines as presented in Table 2. Laboratory results for the water sample are not included in this report, but are available from PEMCO or Northwest Enviroservice.

- o March 28, 1989. Ground water was pumped from the waste oil tank by Northwest Enviroservice for disposal. The tank was purged with dry ice in preparation for excavation and removal. The 500-gallon steel tank was removed and inspected. In addition to a large hole about 6 inches wide by 8 inches long (physical damage prior to discovery by PEMCO) on the top of the tank, three holes approximately 1/8-inch diameter were discovered on the south end, and one hole approximately 5/8-inch diameter was discovered on the east side of the tank. A small amount of water and waste oil sludge leaked from these holes as the tank was being removed from the excavation. The holes were temporarily plugged by PEMCO using clay.

The tank with its contents of oily sludge was removed from the site by and Northwest Enviroservice for processing and proper disposal. Soil around the tank was excavated to remove as much contamination as possible without undermining the building or damaging underground utilities in the area.

It was determined by site inspection that the Avis building is supported by auger cast piles.

During soil excavation, some petroleum product was released from the oily soil onto the ground water in the excavation forming a floating product film. When the maximum practical excavation limits were reached, soil samples were collected from soil at the bottom of the tank excavation, the north sidewall, the east sidewall, and the excavated tank backfill material. Northwest Enviroservice returned and skimmed the floating product film from the ground water surface for processing and disposal. PEMCO planned to skim any additional floating product from the ground water surface prior to backfilling the excavation with pea gravel.

- o March 31, 1989. Laboratory test results indicate that some contamination associated with the 500-gallon waste oil tank exists in the soil under the Avis building and the underground utilities at the east limits of the excavation (see Table 4).
- o April 4, 1989. Approximately 19 tons of contaminated soil shipped to Cedar Hills Landfill for disposal.

#### **CONCLUSIONS AND RECOMMENDATIONS**

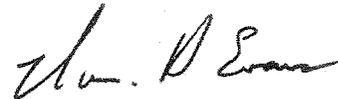

Satisfactory removal of two USTs at the Avis Rent A Car facility has been accomplished to the extent that soil removal is feasible. Based on a comparison of the test results in Table 4 and the soil cleanup guidelines in Table 2, a relatively minor exceedence of benzene and total petroleum hydrocarbons exists under the Avis Rent A Car building, and a minor exceedence of total petroleum hydrocarbons exists under the utilities located to the

east of the former waste oil tank. Due to the low levels of contamination remaining, the low permeability characteristics of glacial till fill, presence of the existing building and underground utilities, and the lack of downgradient receptors, we do not believe any additional remedial action is feasible or warranted or that long-term monitoring is necessary. A photographic record of site conditions, as well as all field memorandum documenting UST removal activities, will be maintained in our files to support this conclusion.

We trust that this report meets your current needs. Please contact us if you have any questions.

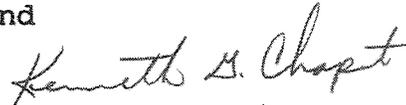

Respectfully submitted,

Ecology Northwest Regional Office

August 10, 1989

TO: Paul O'Brien  
FROM: D.A. Davidson  
SUBJECT: LUST Leak, Bakker's Fine Dry Cleaning, Bellevue

Case #: N0094  
Date/Time: 8/8/89 - 1350  
Substance: Stoddard's Solvent  
Amount: Unknown  
Amount Removed: Unknown  
Reporting Party: Dave Renstrom  
City of Bellevue  
Phone: 455-7818  
Responsible Party: Bakker's Fine Dry Cleaning  
12002 NE 8th Street  
Bellevue, Washington  
Phone: 454-3003  
Environmental Damage: None Apparent  
Media Interest: None

At 1350, August 8, 1989, I received a call from the City of Bellevue that a LUST was being removed from behind Bakker's Fine Dry Cleaning. During the removal, the tank had apparently leaked an undetermined amount of Stoddard's Solvent (Class 2 Flammability).

Upon arriving on scene I met with Bill Doyle, Bakker's Facilities Manager and John Curnow, a consultant with Geotech. They stated that the tank did not have a leak. Instead they had found that a facility drain line had a crack in it and had been leaking the solvent for an undetermined period of time. The product was fully contained within the evacuation.\* Because of the soil makeup, it did not appear that any of the solvent leached into groundwater. John Curnow was taking soil samples. The contaminated soil was being transported to the Fife Sand and Gravel Company to be properly treated/disposed of.

Conclusions/Recommendations

Recommend any followup be carried out by the LUST program.

DAD:kr

cc: Jon Neel  
Lee Dorigan

\*The soil surrounding the tanks is hard packed glacial till. The tanks themselves were buried in packing sand which appeared to have soaked up most of the product.

Redmond, WA 98052

Re: Avis Rent A Car Underground Storage Tanks

Dear Mr. Hickey:

Enclosed for your information on behalf of our client Avis Rent A Car System, Inc. is a report prepared by Landau Associates, Inc. on the removal of one 5,000 gallon and one 500 gallon underground storage tank from the Avis facility at 11969 Bellevue-Redmond Road, Bellevue, Washington.

The report confirms that both the 5,000 gallon tank and the 500 gallon tank have been removed. Residual soil contamination associated with the 5,000 gallon tank is below Department of Ecology guidelines for gasoline constituents and total petroleum hydrocarbons.

The report indicates that soil around the 500 gallon tank was excavated as completely as possible, but that excavation could not continue without undermining the Avis building or damaging underground utilities. As a result, according to the report, a relatively minor exceedence of Ecology guidelines for benzene and total petroleum hydrocarbons remains under the Avis building and a minor exceedence of total petroleum hydrocarbons remains under the utilities located to the east of the 500 gallon tank site.

Landau Associates believes that due to the low levels of contamination remaining, the low permeability characteristics of the glacial till fill, the presence of the existing buildings and underground utilities, and the lack of downgradient receptors, additional remedial action is not feasible or warranted and long-term monitoring is not

Joe Hickey  
June 12, 1989  
Page 2

necessary. Accordingly, Avis does not intend to undertake further remedial action or institute long-term monitoring.

If the Department of Ecology has any comments on this matter, we would appreciate your advising us.

Very truly yours,

Douglas S. Little

Re: Avis Rent-A-Car Underground Storage Tank

Dear Mr. Little:

Thank you for the final report from Landau Associates on the underground tank removal and subsequent site remediation at 11969 Bellevue-Redmond Road, Bellevue, WA. I will place the report in our files.

You've indicated in your letter and in a telephone conversation that a small amount of petroleum contaminated soil still remains in excess of Department of Ecology recommended clean-up levels. It's my understanding that this soil could not be removed because further excavation would undermine the existing structure on the property. I will note this fact in the file, and I would recommend removing the remaining contaminated soil at any time it became feasible. I might also suggest as a precaution against future liabilities to monitor the situation with a monitoring well(s).

Sincerely,

  
Joseph M. Hickey  
UST Site Inspector

Bakkers Fine Dry Cleaning  
11855 Northeast 8th  
Bellevue, Washington 98005

Attention: William Doyle, Facilities Manager

Subject: Closure Report  
Multiple Underground Storage Tanks  
11855 Northeast 8th  
Bellevue, Washington

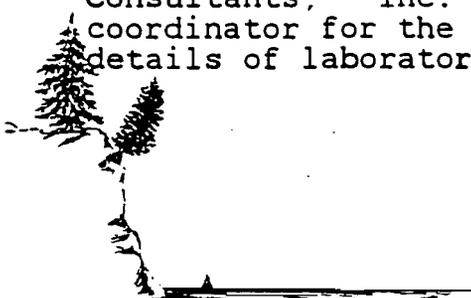

Gentlemen:

In accordance with the terms of our proposal of June 28, 1989, the Environmental Services Division of Geotech Consultants, Inc. has completed field observation, documentation, and laboratory analysis associated with formal "closure" of multiple underground storage tanks (UST's) at the subject site. This activity was initiated to satisfy regulatory requirements imposed under 40 CFR, part 280.72, pertaining to site assessments at time of closure. This report provides a summary of our field and laboratory methods along with results and conclusions.

## METHODOLOGY/SCOPE OF WORK

### Agency Notification

In compliance with 40 CFR, part 280.71, a letter of notification to the implementing agency (Washington Department of Ecology - WDOE) was sent on June 23, 1989 by Mr. William Doyle of Bakker's Cleaners. A copy of this letter is on file in our office. In addition, in compliance with the request of the Northwest Regional WDOE office, a telephone call was made to the agency at the time of tank removal. Finally, environmental staff of Geotech Consultants, Inc. consulted with Mr. Joe Hickey, UST coordinator for the WDOE Northwest Regional Office regarding details of laboratory testing of soils.

### Tank Excavation/Soil and Groundwater Sampling

From August 8 through August 10, 1989 an environmental engineer from Geotech Consultants, Inc. was present during the removal of multiple UST's at the subject site. Tank removal was performed using a track-mounted backhoe operated by Joe Hall Construction of Fife, Washington. Prior to removal, the tank was "conditioned" in a manner consistent with guidelines offered for such work in API Recommended Practice 1604 (Removal and Disposal of Underground Petroleum Storage Tanks), and API Publication 2015. The removal was witnessed by Richard Henderson, Fire Marshall for the City of Bellevue.

Objectives for our participation in the project included:

- (1) Photo-documentation of the condition of the UST's along with soil and groundwater appearance in the tank excavation.
- (2) Sampling of soil and groundwater for subsequent laboratory analysis.
- (3) Generation of a coherent report documenting the activity and findings.

### Soil Sampling

With respect to details of soil sampling, following current WDOE guidelines, we obtained a soil sample from each of the four sides of each excavation, and from the bottom of each excavation. Samples were placed in sterilized glass jars with teflon lids furnished by the project laboratory. Samples were stored in an iced chest at the site and taken to the lab in this condition to preserve sample integrity by minimizing excessive dissipation of volatile fraction hydrocarbons. Each jar was clearly labeled as to sampling location, time of sampling, sampling person, project number, etc. EPA recommended protocol for sample management, including maintenance of chain-of-custody documentation, was observed during the course of the project.

### Laboratory Analysis

As the UST's at this site reportedly had contained solvents, diesel and distillates during their operating life, EPA Method 418.1 and EPA Method 8010 were used to analyze soil samples. These methods provide a basis for comparison of site conditions at UST sites published in current WDOE guidelines. The detection sensitivity for Method 418.1 is approximately 1 part per million (ppm) for petroleum in water and 5 ppm for petroleum in soils. In addition to EPA Method 418.1, Geotech Consultants, Inc. included one soil sample using EPA Method 8010 for analysis underneath the tank area. This analysis was performed in an effort to assess the potential for the presence of halogenated volatile organic compounds. Included in this family of compounds are many common dry cleaning solvents such as carbon tetrachloride and trichloroethylene.

The test methodology was by Gas Chromatography (GC) accompanied by a Hall-type detector in accordance with EPA Method 8010. Detection limits using this methodology are on the order of 1 part per billion (ppb).

## RESULTS OF CLOSURE INVESTIGATION

### General Discussion

The subject site is situated on the north side of Northeast 8th Street in Bellevue, Washington, approximately one mile east from the "core" high-rise area. Two buildings on the property are used as dry cleaning facilities. One building is located on the east side of the property and is used for dry cleaning operations. The second building is located directly west and is used for office space and storage.

This site is located in an area underlain by glacially-consolidated materials. Soil materials in this locality are typically characterized by glacial till, clayey silt and gravelly sands. Glacial till is a mixture of compact silt, clay, gravel and sand.

Some minor groundwater seepage was noted during the tank excavation at a depth of approximately eight feet below the ground surface.

Observations During Tank Removal

The multiple tanks removed on August 8 through August 10 included: one 6,000-gallon-capacity UST used for stoddard solvent, one 2,000-gallon-capacity diesel tank, one 2,000-gallon tank formerly used to store distillates (previously thought to be a 400 to 500-gallon tank), and one 200-gallon tank formerly used to store solvents.

Tanks on the property were separated into two adjoining excavations. Excavation No. 1 contained the 200-gallon solvent tank, the 2,000-gallon distillate tank, and the 2,000-gallon diesel tank. This excavation measured approximately 21 feet in width by 28 feet in length, and was 13 feet deep at a location immediately northeast of the existing dry cleaning building. Excavation No. 2 contained the 6,000-gallon stoddard tank and measured approximately 15 feet in width, 34 feet in length, and 11 feet in depth.

All tanks visually appeared to be in very good condition. A review of all tank distribution lines showed no corrosion, holes or defects. All of the tanks had been originally installed in an inert brown sand backfill material.

A characterization of a typical profile of materials/native soil conditions adjacent to the tank excavation (excluding the tank backfill) is as follows:

<u>Depth Range</u>	<u>Soil/Material Description</u>
0 - 3 inches	Asphalt surface pavement
4 - 6 inches	Crushed rock pavement subgrade
6 - 18 inches	Gravelly sand sub-base
1.5 - 5 feet	Light brown silty clay with mottled grey lenses. Firm to stiff, moist.
5.0 - 13 feet	Grey silty clay with occasional sand lenses. Hard, very moist.

During the excavation, discoloration or iridescent "sheens" were noticed in some soil and groundwater near the 2,000-gallon distillate and 200-gallon solvent tanks. In addition, a hydrocarbon odor was detected within the same area. Upon further investigation during the excavation and

tank removal process, it was established that a crushed 4-inch tile drain line was leaking into the subsurface soil within the area of the distillate and solvent tanks, discharging water from a 2-inch floor drain connected to the 4-inch tile line beneath the dry cleaning building. The 2-inch floor drain is connected directly to the stoddard tank room inside the building by two floor drains. According to the operator, this area has been the location of occasional "accidental" spills discharging stoddard fluid directly into the drains during cleanup.

As the excavation process continued, the contaminated water appeared to be confined within the backfill bedding material of the 2,000-gallon distillate tank and the 200-gallon solvent tank. Following the removal of these two tanks, the remaining sand bedding and accumulated water was overexcavated and removed from the site. No further hydrocarbon odor or iridescent "sheens" were noted in the soil or groundwater after this removal. Photographs were made of the excavation to document this observation.

The broken 4-inch tile drain leading from the building has been replaced with a 4-inch PVC drain line and the 2-inch floor drain has been reconnected to the PVC drain line. Based on these repairs, no further seepage of contaminants below the surface is anticipated at this time. Photographs were also made of this repair procedure.

#### Hydrocarbon Analysis of Soil and Groundwater

As mentioned earlier, a total of five soil samples were obtained from each excavation for laboratory analysis for total petroleum hydrocarbons using EPA Method 418.1 (infrared spectro-photometry). In addition, a single sample from the floor of excavation Number one was analyzed in accordance with EPA Method 8010 for halogenated volatile organic compounds. The following table provides a summary of the results of the laboratory analysis.

As subsurface water encountered during this investigation was attributed solely to seepage from the broken 4-inch tile and connecting 2-inch floor drain, no water samples were analyzed for this site. The removal of contaminated bedding sand and subsequent water contained in the sand left the site devoid of water at the excavation floor.

CONCLUSIONS/RECOMMENDATIONS

Based on the information developed as a result of this closure investigation, it appears that the soil and groundwater proximal to the former UST installation were not significantly contaminated as a result of the installation's presence or operation. Having satisfied the site assessment requirements of 40 CFR, parts 280.71 and 280.72 in a manner consistent with the guidelines for such actions provided by the Washington State Department of Ecology, and having found no residual hydrocarbon contamination exceeding limits prescribed under prevailing regulatory guidelines of this state, we conclude that no further characterization of this tank installation is required and that it has been properly closed in conformance with the intent and purpose of the aforesaid federal and state regulations-guidelines.

LIMITATIONS

This report has been prepared for specific application to this project in a manner consistent with that level of care and skill normally exercised by members of the environmental science profession currently practicing under similar conditions in the area, and in accordance with the terms and conditions set forth in our proposal dated June 28, 1989. This report is for the exclusive use of Bakkers Fine Dry Cleaning and their representatives. No other warranty, expressed or implied, is made. If new information is developed in future site work which may include excavations, borings, studies, etc., Geotech Consultants, Inc., should be allowed to reevaluate the conclusions of this report and to provide amendments as required.

We appreciate the opportunity to serve you on this interesting project and we trust that the information provided here will be of value in your planning efforts. If you have any questions, or if we can be of further service, please do not hesitate to contact us.

Respectfully submitted,  
GEOTECH CONSULTANTS, INC.

Re: Avis Sales Lot located at 11969 Bel-Red Road  
in Bellevue, Washington

Dear Mr. Little:

Petroleum Services Unlimited, Inc. (PSUI) is pleased to present this summary of the limited site investigation conducted at the above referenced site. As part of the original scope of work, PSUI was to excavate test pits along the north side of the building located at the site in an attempt to locate an underground storage tank (UST) that was suspected to exist. This suspicion was based on a magnetometer survey conducted by Geotech Consultants in the area to the north of the building. The magnetometer survey had identified sub-surface anomalies that could not be positively identified as being an UST, but were of such nature that additional subsurface investigation was warranted.

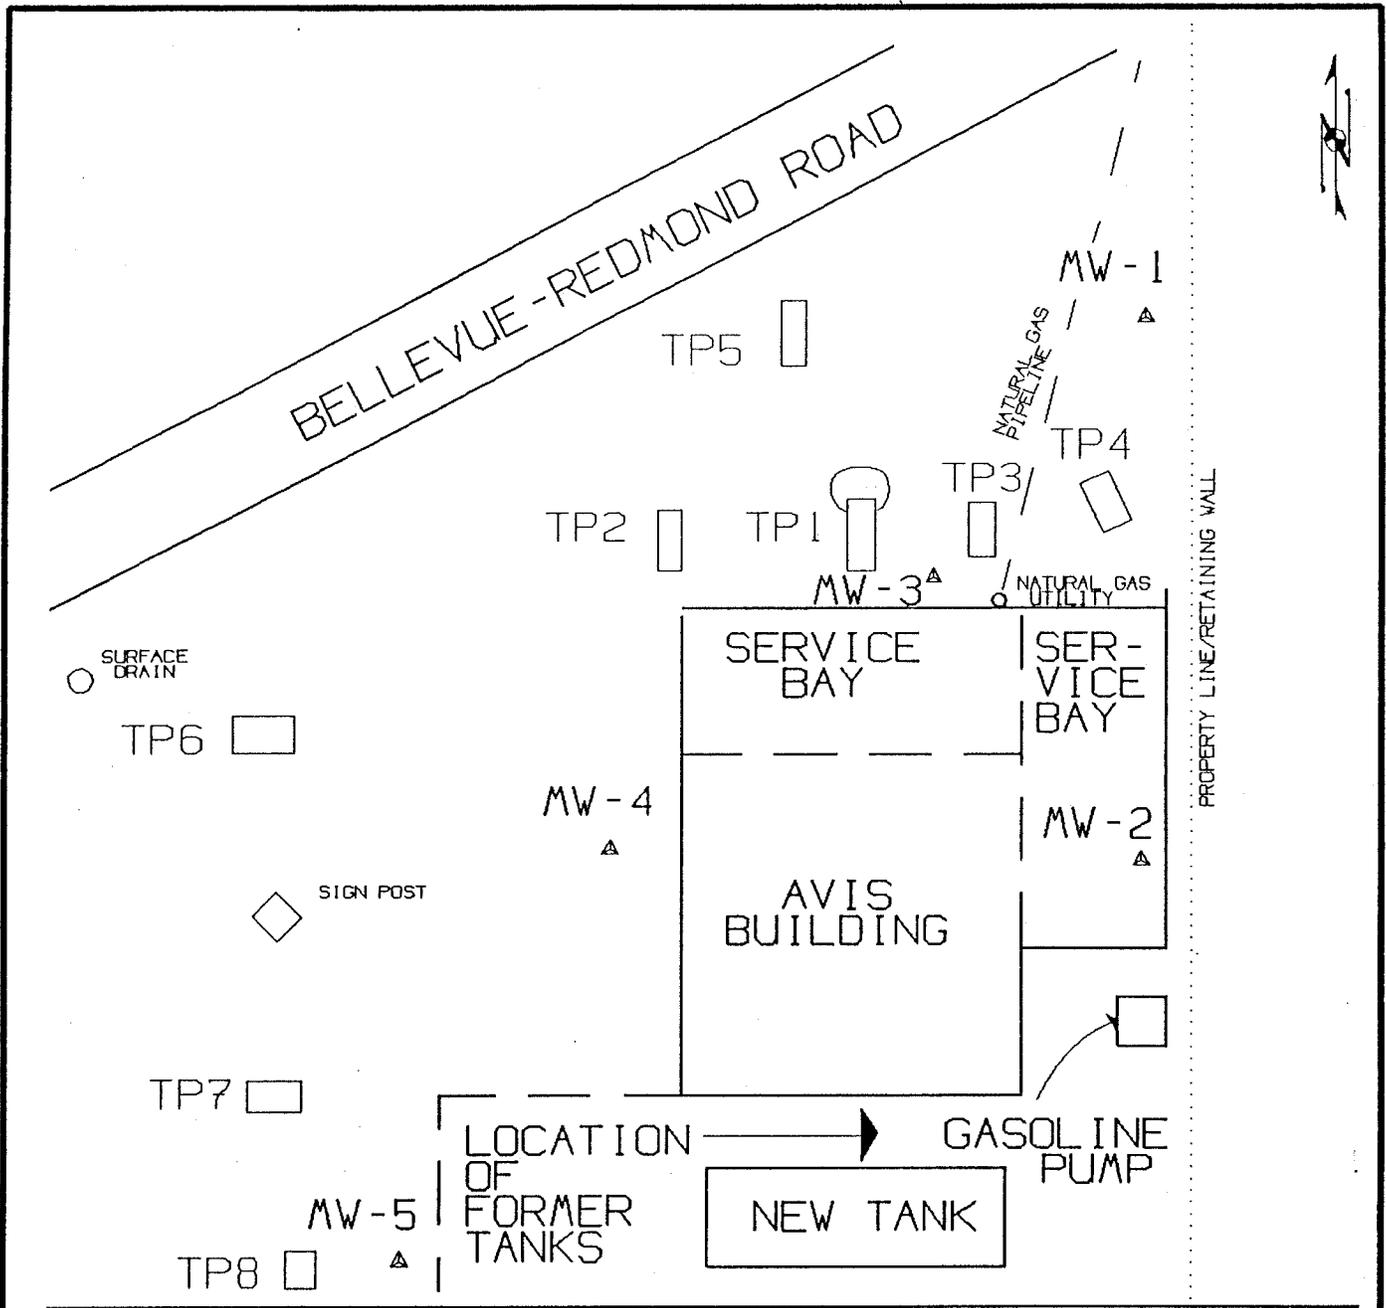

In addition, PSUI, under Geotech Consultants' direction, conducted additional test pits in an area of the site not previously investigated. The test pit locations were based on historical photos of the site that showed former petroleum handling equipment at the site as well as other sub-surface anomalies.

### **Summary Activities**

Based on previous subsurface investigations (Landau and Assoc. 1989; Geotech Consultants 1991), petroleum contamination is known to exist at the Avis Car Sales Lot from previous petroleum handling equipment operated at the site. Therefore, in coordinating site activities to minimize disruption of current site uses, a permit for disposal of contaminated soils was applied for and granted by the King County Department of Public Health, Waste Screening Program. The reason for immediate disposal was to remove contaminated soils from the site and avoid stockpiling where space for such activities is limited.

PSUI mobilized and coordinated the test pit activities on July 16 and 17, 1991 under the general direction of Geotech Consultants. Utilities markouts were arranged to aid in determining safe test pit locations. The following observations and activities were conducted:

- o Eight test pits at the Avis Car Sales Lot site were excavated, logged and sampled in accordance with generally accepted scientific procedures;
- o Four of the test pits were located adjacent to the north wall of the building located at the site (refer Figure 1);

BELLEVUE, WASHINGTON

Figure 1  
Site Location

PETROLEUM SERVICES UNLIMITED, INC.

- o All four of the test pits encountered pea gravel of varying thickness. The first test pit 1, TP1, encountered pea gravel approximately 2 feet thick adjacent to the building overlying a remnant asphalt pavement layer. Soils encountered below this layer were a grey gravelly sand with an odor of petroleum and photo-ionization detector (PID) measurements of 21.5 parts per million (ppm). Two soils samples were collected at the south end of the excavation. One sample, TP1-1, was collected using the backhoe bucket to bring soils to the surface where they were transferred with a decontaminated stainless steel trowel into a laboratory prepared sample container. The other sample, TP1-2, was collected from undisturbed soils approximately 3 feet from the north wall of the building using a decontaminated stainless steel hand auger that was used to auger into the side wall of TP1. The auger was then brought to the surface where the soils were transferred by a stainless steel spoon into a laboratory prepared sample container;
- o A decision was made in the field to expanded TP1 by trenching out perpendicular to the building to determine if the extent of field detectable contaminated soils could be identified. The pea gravel back fill created excavation difficulties due to sloughing of the side walls. TP1 was expanded to approximately 20 feet out from the building. Pea gravel was estimated to extended 6 feet below pavement grade at this location. A soil sample (TP1-3) was collected from soils brought up from below the pea gravel at the 6

to 7 foot depth in gravelly sands with PID measurements of 23 ppm. TP1 was then abandoned and back filled with material brought from off site;

- o A decision was made in the field to have sample TP1-2 analyzed to identify the type of contaminant (if any) in the soils at this location. The sample was hand delivered to ASI Laboratories in Bothell, Washington for total petroleum hydrocarbons analysis by EPA Method 8015 Modified;

- o TP2 was excavated out from the northwest corner of the building (refer figure 1) in an area identified as having a magnetic anomaly. TP2 is characterized as back fill material with a .5 foot layer of pea gravel at the 1.5 to 2 foot depth below pavement grade. None of the back fill material exhibited any PID measurements. A brown silt loam with roots throughout was encountered at the 5 foot depth. A soil sample (TP2-4) was collected at the fill material/loam interface;

- o TP3 was excavated out from the natural gas utility meter (refer figure 1). Pea gravel was encountered from below pavement grade to approximately the 4 to 5 foot depth. Due to sloughing of the pea gravel, the bottom of the excavation was not observed. Soils brought to the surface in the backhoe bucket were characterized as a grey/blue gravelly sand-sandy gravel fill material with PID measurements of 72 ppm. A soil sample was collected from these

soils (TP3-5);

- o TP4 was excavated out from the northeast corner of the building (refer figure 1) adjacent to a 2.5 foot high retaining wall bordering the neighbors' property to the east. Pea gravel was encountered from below pavement grade to approximately the 4 to 4.5 foot depth. Due to sloughing of the pea gravel, the bottom of the excavation was not observed. The retaining wall was exposed as a result of the sloughing and is estimated to extend 3 feet below pavement grade. Soils brought to the surface in the backhoe bucket were characterized as a gravelly sand with some clay lenses with PID measurements of 74 ppm. A soil sample was collected (TP4-6);
- o TP5 was excavated out from the building (refer figure 1) in an attempt to determine if field detectable contaminated soils extended to the north at the site. Upon excavating TP5, a vertical cut in the subsurface soils was observed. To the south toward the building was pea gravel to an unknown depth. To the north, TP5 is characterized as a crushed rock back fill below pavement grade to the 1 foot depth that is in contact with a 4 inch layer of remnant asphalt pavement. Below this asphalt layer is a brown gravelly sand to the 2 foot depth and below this is a blue/green sand with occasional gravels with PID measurements of 32 ppm. At the 6 foot depth these sands become wet to the 7 foot depth where they are in sharp contact with a peat loam. The sands at the 5 foot depth have PID measurements of 64 ppm. A soil sample (TP5-7) was collected

from the sands at the 6 to 7 foot depth;

Based on the above observations, it can be summarized that a shallow depression or excavation in the area to the north of the existing building has been back filled with pea gravel and brought to the current grade at the site.

o TP6 was excavated to the west of the building (refer figure 1) at the center of the parking area. This area is a low spot at the site and historical photos show that a pump island had been located in the general vicinity. Soils in TP6 are characterized as blue/green gravelly sand to the 1 foot depth, brown sands to the 2 foot depth in contact with a blue/green coarse sand with gravels with an odor of petroleum to the 3 foot depth. These sands are in sharp contact with a dark brown silt loam with wood chips and roots throughout. A soil sample (TP6-8) was collected at the 3 foot depth at the sand/loam interface;

o TP7 was excavated approximately 22 feet south of TP6 (refer figure 1). Pea gravel was encountered at the 2 foot depth below a sandy gravel fill material. Due to sloughing of the pea gravel, TP7 was abandoned for structural reasons to avoid creating a depression after back fill and compaction. It is estimated that the backhoe bucket penetrated to 5 feet below pavement grade without encountering any soils. No sample was collected;

o TP8 was placed and excavated approximately 16 feet south of TP7

toward NE 8th Street. Soils in TP8 are characterized as a brown sandy gravel fill material to the 1.75 foot depth below pavement grade. At 1.75 feet is a blue/green gravelly sand with an odor of petroleum to the 3 foot depth, a brown silt loam with roots throughout to the 3.5 foot depth, a light green, fine to medium sand with silt with and odor of petroleum to the total depth of the test pit at the 6 foot depth. A groundwater seep was noted at the 5 to 5.5 foot depth in TP8. This groundwater entered the test pit and ponded in the bottom. A noticeable sheen was observed floating on the surface of the water in TP8. Soil samples were collected from two different depths in the test pit. Sample TP8-9 was collected at the 5 foot depth in sandy soils with PID measurements of 7.2 ppm. Sample TP8-10 was collected at the 3 foot depth above the silt/loam layer of soil in gravelly sand with an odor of petroleum and PID measurements of 418 ppm. The PID measurements on samples TP8-9 and TP8-10 were made in the headspace of the sample jars on July 18, 1991.

Based on the above observations, it can be summarized that a second depression or excavation was identified to the west of the building at the Avis Car Sales Lot in an area that had been identified as having petroleum dispensing equipment operated on or near.

Sample TP1-2 analytical results indicated diesel contamination at 2200 ppm in the soils adjacent to the north wall of the building at the site. This level of contamination did not affect the

Perkins Coie  
July 24, 1991

PSUI  
Page 9

disposition or disposal of the soils excavated during test pit explorations.

In an interview with Gary Smith, the current Avis site manager, he indicated that the prior Avis site manager was aware of UST removal in the general area of TP7. This is information that can only be verified by Avis and is incorporated into this report as information that should be substantiated or investigated at greater depth as field detectable petroleum contamination has been identified in this general area.

In a matter of expediency, this letter has been prepared to summarize the extent of field activities conducted by Petroleum Services Unlimited, Inc. We are now in possession of nine soil samples collected during the exploratory test pit activities. The holding times of samples of this type are 14 days for petroleum hydrocarbons analysis. We would be happy to have selected samples analyzed at the request of Perkins Coie.

Reporting requirements for this project were not specified in the scope of work, therefore, this correspondence, without further scope of work modification, will be considered the extent of reporting.

Petroleum Services would be happy to consult and propose additional work at the site that appears to be necessitated based on the field and analytical data collected to date.

## Introduction

Petroleum Services Unlimited was contracted through counsel for Avis Rent-A-Car Systems to conduct an investigation and clean-up of Avis' property at 11969 Bellevue-Redmond Road in Bellevue, Washington. Please see figure 1 for site location. The scope of work consisted of the following:

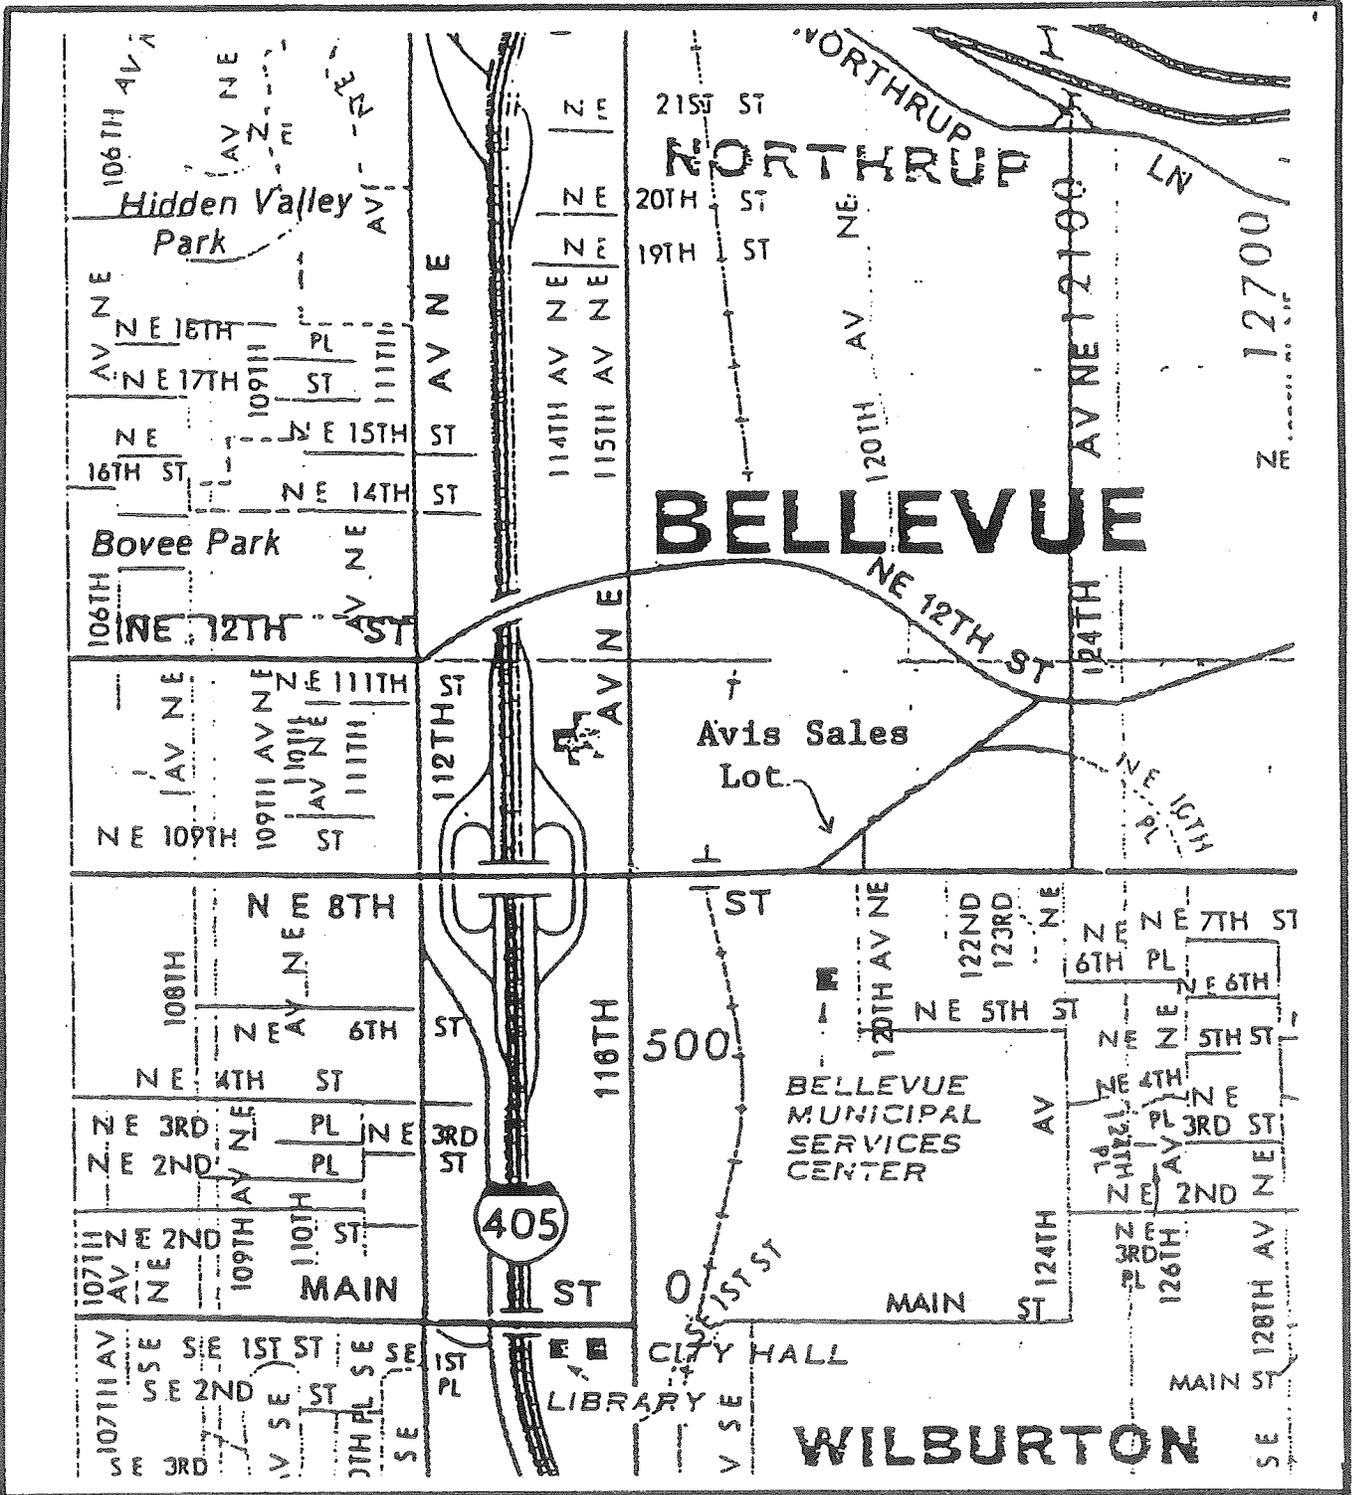

- o Excavation and removal of petroleum impacted soils and disposal at an approved facility;
- o Confirmation sampling;
- o Installation of one groundwater monitoring well and development and sampling of the well;
- o Sampling of existing groundwater monitoring wells in the clean-up area at the site;
- o Restoration of the impacted area and previous subsurface investigation areas;
- o Oversight, documentation and reporting of activities.

Prior to initiating the work, the following City of Bellevue permits were required:

- o Storm and Surface Water Utility Engineering Division: Clearing, Grading Excavation or Fill Permit;
- o Department of Public Works and Utilities: Side Sewer Permit;
- o Department of Public works and Utilities: Right of Way Use Permit.

During the clean-up action, the following unforeseen circumstances were encountered:

- o Discovery of an abandoned and truncated City of Bellevue 16 inch concrete storm or sanitary sewer pipe that was discharging water into the subsurface at the site;
- o Discovery of a 4 inch concrete pipe that was connected to and was discharging water into the abandoned sewer pipe;
- o Mineral spirits contaminated soils identified beneath the abandoned sewer pipe in a corner of the property that had not been previously investigated.

AVIS CAR SALES LOT  
 11969 BELLEVUE-REDMOND ROAD  
 BELLEVUE, WASHINGTON

Figure 1  
 Site Location

PETROLEUM SERVICES UNLIMITED, INC.

Upon discovery of the abandoned sewer pipe and running water, the City of Bellevue was notified. Subsequent actions regarding the sewer pipe and soils are discussed later in this report.

The field activities were conducted during the week of 23 September, 1991. Photographs were taken during the course of the field activities and are attached. This report discusses the environmental oversight and construction activities undertaken to remove diesel and mineral spirits impacted soils, and characterization and monitoring of groundwater at the site during this clean-up.

### **Background**

The Avis Sales Lot property has been owned and operated by Avis Rent-A-Car Systems as an automobile sales lot since approximately 1976. Prior to Avis, the lot was owned by Dubose, Inc. for approximately three years (1973-1976). Prior to then, the lot was owned by Gulf Oil and prior to Gulf by Fletcher Oil. Historical records indicate that Gulf and Fletcher operated the site as a commercial gas station and automobile service station. The commercial gasoline station was built in 1956. A records search to determine when the petroleum handling/dispensing equipment operated by Gulf and Fletcher was removed from the site has not been conducted.

In 1991, Avis initiated a property transaction for the Avis Sales Lot. As part of the transaction, a Phase II property investigation was conducted for the potential buyer by Geotech Consultants of Bellevue, Washington. Exploratory soil borings with monitoring well installations were conducted. Geotech identified diesel contaminated soils and gasoline contaminated groundwater and recommended additional investigation to determine the source for the contamination that it found.

In July of 1991, Petroleum Services Unlimited was contracted to investigate the extent of diesel contaminated soils at the site. During this investigation, these soils were approximately delineated in the area to the north of the building at the site. Also during the investigation, soils containing low levels of mineral spirits were identified in the south west portion of the site adjacent to NE 8th Street in an exploratory test pit. This mineral spirits contamination was determined to be below Ecology cleanup guidelines and no further action was taken regarding these soils.

### Site Description

The Avis Sales Lot is located on a pie shaped lot on the corner of Bellevue-Redmond Road and NE 8th Street in Bellevue, Washington (refer figure 2). There is one building at the site. Part of the building is used for offices. A drive through garage bay is used as a hand car wash. Another room, now used for storage, is a former service bay with a hydraulic hoist in the floor. There is one 6000 gallon double wall fiberglass underground storage tank (UST) located in the south east corner of the lot that is used to store unleaded gasoline for refueling Avis' rental fleet. The remainder of the lot is a paved parking/storage area used for sale of automobiles.

The site is located at the basal part of a small hill and is generally flat with a slight grade toward the west for drainage of the pavement. Soils at the site are described as follows:

- o The top 1 to 2 feet are a crushed rock, gravel and sand back fill material;
- o From approximately the 2 to 4.5-7 foot depth, there is an unconsolidated layer described as a brown, sometimes grey to grey blue clay, very compact, dry to moist, clay with silty clay and sandy clay lenses with occasional angular gravels throughout. This material varies in thickness from 3 to 5 feet thick at the site;
- o This material is in direct contact with a dark brown, wet, organic rich peat loam with abundant roots throughout. This peat layer was penetrated and is between 1 and 2 feet thick in the area investigated;
- o The peat layer overlies a light grey, saturated, poorly graded fine sand to a depth of at least 16 feet, the total depth of the exploratory borings drilled at the site.

### Utilities and Permits

In planning the clean-up, certain utilities were known to cross the area north of the Avis building where most of the work was to be conducted. In addition, the City of Bellevue has construction regulations that require work plan review and approval prior to issuance of permits to conduct construction activities. The permits were applied for and granted. The permitting process added about a month to the schedule for the work.

PETROLEUM SERVICES UNLIMITED

Prior to initiating the field work, these subsurface utilities had to be addressed:

- o Washington Natural Gas service hookup to Avis building;
- o Side Sewer to City of Bellevue Sanitary Sewer;
- o Puget Power electric cables.

The following is a brief discussion of the actions taken with the known utilities during the field activities at the site:

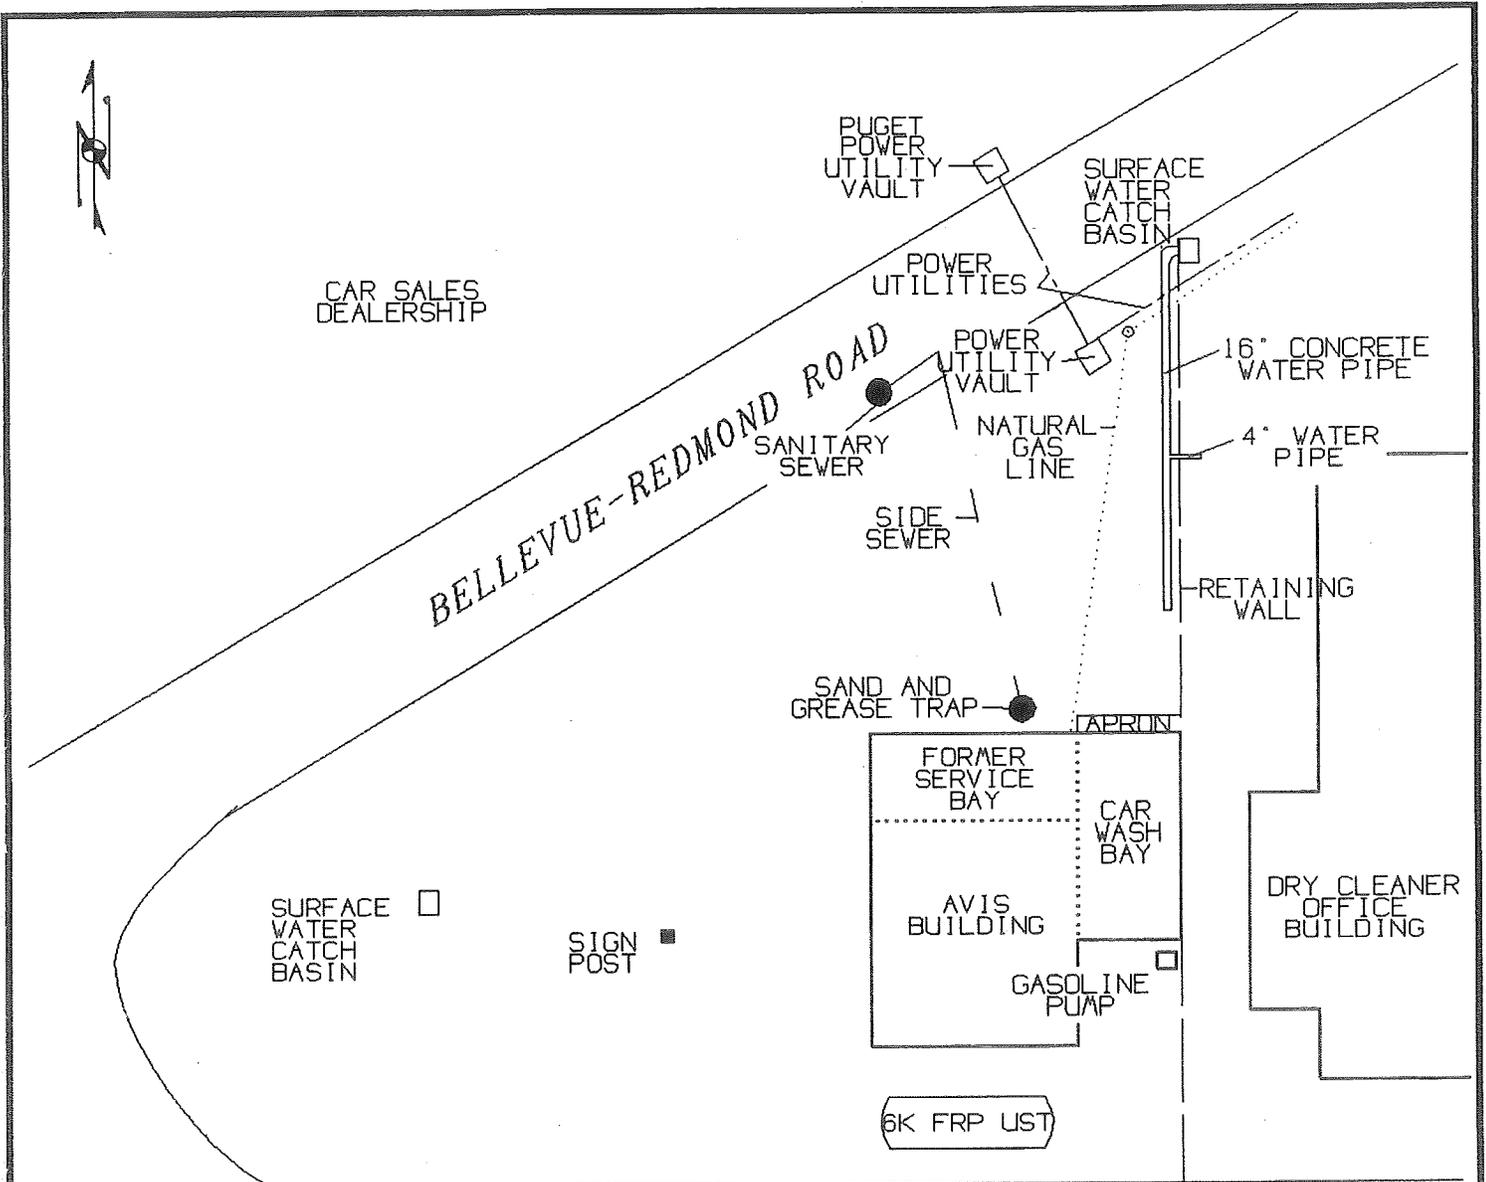

Washington Natural Gas Washington Natural Gas service to the Avis building from the north east corner of the lot was to be exposed in the area to be excavated. The location of the gas line is shown on figure 3. On 23 September, 1991 this line was capped and cut and the service to the Avis building disconnected by Washington Natural Gas.

The natural gas was reconnected on 26 September, 1991 by Washington Natural Gas. The hook up was completed with plastic pipe. Service to the building was restored on 30 September, 1991 after completion of subsurface activities at the site.

The natural gas line that was removed was of a coated steel construction. For age dating purposes, it is likely that the gas utility was installed prior to 1971. After 1971, plastic pipe was used for gas service hookups to residential and commercial buildings from the main lines. The steel line has had some repairs conducted on it in the past as indicated by sealant tape on different sections of the line.

Puget Sound Power and Light Company A Puget Power Utility vault is located in the north east corner of the property as shown on figure 3. The cover to the vault was not marked. During surface asphalt excavation, the vault cover was knocked loose. Some damage to the electric cables occurred. Puget Power was notified of the mishap. A representative of Puget Power visited the site and assessed that the coating on two of the three electric cables had been scraped.

Puget Power indicated to Petroleum Services that the cables could be fixed in the vault using a heat shrink wrap patch over the scraped portions of the cable. The damage did not appear extensive and Puget Power replaced the vault cover and left the site. At the time of this report, Petroleum Services has not been notified that the repairs have been made.

FIGURE 3  
 UTILITIES MAP

PETROLEUM SERVICES UNLIMITED

City of Bellevue: Side Sewer Permit #9138 It had been anticipated that, during the soils removal to the north of the office building and car wash, a portion of the side sewer to the building would be removed and replaced. Therefore, a side sewer permit from the City of Bellevue (COB) Department of Public Works and Utilities was obtained to work on the side sewer, which is shown on figure 3.

During excavation, the 6 inch side sewer pipe was located and exposed. It was discovered that the pipe could be excavated around and left intact. The soils around the sewer pipe were removed for the entire length it crossed the excavation.

On 24 September, 1991 prior to backfilling, the sewer pipe was inspected by the City of Bellevue. During the inspection, the city observed that the 6 inch sewer pipe was not in compliance with current City Codes. The current codes require the following:

- o Clean out traps within 2 feet of exterior walls of building;
- o Rubber connections between pipe sections.

Based on Petroleum Services not impacting or disturbing the sewer pipe, the City Inspector indicated that current codes did not have to be met. Special instructions were given regarding back filling the sewer pipe with pea gravel. These instructions were carried out and the sewer pipe was back filled on 24 September, 1991. A copy of the completed and signed side sewer pipe permit is attached to this report.

City of Bellevue Storm and Surface Water Utility: Clearing, Grading, Excavating or Fill Permit #CGLF-91-7706 Before initiating subsurface work, a clearing, grading, excavating or fill permit from the City of Bellevue Engineering Section was obtained. Due to the limited area being impacted, the City did not impose some of the typical requirements (Geotechnical Report, Engineer's stamp, Architect's stamp).

The excavation was backfilled and compacted on 1 foot lifts from the total depth of the excavation (depths varied from 4.5 to 7 feet) with a 1500 pound, walk behind "whacker". The impacted area was regraded and re-paved during the week of 14 October, 1991 by Emerald Paving of Kent, Washington.

City of Bellevue Right of Way Use Permit #2411 In order to use public right of ways for heavy equipment and transportation trucks, a use permit was obtained. Two licensed traffic control flaggers and proper traffic control signage were utilized throughout the onsite activities.

### Soils Removal

Soil removal activities were conducted on 23 and 24 September, 1991 under the supervision of a Washington Department of Ecology (Ecology) Underground Storage Tank Program Registered Site Assessor from Petroleum Services. Based on previous investigations (Geotech, May, 1991; Petroleum Services, July, 1991) conducted at the site, diesel concentrations above the Model Toxics Control Act Cleanup Regulations (MTCA from WAC 173-340) Method A Cleanup Levels were known to exist in the soil to the north of the Avis building. Shallow groundwater is found at between 5 and 6 feet below grade surface at the site. Therefore, the soils cleanup consisted of excavating field detectable contaminated soils down to groundwater.

During excavation activities, the following observations and actions were made:

- o A field notebook was maintained during all field activities;
- o A Photovac Microtip photo-ionization detector (serial #NA900031) was calibrated in accordance with manufacturer's specifications at the beginning of each work day;
- o The surface asphalt layer to the north of the Avis building was broken up, excavated and removed from the site. The asphalt was disposed of at Cadman Gravel Company in Redmond, Washington;
- o It had been anticipated that pea gravel would be encountered in the area to the north of the Avis building. The surface layer of crushed rock and gravels was excavated down to the pea gravel fill and was stockpiled in the western portion of the parking area. At the end of the stockpiling activities, a sample (PCA-EX1) was collected from the stockpile for characterization to determine if the approximately 30 yards of stockpiled material could be used as backfill material. The sample was analyzed by Ecology Method WTPH-HCID. Analytical results of the sample identified oil contamination and a subsequent analysis for total petroleum hydrocarbons by EPA Method 418.1 indicated petroleum hydrocarbons at 280 parts per million (ppm). Table 1 presents the results of the analyses. These materials were subsequently removed and transported to Hillsboro Landfill in Oregon for disposal;
- o Pea gravel at the site was stockpiled separately from the crushed rock and gravel fill material. Petroleum Service's interpretation is that the pea gravel was back fill in a former UST excavation. Thereafter, the pea gravel was used as back fill in the excavation after field detectable soils had been removed. A sample of the pea gravel (PCA-EX2-PEA) was collected and analyzed by EPA Method 8015. The results did not indicate the presence of

petroleum hydrocarbons. The analytical results are presented in Table 1.

Table 1

Excavated Surface Fill and Pea Gravel Analytical Results by Method WTPH-HCID, EPA Method 418.1, and EPA Method 8015 in parts per million (ppm)

Sample Number	Location	WTPH-HCID	418.1	8015
PCA-EX1	One location in excavated soils stockpile	*D	280	
PCA-EX2-PEA	One location in pea gravel back fill			ND

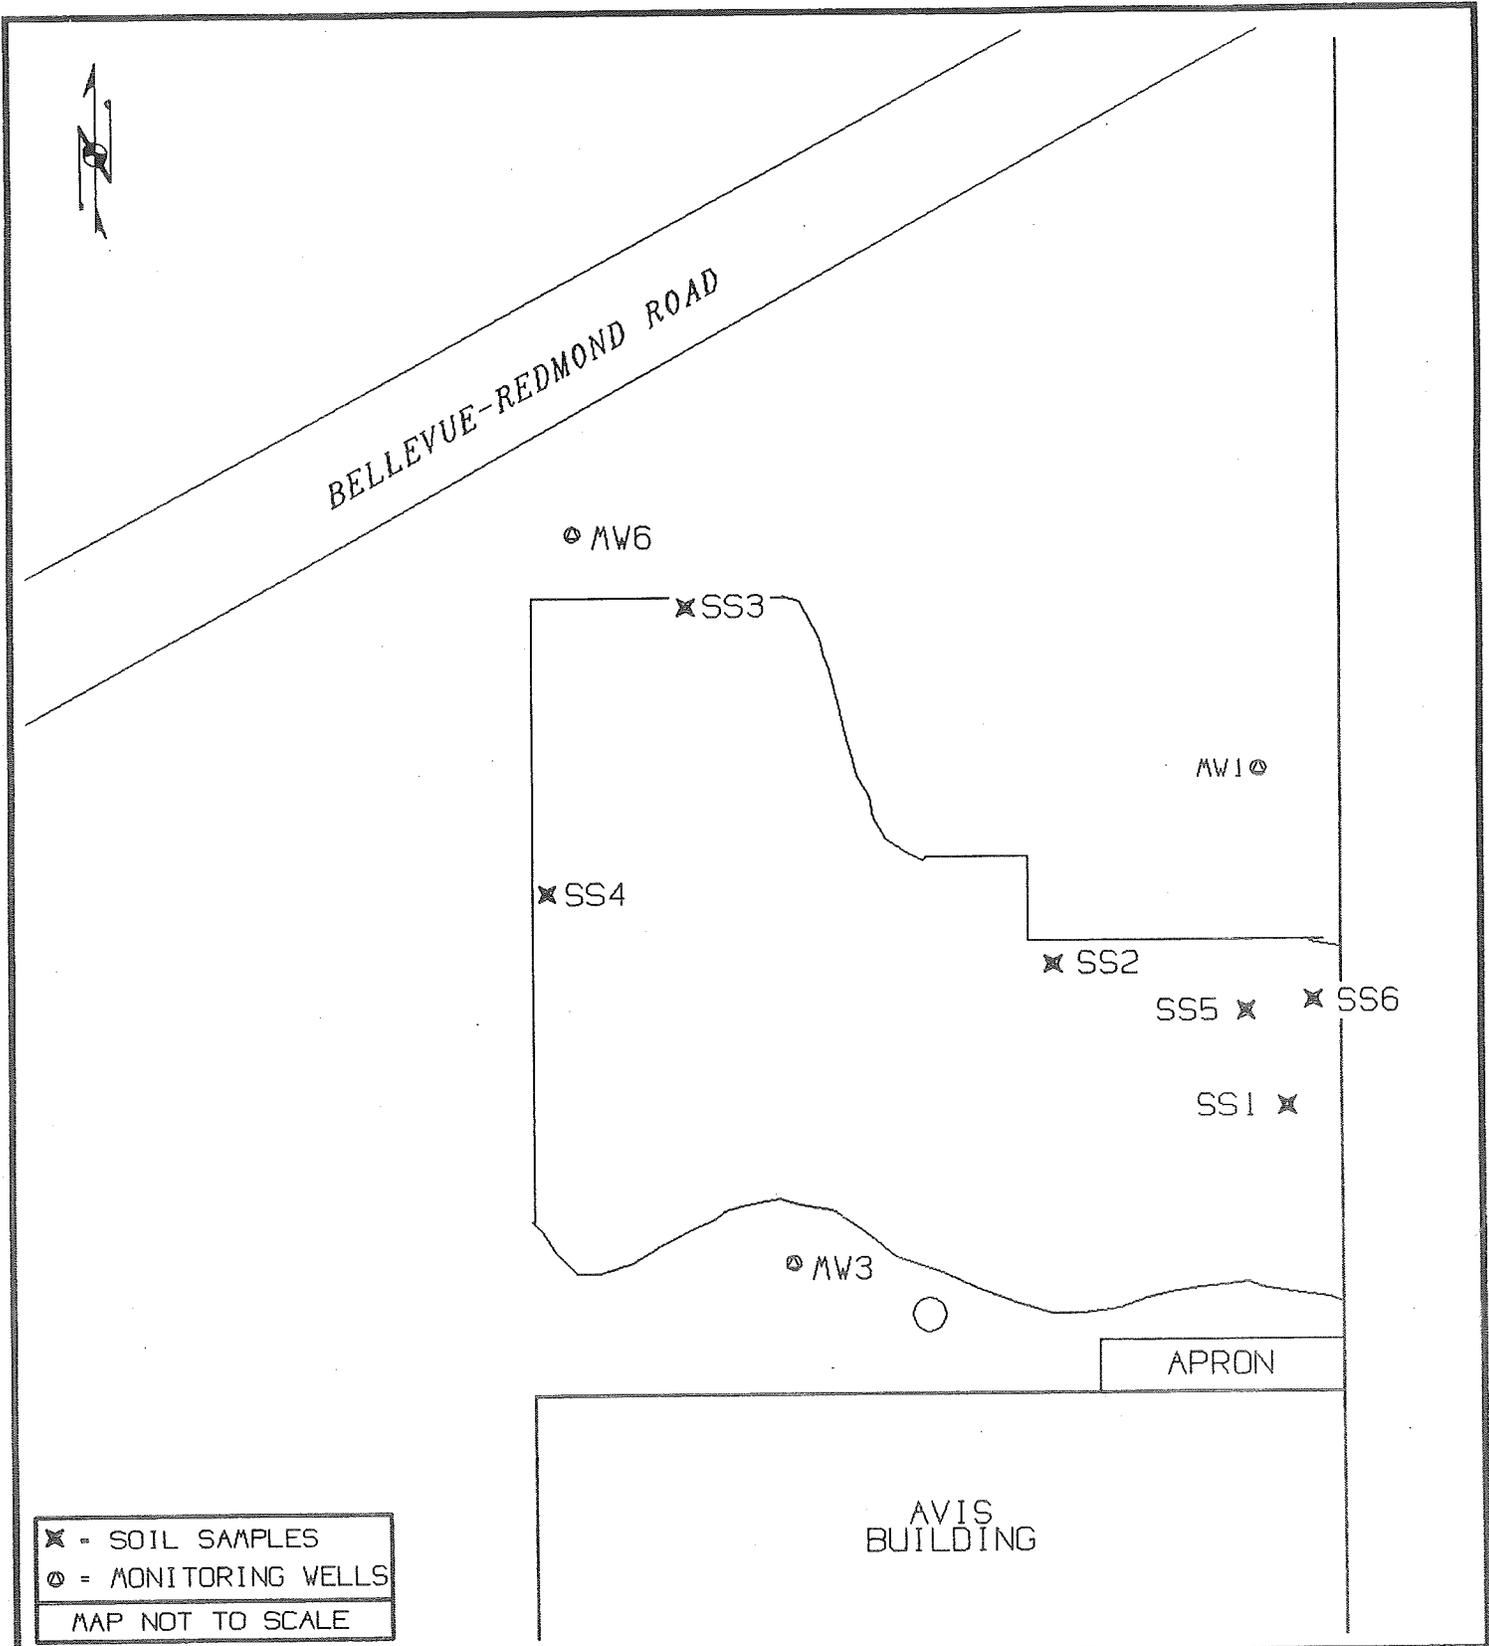

\*D = analytical method detected oil contamination  
ND = none detected at or above the method reporting limit  
A blank means no analysis was made

A copy of the analytical results with QA/QC data and chain of custody records is attached to this report;

o During excavation of the pea gravel, some large blocks of concrete and a floor hoist were encountered. The concrete was removed and disposed of at Cadman Gravel in Redmond, Washington. The floor hoist was removed and disposed of as scrap metal;

o Field screening methods (odor, color, photo-ionization detector measurements) were used to identify contaminated soils at the site. Field detectable contaminated soils were encountered adjacent to the pea gravel in the excavation. A verticle cut in the native soils was in contact with the pea gravel. This verticle cut was followed in a northerly and westerly direction at the site (see figure 4 for excavation boundaries). The majority of field detectable contaminated soils appeared to extend laterally approximately 2 to 3 feet into the native soils in the verticle cut;

o Soils were excavated to below the groundwater table on both the east and west sides of the side sewer that is located in the

AVIS SALES LOT  
 11969 BELLEVUE-REDMOND ROAD  
 BELLEVUE, WASHINGTON 98004

FIGURE 4  
 EXCAVATION AND SOIL  
 SAMPLE LOCATIONS

PETROLEUM SERVICES UNLIMITED

contaminated soils excavation area (refer figure 3). Groundwater that ponded in the excavation had a sheen;

- o The native clayey material and peat soils that exhibited field detectable contamination in the side walls were excavated and loaded into dump trucks for transport to and disposal at Hillsboro Landfill in Hillsboro, Oregon. The soils were disposed of under Hillsboro Landfill special waste permit #611. A copy of the permit is attached to this report;

- o The dump trucks were operated by Cornerstone Construction of Tacoma, Washington (ICC Permit #MC-225354). Five dump trucks totaling approximately 130 cubic yards of diesel contaminated soils were removed from the site. One dump truck load of the stockpiled oil contaminated soils was also removed from the site. All soils were transported to and disposed of at Hillsboro Landfill;

- o During excavation on 23 September, 1991 a 16 inch outside diameter concrete sewer pipe was uncovered. The sewer pipe had not been identified during utilities locating at the site (locate #91383960). As shown on figure 5, the pipe runs along the east property boundary adjacent to a concrete retaining wall that separates the Avis Sales Lot and the neighbor to the east, Bakker's Fine Dry Cleaning. Upon discovering the sewer pipe, Petroleum Services notified the City of Bellevue Storm and Surface Water Utility (SSWU);

- o A soil sample (PCA-SS1-6.5') was collected from beneath the 16" concrete pipe, because at the time of discovery of the pipe, it was not anticipated that the pipe would be removed. The soils from beneath the 16" pipe exhibited odors of petroleum and photo-ionization detector measurements of 90 ppm. See table 2 for analytical results;

- o Confirmation soil samples were collected from the cleanup excavation side walls after field detectable contaminated soils had been removed (refer figure 4 for soil sample locations). A discussion of soil sampling methods is attached to this report. Initially, the confirmation samples were analyzed for WTPH-HCID. This sampling protocol was modified to EPA Method 8015 for Diesel #2 because the initial WTPH-HCID samples and previous investigations indicated the presence of diesel in the soils. Table 2 presents the sample identification numbers, location, and the analytical results of the confirmation samples;

Table 2

Copies of the analytical results with QA/QC data and chain of custody records is attached to this report.

o During excavation activities, the 16 inch sewer pipe had been knocked loose at a bell joint in the pipe. Water was leaking from this joint and a temporary patch of clay from the site was used to stop the flow of water until the pipe could be inspected. On 24 September, 1991 during an attempt to patch another leak at another bell joint in the 16 inch sewer pipe, the pipe was observed to terminate without any capping in the excavation created during contaminated soils removal. The end of the pipe was approximately 15 feet north of the Avis Building. The pipe at this time was discharging a steady stream of water into the excavation. A sample (PCA-Sewer) of the water being discharged was collected for chemical analyses. Results of the analyses are discussed below. Further attempts to cap the sewer pipe were unsuccessful due to the volume of water that was running through the pipe. An estimate as to the volume of water that had discharged into the excavation on 24 September, 1991 was put at greater than 200 gallons but less than 500 gallons;

o The water sample collected from the 16" concrete pipe was analyzed for benzene, toluene, ethyl-benzene and xylenes by EPA

Method 8020 (BTEX) and for total petroleum hydrocarbons by EPA Method 8015 (TPH). Results of the BTEX analysis identified only meta- and para-xylene at 3 parts per billion (ppb). Results of the TPH analysis indicated the presence of gasoline and oil. Further discussion of the water being discharged is presented below;

o On 24 September, 1991 a City of Bellevue SSWU Inspector visited the site to observe the 16 inch sewer pipe. Upon the inspection, it was determined that the sewer is an abandoned line and is not shown on any current Bellevue sewer maps. The timing of the abandonment of the pipe as not been determined.

o Further investigation with the City of Bellevue Inspector revealed the following: There is a surface water catch basin located in the north east corner of the property. This catch basin acts as a storm water drain for the Bakker's Fine Dry Cleaning property located to the east of the Avis property (refer figure 2). A test to see if the 16 inch sewer pipe was connected to the catch basin was conducted by banging the 16" pipe in the excavation and listening for the repercussion at the catch basin. This test indicated that the catch basin and 16" sewer pipe were connected. To verify the connection, a dye test was conducted by dumping approximately 40 gallons of green dyed water into the catch basin and awaiting the discharge from the 16" pipe. This test proved conclusively that the catch basin and 16" pipe were connected. It was also noted that the 16" pipe was plumbed to drain to the south toward NE 8th Street, i.e. away from the catch basin and onto the Avis property;

o The water discharging from the 16" pipe was coming from an unknown source. This observation was evidenced by the fact that the surface water catch basin in the northeast corner of the lot was dry, but water was discharging from the pipe. Therefore, a decision was made to excavate and remove the 16" concrete pipe in an attempt to identify the source of the water;

o On 25 September, 1991 the 16" concrete pipe was excavated in a northerly direction. Soils identified as having diesel concentrations at 2,100 ppm (PCA-SS1-6.5') below the pipe were excavated in an easterly direction to the concrete retaining wall on the property boundary between the Avis Sales Lot and Bakker's Fine Dry Cleaners;

o Upon further excavation of the 16" concrete pipe in a northerly direction, field detectable contaminated soils ended and only the 16" pipe was excavated and removed;

o After excavation in this area, confirmation samples were collected from the clays in the east side wall and from the floor of the excavation in native peat soils. The sample locations are shown on figure 4. The samples were analyzed for diesel #2 by Modified EPA Method 8015. Table 3 presents the sample identification numbers, location, and the analytical results. Analytical results of the samples indicate that the contamination identified in PCA-SSI-6.5' was removed by this subsequent excavation.

ND = none detected at or above the method reporting limit

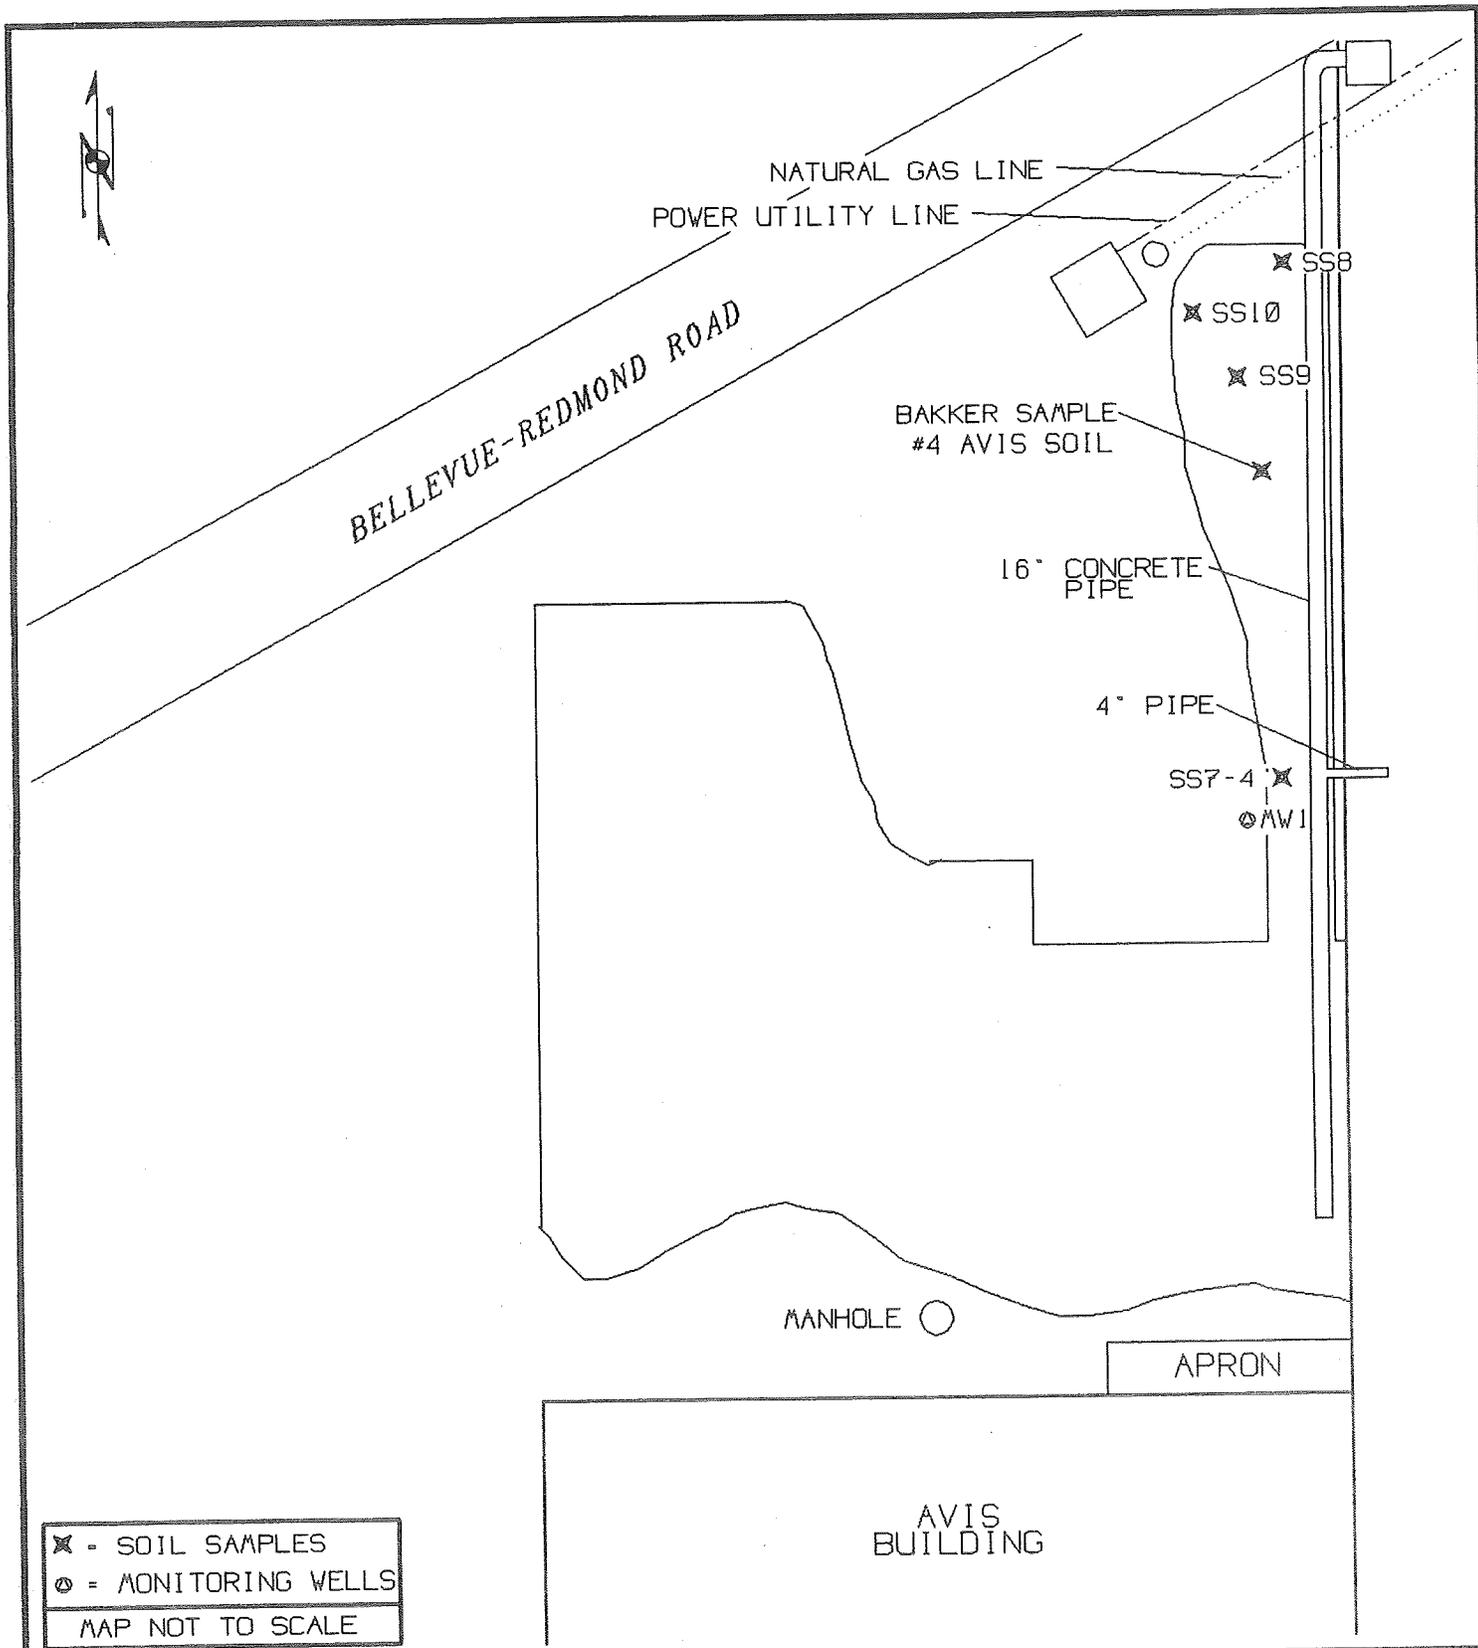

Copies of the analytical results with QA/QC data and chain of custody records is attached to this report;

Based on the information presented above, diesel contaminated soils to the north of the Avis building have been removed with the exception of the north side wall (sample PCA-SS3-5.5') of the cleanup excavation. Diesel contaminated soils remaining in the north side wall are below MTCA Method A cleanup levels.

#### 4" Concrete Pipe and Mineral Spirits Contaminated Soils

Upon completion of the soils removal from below the 16" concrete pipe, excavation of the 16" concrete pipe continued. The following observations and actions were made on 25, 26 and 27 September, 1991:

o As shown on figure 5, approximately 40 feet north from the Avis building, a 4" concrete pipe was connected to and discharging a steady stream of water into the 16" concrete pipe.

PETROLEUM SERVICES UNLIMITED

The 4" pipe trends directly east and exits from the Bakker's Fine Dry Cleaners' property. The water was coming from an as yet unidentified source and was notably warm and clear. A sample of the water discharging from the 4" pipe was collected for chemical analyses. Results of the analyses conducted are discussed below;

- o Upon collection of the water sample, a test plug was inserted into the 4" pipe to seal it from discharging water. This plug proved to be unsuccessful as the soils around the 4" pipe became saturated with water and started seeping into the 16" concrete pipe excavation, indicating the 4" pipe had some cracks or leaks upstream from its outlet;

- o A City of Bellevue SSWU Inspector observed the water discharging from the 4" pipe. At this time, the inspector indicated that a plug could be placed into the 16" pipe at the catch basin at the northeast corner of the lot. He was satisfied that the source of the water discharging from the 16" pipe had been found;

- o Bakker's Fine Dry Cleaners had become an active observer of the site activities after discovery of the 4" concrete pipe. In communications on 25 September, 1991 with Ernie Bakker of Bakker's Fine Dry Cleaning, it was learned that the 4" pipe was connected to floor drains in the laundry processing rooms and steam boiler room in the Bakker's dry cleaning facility;

- o On 26 September, 1991 at the request of Mr. Bakker, Petroleum Services assisted with the collection of a second sample of the water discharging from the 4" pipe. This sample was taken by a representative of Bakker's. Bakker subsequently provided the test results, which are reproduced in Table 4 (see #1 Bakker Dr). Bakker is responsible for the chain of custody and results on this sample. The Bakker sample and the earlier sample (PCA-4" H20), were collected about 23 hours apart;

- o Water sample PCA-4" H20, collected from the 4" concrete pipe, was analyzed for BTEX by EPA Method 8020, for TPH by EPA Method 8015, and for chlorinated solvents by EPA Method 8010. Results of the BTEX analysis did not identify any of the BTEX group of compounds. Results of the TPH analysis did not detect any petroleum hydrocarbons. Results of the chlorinated solvents analysis indicated the presence of trichloroethylene at 11 ppb and tetrachloroethylene at 1,600 ppb. Table 4 presents these results;

- o The Bakker water sample (#1 Bakker Dr), from the 4" pipe was analyzed for BTEX by EPA Method 8020 and TPH by EPA Method 8015 by AmTest Laboratory in Redmond, Washington. Results of the TPH analysis did not detect any petroleum hydrocarbons. The BTEX volatiles analysis results on the water sample indicated that

assorted halogenated compounds were detected. They included isomers of di, tri, and tetrachloroethane. No quantitation for the halogenated compounds were performed, but the levels were noted by the lab to be significant. Results of the analyses are presented in table 4.

Table 4

Copies of the analytical results for each sample with QA/QC data and chain of custody records is attached to this report.

o Native soils from beneath the 16" pipe in the vicinity of where the 4" pipe was connected had a petroleum odor with photo-ionization detector measurements of 92 ppm. The odor was dissimilar to the diesel odors emanating from the previously excavated soils. A sample (PCA-SS7-4') of the soils was collected for chemical analysis by WTPH-HCID from the location shown in Figure 5. Table 5 presents the sample number, location and analytical results of the sample collected;

o Results of the WTPH-HCID analysis identified the presence of mineral spirits. Although there was no apparent source on the Avis property for this contamination, a decision was made to excavate the mineral spirits contaminated soils as close to the property line as possible;

o In addition, a representative for Bakker's collected a soil sample (#4 Avis Soil) from the soils beneath and to the north of where the 4" pipe exits the Bakker property and submitted it for chemical analyses at AmTest laboratory in Redmond (refer figure 5). This sample was taken approximately 12 feet from where sample PCA-SS8-6' was collected. Results of the analysis are presented in table 5;

o On 26 September, 1991 mineral spirits contaminated soils were excavated in a northerly direction along the property boundary between the Avis Sales Lot and Bakker's Fine Dry Cleaning. Grey green discolored soils (with photo-ionization detector measurements of 12 to 316 ppm) were noted to slope down in the subsurface from the concrete retaining wall on the property boundary and bisect the 16" concrete pipe. The discolored soils then continued in a nearly verticle contact with non-discolored soils to the 7 foot depth. These field observations indicate that the mineral spirits contamination spread to the Avis property from the Bakker property;

o The 16" pipe and field detectable contaminated soils were excavated in a northerly direction until the Washington Natural Gas line was encountered. No further excavation was done in this direction due to the gas line and the underground electrical utility (refer to figure 5). Approximately 20 yards of the mineral spirits contaminated soils were removed and subsequently disposed of at Hillsboro Landfill in Oregon. The disposal was delayed for several days until this unexpected contamination could be adequately characterized and assesses by the disposal facility;

o Upon completion of this excavation, confirmation samples were collected from the east (PCA-SS8-6') and west (PCA-SS10-4.5) side walls. The sample locations are shown on figure 5. The samples were analyzed for TPH as mineral spirits by Modified EPA Method 8015. Table 5 presents the sample identification numbers, location, and the analytical results;

o Subsequent actions were taken by Bakker's Fine Dry Cleaners to re-route the water being discharged into the floor drains in the Bakker's cleaning processing and steam boiler facility. On 9 October, 1991 Petroleum Services was notified by Bakker's that the floor drains had been permanently plugged;

o On 14 October, 1991 the 4" pipe exposed on the Avis Sales Lot was plugged with concrete by Petroleum Services.

#### Groundwater Characterization

In addition to the soils removal, one groundwater monitoring well (MW6) was installed on September 25, 1991 in an inferred down gradient direction from the other monitoring wells existing at the property. The inferred down gradient direction was based on Geotech Consultant's groundwater investigation and subsequent survey and water level measurements study. The approximate locations of the monitoring wells installed by Geotech Consultants and MW6 are presented in figure 6. The monitoring

GROUNDWATER WELL  
LOCATIONS

PETROLEUM SERVICES UNLIMITED

well was installed to further characterize and assess the extent of petroleum contaminated groundwater known to exist at the site.

Mc-Garrett Drilling of Seattle, Washington was subcontracted to perform the monitoring well installation. Drilling was conducted using a BRATT 22R Mobile Drill Rig utilizing 6 inch diameter hollow stem augers. All down hole drilling equipment and monitoring well construction materials were steam-cleaned prior to drilling, sampling and installation.

A field notebook was maintained for the drilling, sampling and monitoring well construction activities. The monitoring well installation diagram with soil descriptions has been reproduced and is attached to this letter report. Drill cuttings were placed directly into the existing soils stockpile on the site and later disposed of at the Hillsboro Landfill.

Sampling Methods Soil Samples were collected from the monitoring well boring using a standard 18" long x 2" diameter stainless steel split spoon advanced using standard penetration test procedures in accordance with ASTM Method 1586. The sample was split with a clean, decontaminated, stainless steel knife. A portion of the sample was then placed into a laboratory cleaned, 8-ounce glass jar with a Teflon-lined cap. Field screening techniques were used to screen the soils for the potential presence of petroleum in the soil samples. The photo-ionization detector did not indicate the presence of volatile organic compounds in any of the samples collected. A description of the soil sample in accordance with ASTM D2487-85 was entered into the field notebook. The soil descriptions and sample collection depths are provided on the monitoring well installation log that is attached to this report.

The samples were hand delivered to Analytical Services, Inc. in Redmond, Washington under chain-of-custody procedures. Based on field screening techniques and depth to groundwater, only one sample (PCA-MW-3-3.5') was analyzed.

The sample was analyzed for diesel #2 by Modified EPA Method 8015. The remaining two soil samples were archived in the event the analytical results identified concentrations above MTCA Method A clean-up levels. However, the analytical results showed no detection.

Soil Sample Analytical Results Table 6 presents the sample identification number, location, and the analytical results.

Table 6

Monitoring Well Soil Sample Analytical Results for

ND = none detected at or above the method reporting limit

A copy of the analytical results with QA/QC data and chain of custody records is attached to this report.

Monitoring Well Installation The monitoring well was installed in accordance with WAC 173-360. During drilling of the monitoring well boring, moist soils were encountered at the 5 foot depth and saturated soils were encountered at the 8.5 foot depth. Groundwater elevation at the site is between 5 and 6 feet below grade level as was indicated in the existing monitoring wells. Therefore, the monitoring well was drilled to 15 feet to allow for adequate coverage of the saturated zone.

The monitoring well was constructed as follows:

Four feet of blank two-inch diameter, Schedule 40, threaded polyvinyl chloride (PVC) casing was used. Ten feet of two-inch, Schedule 40, threaded PVC pipe with 0.020-inch slots was used as screen to straddle the groundwater table. The screen extended from four feet to fourteen feet. A six inch bottom sump of two-inch, Schedule 40, threaded PVC was used. Three each 100-pound bags of Colorado silica sand were used as sand pack around the screen. The sand pack extended from the bottom of the monitoring well installation boring to three feet from the surface. A seal was placed over the sand pack with 2.5 each 50 pound bags of Wyo-Ben EnviroPlug bentonite chips. The seal extended from three feet to 16 inches below grade. A concrete seal was then used to the surface. A flush monument cover was used to secure the well. Refer to figure 7 for the groundwater monitoring well installation diagram.

11969 BELLEVUE-REDMOND ROAD  
BELLEVUE, WASHINGTON 98004

FIGURE 7

TYPICAL MONITORING  
WELL

PETROLEUM SERVICES UNLIMITED

Well Development The monitoring well was developed on 14 October, 1991. The delay between monitoring well installation and well development was to ensure proper setting of the seals and materials used to construct the well.

The well was developed by purging three casing volumes of water using a decontaminated, stainless steel bailer. After each purge, field parameters (pH, conductivity and temperature) were measured. The development process was completed after three casing volumes had been purged and the field parameters measurements were within ten percent of the previous casing volume's measurements. It should be noted that MW6 was slow to recharge after each casing volume purge. Table 7 presents the field parameters measurements for MW6.

Table 7

MW6 Monitoring Well Field Parameters Measurements

Time	Gallons Purged	Temperature	pH	Specific Conductivity
1810	2	66.2	8.41	1.02 x 1
1818	5	65.6	7.95	1.02 x 1
1848	7	61.8	8.02	1.03 x 1

In addition to developing and sampling MW6, two monitoring wells installed by Geotech Consultants (MW1 and MW3) in the area to the north of the Avis building were purged and sampled (refer figure 6). The stainless steel bailer was decontaminated between each well.

It should be noted that MW3 was slow to recharge and was purged to dryness after one casing volume of water was extracted. MW3 was then sampled after sufficient water had recharged the monitoring well. Table 8 presents the field parameters measurements for monitoring well MW1 and MW3.

Table 8

MW1 and MW3 Monitoring Well Field Parameters Measurements

MW	Time	Gallons Purged	Temperature	pH	Specific Conductivity
MW1	1537	2.5	88	8.06	0.98 x 1
	1614	5.0	86.4	8.40	1.00 x 1
	1627	7.5	82.6	8.47	1.00 x 1
MW3	1720	1	71.2	8.82	1.02 x 1

Sampling After each well had recovered from the final purge, the groundwater was sampled. The groundwater samples were collected with the decontaminated stainless steel bailer used to purge each monitoring well. Groundwater was transferred from the bailer into four 40-ml VOA vials and into a 1-Liter amber glass sample container. The VOA vials were collected for BTEX analysis by EPA Method 8020 and for chlorinated solvents by EPA Method 8010. The amber glass jar was collected for total petroleum hydrocarbons (TPH) analysis by EPA Method 8015.

Analytical Results The water samples were hand delivered under chain-of-custody procedures at the end of the sampling event to Analytical Services, Inc. in Redmond, Washington for chemical analyses. Table 9 presents the results of the BTEX and TPH scan. The results of the chlorinated solvents analyses are presented in table 10 in the Summary and Recommendations section of this report. In addition, table 9 presents the analytical results of the May, 1991 water sampling event conducted by Geotech Consultants for monitoring wells MW1 and MW3, and shows the MTCA Method A Cleanup Levels.

Groundwater from MW1 exhibited higher temperatures than groundwater from MW3 and MW6. Reasons for the higher temperature are unknown. Explanations for the anomaly can possibly be attributed to the proximity of MW1 to the 4" and 16" concrete pipe discharge locations. The water that discharged from the 4" pipe from Bakker's dry cleaning processing room and steam boiler room was noted as being warm when handled. This factor, and MW1's proximity to the 16" concrete pipe may have resulted in increased groundwater temperatures in this area of the site.

#### Summary and Recommendations

Based on the information and data presented herein, Petroleum Services summarizes the following regarding the area to the north of the Avis building at the Avis Sales Lot located at 11969 Bellevue-Redmond Road in Bellevue, Washington:

Based on previous subsurface investigations at the Avis Sales Lot, diesel contamination has been identified in site soils to the north of the existing building. The source of the contamination is at present unknown, but based on the observed subsurface conditions, an area of pea gravel fill bounded by a verticle cut in the native soils appears to be a former UST excavation. As indicated by field observation and confirmation sampling, the extent of diesel contamination above the groundwater table was isolated to within a few feet of the native soils in the verticle cut.

The extent of the diesel contamination has been removed with the exception of a pocket of soils at the northern portion of the cleanup action excavation. This pocket is below MTCA Method A Cleanup Levels (WAC 173-340-740). Further sampling was conducted approximately 6 feet north of this area during drilling and monitoring well MW6 installation. A soil sample collected from the 3.5 to 5 foot depth in the boring did not detect petroleum hydrocarbons. This would indicate that diesel contaminated soils do not penetrate into native soils beyond the perimeter of the cleanup action excavation.

Diesel contaminated soils adjacent to the north wall of the Avis building remain at the site. This contamination was identified during Petroleum Services extent of contamination investigation in July 1991. During this exploratory work, a sample (PCA-TP1-2) was collected using a decontaminated stainless steel hand auger in the side wall of a test pit at the 4 foot depth. Analytical results for the sample by EPA Method 8015 indicated diesel contamination at 2200 parts per million. This area of contamination was not excavated because of the potential for structural damage to the Avis building. Due to the observed low permeability characteristics of the clayey native material in the subsurface at the site, the extent of this diesel contamination is not anticipated to extend a great distance beneath the building.

Groundwater on the north portion of the Avis Sales Lot has been confirmed to contain gasoline and the BTEX group of compounds. This was confirmed by chemical analyses during Geotech Consultant's May, 1991 site investigation. Based on analytical results of groundwater samples collected during this work, contaminant levels in groundwater from monitoring wells MW1 and MW3 have decreased in the 5 months since the May, 1991 sampling event. The decreases indicated are to below MTCA cleanup levels for all constituents except gasoline in MW3 at 3 ppm. This concentration has decreased by about an order of magnitude since the May, 1991 results.

An analysis for TPH by Modified EPA Method 8015, indicated mineral spirits contamination at 5 ppm in MW3. Mineral spirits contamination was not identified in MW1 or MW6.

Groundwater flow and gradient were not part of the scope of work for this project. Monitoring well MW6 was placed in an inferred down gradient direction based on Geotech Consultant's previous study of the Avis Sales Lot. MW6 was constructed in accordance with WAC 173-360, and developed and sampled in accordance with generally accepted professional practices. Analytical results from the BTEX and TPH analyses conducted on the groundwater sample from MW6 identified only benzene at 22 ppb. This is above MTCA cleanup levels.

The discharge of water from the 16" abandoned sewer pipe through the 4" concrete pipe from Bakker's property may have contributed to an artificially high groundwater gradient in the area to the north of the Avis building at the site. Water was observed to discharge at a rate of greater than 200 gallons on 24 September, 1991 into the excavation. The source areas for this discharge (floor drains in Bakker's laundry processing rooms and steam boiler room) have subsequently been plugged. Continued groundwater level monitoring would be necessary to support this theory.

Based on this information, Petroleum Services recommends that further groundwater gradient study be conducted to determine groundwater flow direction at the site. Petroleum Services further recommends that a program of continued monitoring of groundwater at the site be conducted to track the effect of soils removal on groundwater contamination.

A City of Bellevue 16" diameter abandoned concrete sewer pipe was discovered during the Cleanup Action. A steady flow of water was discharging from the pipe and subsequent actions to excavate and identify the source of the water were conducted. The City of Bellevue was notified and became involved with decisions made regarding the abandoned pipe. The pipe was not on any researched sewer maps and the timing of its abandonment has not been determined.

Excavation of the 16" concrete pipe led to the discovery of a 4" concrete pipe that was plumbed into the 16" pipe and responsible for discharging water onto the Avis Sales Lot. The 4" pipe was observed to exit Bakker's Fine Dry Cleaning property located to the east of the Avis Sales Lot. Upon discovery of the 4" pipe and water discharge, samples of the water were collected by Petroleum Services and a representative for Bakker's. Analytical results of the water samples indicated the presence of chlorinated organic compounds, specifically, trichloroethylene at 11 ppb and tetrachloroethylene at 1600 ppb. The source of water was determined to be laundry processing rooms and a steam boiler room at the Bakker's facility. The duration of discharge of chlorinated organic compounds from Bakker's Fine Dry Cleaning facility is unknown. Also unknown is whether other constituents may have been discharged at prior times.

Based on this development during the work, groundwater from the monitoring wells to the north of the Avis building were also sampled for chlorinated organic compounds by EPA Method 601/8010. Table 10 presents the results of the groundwater analysis.

Table 10

Groundwater Sample Analytical Results  
by EPA Method 601/8010  
in parts per billion (ppb)

Analyte*	MW1	MW3	MW6	MTCA Method A Clean Up Levels for Groundwater
1,1-Dichloroethane	34	ND	3	
Trichloroethylene	9	ND	ND	5
Tetrachloroethylene	7	ND	ND	5

\* = chlorinated organic compounds identified in analysis  
ND = none detected at or above the method reporting limit

A copy of the laboratory analytical results with chain of custody records is attached to this report.

MW1 is located in close proximity to the area where the 4" pipe was discharging water. MW1 is located in close proximity to where the 16" concrete pipe that was fed by the 4" pipe was discharging into the Avis property from Bakker's Find Dry Cleaning's laundry processing room and steam boiler room. Water from this source has been confirmed by chemical analyses from two independent laboratories to contain detectable levels of chlorinated organic compounds. This information supports a conclusion that Bakker's Fine Dry Cleaning is responsible for chlorinated organic compounds contamination in groundwater at the Avis Sales Lot.

Mineral spirits contaminated soils were identified in the north east corner of the site adjacent to the Bakker's Fine Dry Cleaners' property. The Avis property does not appear to be a source for this contamination. Field observations indicate that it spread onto the Avis site from the Bakker's property.

The full extent of the mineral spirits contaminated soils in the north east corner of the Avis site was not removed for these reasons:

- o further excavation in a northerly direction was unsafe because the contamination extended beneath the Washington Natural Gas pipeline and the Puget Sound Power and Light Company underground electric cables in the north east corner of the lot and;

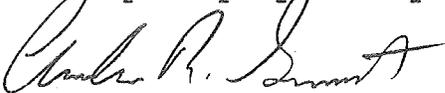

o the contamination appeared to cross Bakker's Fine Dry Cleaning property boundary to the east.

### Closing Statement

This work was performed, and this report prepared, in accordance with generally accepted professional practices for the nature and conditions of the work performed. It is intended for the use of Avis Rent-A-Car for specific application to the Avis Sales Lot in Bellevue, Washington. No other warranty, express or implied, should be understood.

The observations, interpretations, and recommendations presented in this report are based on the data obtained from the samples, and other data contained herein and on the assumption that subsurface conditions do not vary from those found during the course of the investigation and cleanup work. If any variations for this project are encountered during any further investigation or excavations for this project, Petroleum Services should be notified so that supplemental interpretations can be made. The observations and interpretations of this report are intended only for the area investigated and are inferred to adjacent areas.

		NO	DNS	DS	EXEMPT	

Permission is hereby given to do the following described work, according to the conditions hereon and according to the approved plans and specifications pertaining thereto, subject to compliance with Ordinance 2799, Chapter 23.76 of the Bellevue City Code.  
 This permit pertains only to the above-cited provisions of the Bellevue City Code pertaining to clearing, grading, fill or excavations. Additional authorization from other public agencies may be necessary for work to be accomplished under this permit.  
 The Permit Authority reserves the right to make additional restrictions for conditions or revoke this permit if deemed necessary by the Permit Authority to correct and/or eliminate hazardous conditions or bring conditions into compliance with this Code.  
 The City of Bellevue will not be held liable for any property damage which might occur as a result of work to be accomplished under this permit.

DESCRIPTIONS OF WORK TO BE PERFORMED IS AS FOLLOWS: ASPHALT IN AREA TO BE EXCAVATED WILL BE REMOVED AND DISPOSED; PETROLEUM CONTAMINANTS WILL BE EXCAVATED AND REMOVED; INERT BACKFILL WILL BE PUT INTO EXCAVATION; BACKFILL MATERIAL WILL BE COMPACTED 95% (PROCTOR TEST) ON 1' LIFTS STARTING @ 4' BELOW SURFACE GRADE; BACKFILLED EXCAVATION WILL BE COVERED W/ 3" ASPHALT CAP AND SEALED TO EXISTING ASPHALT; UTILITIES TO BUILDING (GAS, SANITARY SEWER) WILL BE RE-INSTALLED AND INSPECTED PRIOR TO RE-SURFACING

I certify that I am a currently registered contractor, doing business under the name of PETROLEUM SERVICES UNLTD, INC. and my Contractor Reg. No. is REIADSHUOCA  
 Signed John Holt  
 I certify that I am exempt from the requirements of the Contractor Registration Law under Sec. 3 Chap. 126, Laws of 1987.

PERMIT PROCESSING

Clearing and Grading Permit Long Form

C. Plans and Drawings

1. Survey: See figure 1. Property lines are generally defined by side walk edges to the north and south on N.E. 8th Street and Bellevue Redmond Road and by a concrete retaining wall to the east that separates the property from the neighbors property. The site is essentially flat with a slight grade sloping from east to west. There is a depression in the north west portion of the site for surface drainage.

2. Site Plan: See figure 1. The western portion of the site is not shown in figure 1 as this area of the site will not be impacted by the work to be performed. There is one building at the site that is used for offices and a car wash. The remainder of the property is used as a car lot for auto sales. There is one known underground storage tank at the site that is used to store gasoline for auto fueling.

3. Grading Plan: See figure 1. The site is essentially flat with a slight grade sloping from east to west. The excavating will temporarily impact the surface grade at the site, but upon completion of backfilling and resurfacing, the grade will be restored.

6. Temporary Erosion and Sedimentation Control Plan: See figure 1. During excavation, a limited soils stockpile will be generated. The stockpile will consist of pea gravel currently located in the area to be excavated. The stockpile will be lined with 6 mill plastic and covered with 6 mil plastic at the end of each work day. The stockpile will be bermed with hay bales on the down gradient side toward the north west.

## Soil Sample Collection Methods

Soil samples were collected by two different methods during confirmation sampling of the excavation. All confirmation samples were collected by the Ecology registered site assessor. The two methods were as follows:

- o One method used to collect samples was by entering the excavation. This procedure was used when entering the excavation was determined to be safe with the side walls sloped to prevent cave ins. The sampling location was based on areas where field detectable contamination had been removed. A decontaminated, stainless steel hand trowel was then used to scrape the side wall of surface material. The freshly exposed soils were then placed into laboratory prepared, 8 ounce sample containers with Teflon lined lids;

- o The other method used involved using the backhoe bucket. The sampling location was based on areas where field detectable contamination had been removed. The backhoe bucket was used collect soils from the desired location and these soils were then brought to the surface. The surface soils in the bucket were then quickly scraped away using a decontaminated, stainless steel trowel. The freshly exposed soils were then placed into laboratory prepared, 8 ounce sample containers with Teflon lined lids.

All of the samples were collected while using clean vinyl gloves that were disposed of after sample collection.

After sample collection, the sample containers were placed into an iced cooler under chain-of-custody procedures for transport to the laboratory.

The decontamination procedures for the sampling equipment (trowels) were conducted using the following procedures:

- o TSP, Joy detergent and tap water wash;
- o Tap water rinse;
- o distilled water rinse.

**Re: Avis Rent-A-Car Property in Bellevue, WA**

Dear Mr. Hickey:

On behalf of our client, Avis Rent-A-Car Systems, Inc., I am enclosing a report prepared by Pacific Northern Environmental Corp. (PNE) concerning the investigation and cleanup of Avis's property at 11969 Bellevue-Redmond Road in Bellevue, Washington.

Your records should indicate that on June 12, 1989 we filed a report prepared by Landau & Associates, Inc. concerning the removal of two underground storage tanks at this site. That tank removal and related site remediation occurred on the south side of the existing building on the site. The remediation work covered by the PNE report occurred on the north side of the building and does not appear to have any relation to the previous removal work.

The investigations and cleanup described in the PNE report were instigated by a contemplated sale of the property. That sale is still pending. The potential purchaser has been provided with a copy of the enclosed report.

As indicated in the PNE report, three contamination problems were encountered and dealt with during the course of PNE's work. None of these had any relation to Avis's current or past operations at the site. All three problems appear to be related to either prior gas station operations at the site or contamination emanating from off-property sources. The three matters are: (1) diesel contaminated soils north of the building, most likely associated with a previously removed underground storage tank; (2) a truncated and uncapped abandoned 16" sewer pipe, into which was plumbed a 4" pipe from the floor drain of the neighboring drycleaning facility

[06266-0003/SL913510.038]

Joseph M. Hickey  
December 17, 1991  
Page 2

to the east; and (3) mineral spirits contaminated soil in the far northeast tip of the property, which appears to have originated from the drycleaning facility property. The investigation and remediation of each of these matters is fully discussed in the PNE report.

PNE recommends that an additional study be conducted to define more accurately the groundwater flow direction at the site and to monitor the effect of the soils removal on the groundwater contamination that was detected.

Avis is reviewing PNE's recommendations and expects to be discussing them with the potential purchaser of the property. Avis will report to the Department of Ecology on decisions reached regarding further actions at the site. In the interim, should you have any questions regarding the site or the PNE report, please give me a call.

Sincerely yours,

Douglas S. Little

# FUEL TANK INSTALLATION CO., INC.

## UNDERGROUND STORAGE TANK REMOVAL AND SOIL SAMPLE SUMMARY REPORT

October 18, 1999

Re: Bakker's Fine Drycleaning, 12002 NE 8th Street, Bellevue, WA.

This report presents the site assessment services performed by myself, Thomas H. Anderson, relating to the 6000 gallon steel double wall underground storage tank removal, soil samples and laboratory report at the above referenced property.

### PURPOSE

The purpose of this work was to assess the conditions of the adjacent soils following the removal of the 6000 gallon underground storage tank (UST). This work was accomplished by Fuel Tank Installation Company, Inc. (FTICI). This work included removal of the UST and collection of soil samples from the area of the excavation to be delivered to a laboratory for analysis. This report is prepared to present the events as they occurred and to help illustrate the conditions present at the site.

### SCOPE OF INSPECTION

The scope of services included: removal and disposal of the 6000 gallon UST, visual and olfactory inspection of the soil in the vicinity of the excavation, collection of soil samples for analysis of Total Petroleum Hydrocarbons (TPH) by an approved laboratory using methods NWTPH-Dx; and preparation of this written report.

### SITE DESCRIPTION

The subject site is located at 12002 NE 8th Street, Bellevue, WA., see F-4 on Vicinity Map (attachment #1). The property is used as a drycleaning business. The UST was located on the north side of the building (attachment #2). The UST was used to store stoddard solvent.

### PROJECT DESCRIPTION AND SITE OBSERVATIONS

On October 11, 1999 the UST was inerted by Marine Chemist, Certificate #43992 (attachment #3). The UST was then excavated and removed. The UST was disposed of

in the city of Seattle in a legal manner. Three grab soil samples were collected in prepared four ounce sampling jars by FTICI personnel at the South-1, West-2 and East-3 areas of the excavation site just above the water line (see attachment #2). A chain of custody was completed at the time of transport (attachment #4). Visual and olfactory observations by FTICI personnel noted that no obvious signs of petroleum contaminated soil existed. The soil samples were taken to Friedman & Bruya, Inc. for analysis (attachment #5 A&B). Laboratory test results of the soil samples collected from the excavation area confirmed that the soils tested were well below the Model Toxics Control Act (MTCA) Method A\* clean up guidelines of 200 parts per million (ppm). The UST site was backfilled with clean fill material and compacted.

#### LIMITATIONS

This report has been prepared using generally accepted professional practices, related to the nature of the work accomplished, in the same or similar localities, at the time the services were performed. This report was prepared for the use of Bakker's Fine Drycleaning, 12002 NE 8th Street, Bellevue, WA. This report should not be construed to represent a legal opinion. No other conditions, expressed or implied, should be understood.

If there are any questions concerning this information please call me at 206-244-8020.

*Thank you for this opportunity to do business with you!*

Sincerely,

Thomas H. Anderson

In the event of any physical or atmospheric changes adversely affecting the gas-free condition of the above spaces, or if in any doubt, immediately stop all work and contact the undersigned Marine Chemist.

**QUALIFICATIONS:** Transfer of ballast or manipulation of valves or closure equipment tending to alter conditions in pipe lines, tanks or compartments subject to gas accumulation, unless specifically approved in this Certificate, requires inspection and endorsement or reissue of Certificate for the spaces so affected. All lines, vents, heating coils, valves, and similarly enclosed appurtenances shall be considered "not safe" unless otherwise specifically designated.

STANDARD SAFETY DESIGNATIONS

**SAFE FOR WORKERS:** Means that in the compartment or space so designated, (a) the oxygen content of the atmosphere is at least 19.5 percent by volume; and that, (b) toxic materials in the atmosphere are within permissible concentrations; and that, (c) the residues are not capable of producing toxic materials under existing atmospheric conditions while maintained as directed on the Marine Chemist's Certificate.

**NOT SAFE FOR WORKERS.** Means that in the compartment or space so designated, the requirements of Safe for Workers has not been met.

**SAFE FOR HOT WORK:** Means that in the compartment so designated; (a) oxygen content of the atmosphere is at least 19.5 percent by volume, with the exception of inerted spaces or where external hot work is to be performed; and that, (b) the concentration of flammable materials in the atmosphere is below 10 percent of the lower flammable limit; and that, (c) the residues are not capable of producing a higher concentration than permitted by (b) above under existing atmospheric conditions in the presence of fire; and while maintained as directed on the Marine Chemist's Certificate; and further, that, (d) all adjacent spaces have been cleaned sufficiently to prevent the spread of fire, or are satisfactorily inerted, or, in the case of fuel tanks, or lube oil tanks, or engine room or fire room bilges, have been treated in accordance with the Marine Chemist's requirements.

**NOT SAFE FOR HOT WORK.** Means that in the compartment so designated, the requirements of Safe for Hot Work have not been met.

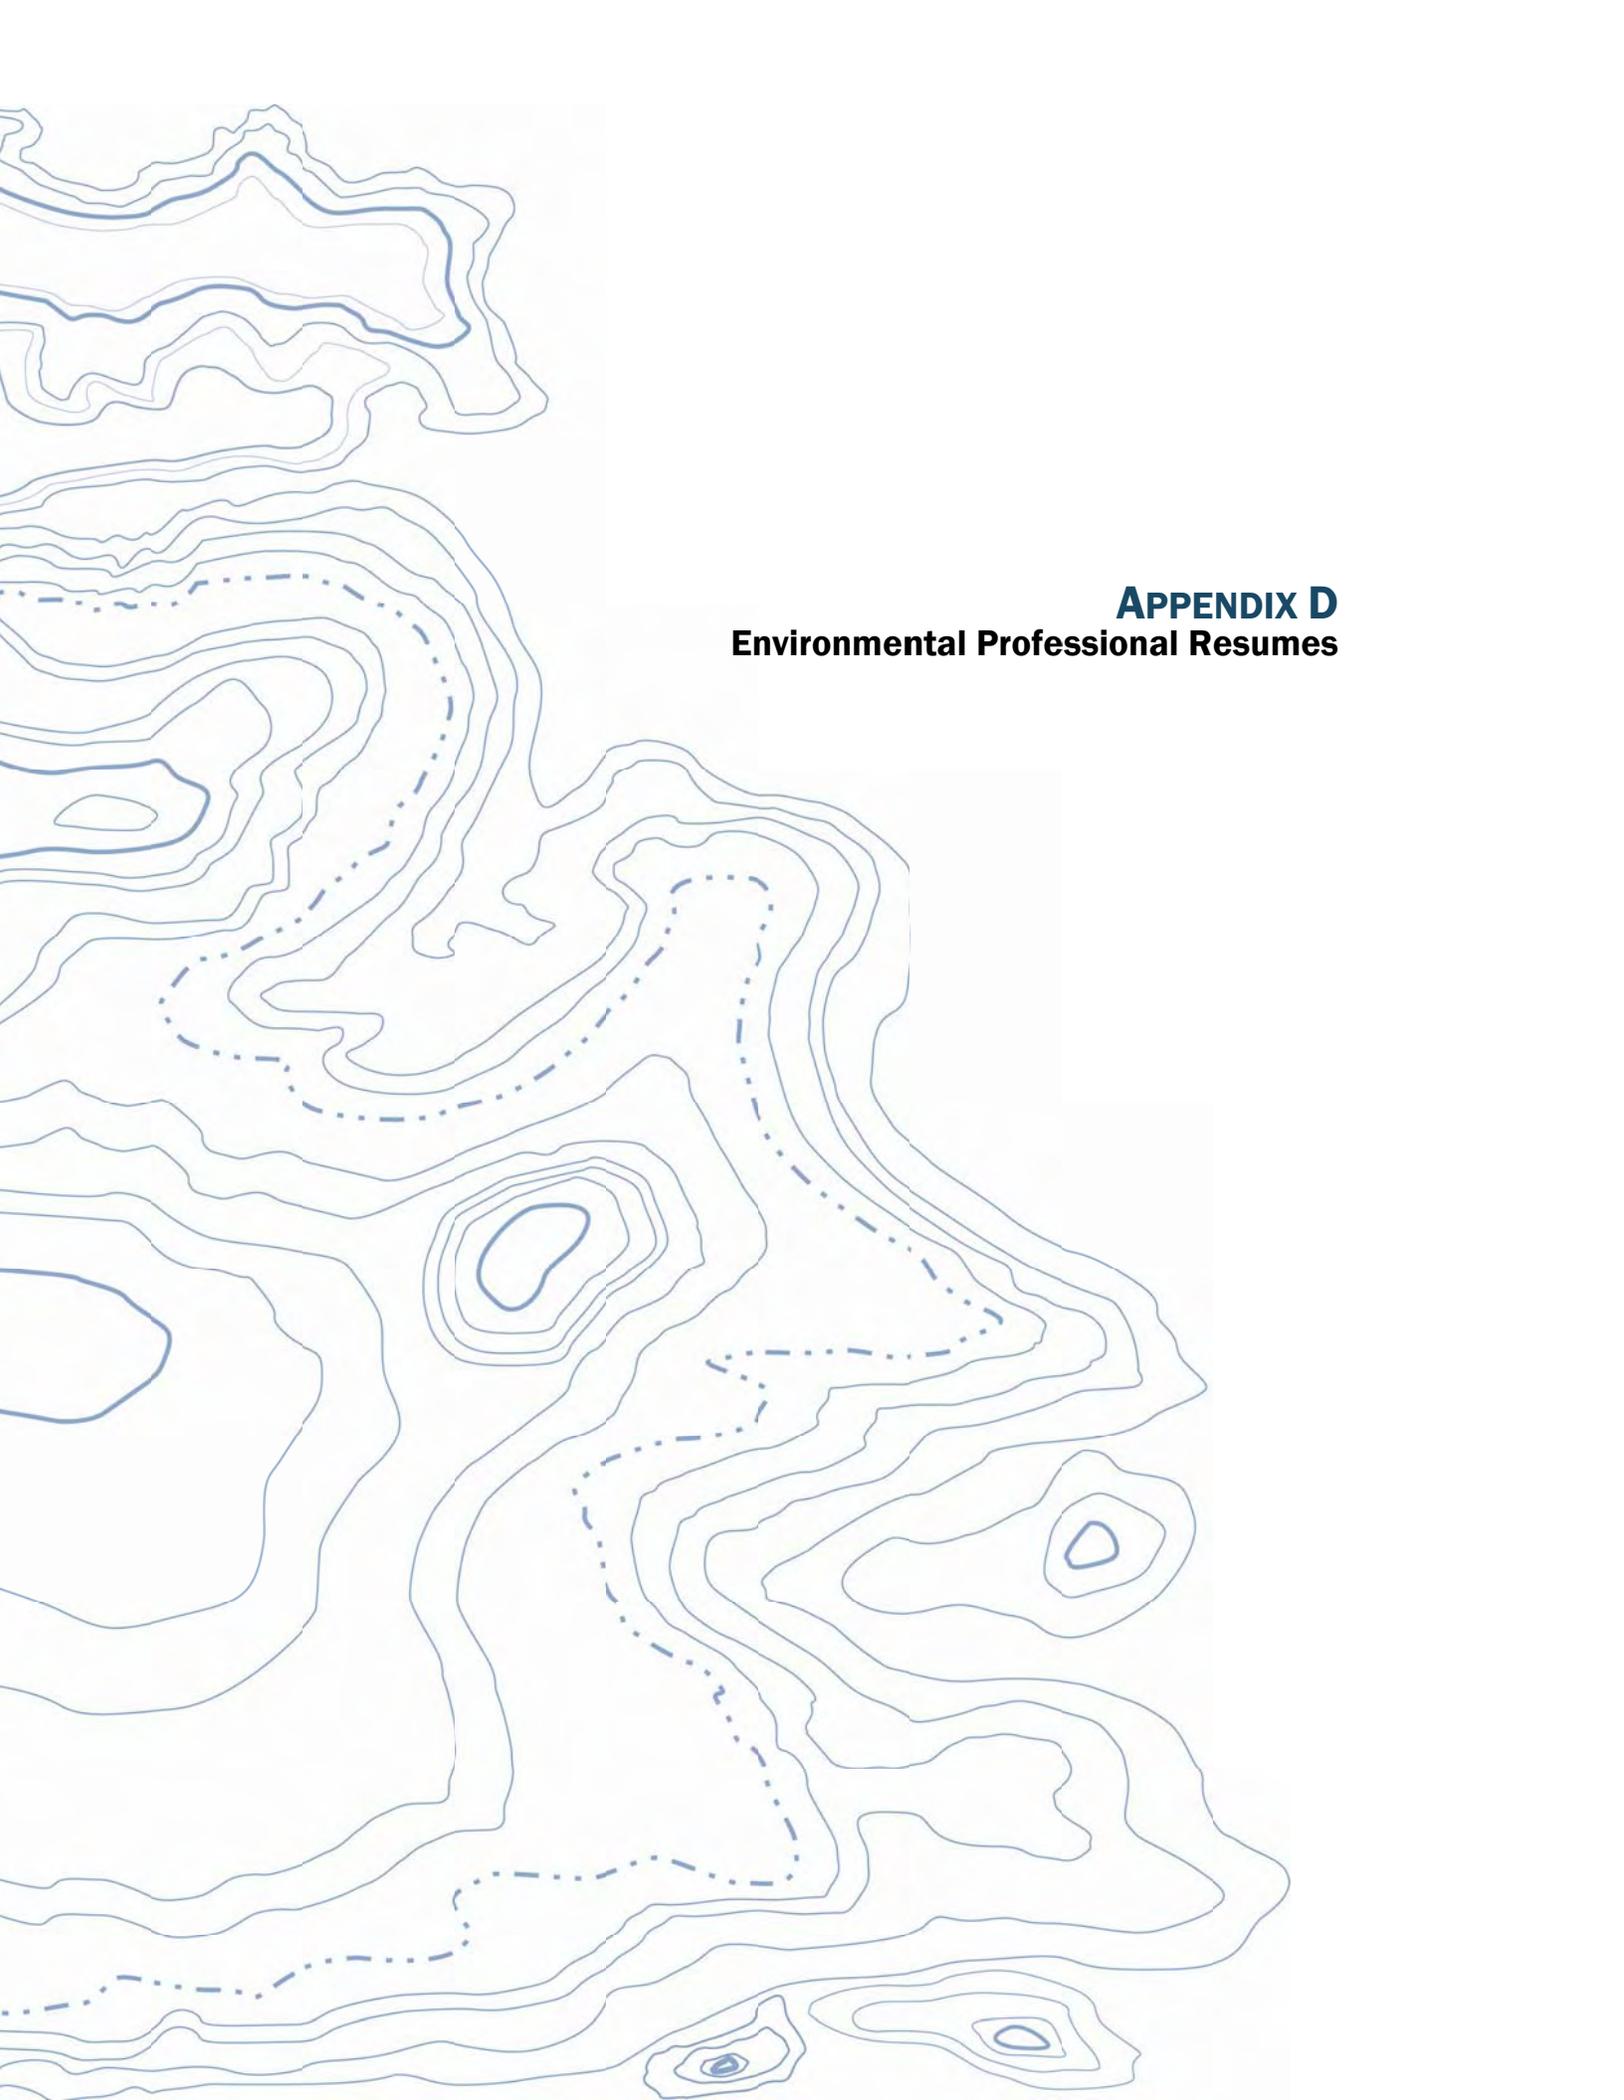

**SAFE FOR REPAIR YARD ENTRY** Means that the compartments and spaces of the flammable cryogenic liquid carrier so designated: (a) have been tested by sampling at remote sampling stations, and results indicate the atmosphere tested to be above 19.5 percent oxygen, and less than 10 percent of the lower flammable limit, or (b) are inerted.

**CHEMIST'S ENDORSEMENT** This is to certify that I have personally determined that all spaces in the foregoing list are in accordance with NFPA 306-1980 Control of Gas Hazards on Vessels and have found the condition of each to be in accordance with its assigned designation.

"The undersigned hereby accepts receipt of this Certificate under Section 2-3 of NFPA 306-1980 and understands conditions and limitations under which it was issued."

This Certificate is based on conditions existing at the time the inspection herein set forth was completed and is issued subject to compliance with all qualifications and instructions.

Signed \_\_\_\_\_ Name \_\_\_\_\_ Date 10/11/99 Signed Don Sly Marine Chemist \_\_\_\_\_ Certificate No. N<sup>o</sup> 598

## DANA CARLISLE, ENVIRONMENTAL MANAGER/PRINCIPAL

### Education

B.A., University of Pennsylvania

M.S.E., University of Washington

Commercial Real Estate Certificate, University of Washington

### Registrations

Washington: Professional Engineer

Environmental Professional (EP) for Phase I ESAs

Dana is an Engineer, an experienced Project Manager and licensed Professional Engineer. In addition to these qualifications, Dana also holds a Certificate in Commercial Real Estate from the UW. Dana has 20 years of environmental engineering consulting experience specializing in environmental due diligence (EDD), site characterization, cleanup action planning, cost estimating, remedial action engineering design, and mitigation. She has worked through the MTCA process achieving dozens of site closure/No Further Action decisions through Ecology's Voluntary Cleanup Program.

Dana's 20 years of experience in Puget Sound provides the foundation by which she understands the issues. Her experience spans the acquisition of an individual parcel, acquisitions of multiple contiguous parcels or multiple non-contiguous parcels. She frequently acts as liaison between facility owners and regulatory agencies while flawlessly managing project budget, schedule and scope; permit application and coordination; project quality; and overall consultant team management. Representative project experience includes:

- City of Bellevue, N.E. 8th Street Widening, Phase I ESA and Linear Corridor ESA
- City of Everett, Phase I ESA, Preferred UW North Site, City of Everett Public Works Cedar Street Complex
- City of Kenmore, Phase I and Phase II ESA, Cleanup Action Plan and No Further Action, Kenmore New City Hall, Former Northshore Utility District Maintenance Headquarters
- City of Redmond, Environmental Cleanup, Leary Way Shops
- City of Redmond, Phase II ESA and Haz-Mat Soil Handling Specifications, Leary Way Water Quality Facility
- City of Redmond, Wellhead Protection Program Monitoring/Groundwater Monitoring Network Enhancement
- City of Redmond, Fire Station 17, Phase I ESA
- King County Housing Authority, Phase I and Phase II ESAs for Hope VI Redevelopment Projects at Park Lake Homes Site II, Seattle
- Seattle Housing Authority, Phase I and Phase II ESAs for Acquisition Property at High Point Redevelopment, Seattle

This appendix provides information to help you manage your risks with respect to the use of this report.

### **Read These Provisions Closely**

Some clients, design professionals and contractors may not recognize that the geoscience practices (geotechnical engineering, geology and environmental science) are far less exact than other engineering and natural science disciplines. This lack of understanding can create unrealistic expectations that could lead to disappointments, claims and disputes. GeoEngineers includes these explanatory “limitations” provisions in our reports to help reduce such risks. Please confer with GeoEngineers if you are unclear how these “Report Limitations and Guidelines for Use” apply to your project or site.

### **Environmental Services Are Performed for Specific Purposes, Persons and Projects**

GeoEngineers has performed this ESA of the two parcels owned by Jimmy Barrier located at 11866 NE 8<sup>th</sup> Street and 12000 NE Bellevue-Redmond Road in Bellevue, Washington in general accordance with the scope and limitations of Contract Amendment No. 2 to Agreement No. PW-R164, ASTM E 1527-05, Standard Practice for Phase I ESAs, and EPA’s Federal Standard 40 CFR Part 312 “Standards and Practices for All Appropriate Inquiries (AAI).” This report has been prepared for the exclusive use of the City of Bellevue and PB, their agents and project design team. This report is not intended for use by others, and the information contained herein is not applicable to other properties.

GeoEngineers structures our services to meet the specific needs of our clients. For example, an environmental site assessment study conducted for a property owner may not fulfill the needs of a prospective purchaser of the same property. Because each environmental study is unique, each environmental report is unique, prepared solely for the specific client and project property. This report should not be applied for any purpose or project except the one originally contemplated.

### **This Environmental Report Is Based on a Unique Set of Project-Specific Factors**

This report has been prepared for the two parcels owned by Jimmy Barrier located at 11866 NE 8<sup>th</sup> Street and 12000 NE Bellevue-Redmond Road in Bellevue, Washington. GeoEngineers considered a number of unique, project-specific factors when establishing the scope of services for this project and report. Unless GeoEngineers specifically indicates otherwise, do not rely on this report if it was:

- not prepared for you,
- not prepared for your project,
- not prepared for the specific property explored, or
- completed before important project changes were made.

If important changes are made to the project or subject property after the date of this report, GeoEngineers should be retained to review our interpretations and recommendations and to provide written modifications or confirmation, as appropriate.

### **Reliance Conditions for Third Parties**

Our report was prepared for the exclusive use of City of Bellevue and PB. No other party may rely on the product of our services unless we agree in advance to such reliance in writing. This is to provide our firm with reasonable protection against open-ended liability claims by third parties with whom there would otherwise be no contractual limits to their actions. Within the limitations of scope, schedule and budget, our services have been executed in accordance with our Agreement with the Client and generally accepted environmental practices in this area at the time this report was prepared.

### **Historical Information Provided by Others**

GeoEngineers makes no warranties or guarantees regarding the accuracy or completeness of information provided or compiled by others. The information presented in this report is based on the above-described research and a single recent site visit. GeoEngineers has relied upon information provided by others in our description of historical conditions and in our review of regulatory databases and files. The available data do not provide definitive information with regard to all past uses, operations or incidents at the subject property or adjacent properties.

### **Uncertainty Remains Even After This ESA Study Is Completed**

No ESA can wholly eliminate uncertainty regarding the potential for recognized environmental conditions (RECs) in connection with a property. Performance of an ESA study is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a property. There is always a potential that areas with contamination that were not identified during this Phase I ESA exist at the subject property or in the study area. Further evaluation of such potential would require additional research, subsurface exploration, sampling and/or testing.

### **Environmental Regulations Are Always Evolving**

Some substances may be present in the vicinity of the subject property in quantities or under conditions that may have led, or may lead, to contamination of the subject property, but are not included in current local, state or federal regulatory definitions of hazardous substances or do not otherwise present current potential liability. GeoEngineers cannot be responsible if the standards for appropriate inquiry, or regulatory definitions of hazardous substance, change or if more stringent environmental standards are developed in the future.

### **Property Conditions Can Change**

This environmental report is based on conditions that existed at the time the study was performed. The findings and conclusions of this report may be affected by the passage of time (for example, a Phase I ESA report is typically applicable for 180 days), by events such as a change in property use or occupancy, or by natural events, such as floods, earthquakes, slope instability or groundwater fluctuations. If more than six months have passed since issuance of our report or work product, or if any of the described events may have occurred, please contact GeoEngineers before applying

this report so that we may evaluate whether changed conditions affect the continued reliability or applicability of our conclusions and recommendations.

### **Geotechnical, Geologic and Environmental Reports Should Not Be Interchanged**

The equipment, techniques and personnel used to perform an environmental study differ significantly from those used to perform a geotechnical or geologic study and vice versa. For that reason, a geotechnical engineering or geologic report does not usually relate any environmental findings, conclusions or recommendations; e.g., about the likelihood of encountering underground storage tanks or regulated contaminants. Similarly, environmental reports are not used to address geotechnical or geologic concerns regarding a specific project.

### **Biological Pollutants**

GeoEngineers' Scope of Work specifically excludes the investigation, detection, prevention or assessment of the presence of Biological Pollutants. Accordingly, this report does not include any interpretations, recommendations, findings, or conclusions regarding the detecting, assessing, preventing or abating of Biological Pollutants and no conclusions or inferences should be drawn regarding Biological Pollutants, as they may relate to this project. The term "Biological Pollutants" includes, but is not limited to, molds, fungi, spores, bacteria, and viruses, and/or any of their byproducts.

If Client desires these specialized services, they should be obtained from a consultant who offers services in this specialized field.
