RE: Downtown Bellevue Traffic Modeling Attachments

Attached to this memo, as part of the City of Bellevue's comments on the Sound Transit East Link Supplemental Draft Environmental Impact Statement, please find the following:

### **BKR Documentation Report**

The Bellevue/Kirkland/Redmond (BKR) Documentation report was prepared for the Sound Transit Light Rail Peer Review Panel to document the components and assumptions for the 2008 "base year" traffic model and the 2030 forecast year model results. This traffic demand modeling was the basis for the development of the micro-simulation traffic analysis of the East Link light rail alternatives for Downtown Bellevue.

### **VISSIM Documentation Report**

The VISSIM micro-simulation traffic analysis was conducted jointly by the City of Bellevue and Sound Transit and its consultants, whose work and results are contained in this report. This analysis provided information used to compare light rail alternatives in Downtown Bellevue, specifically measuring effects on the downtown transportation system. Multiple iterations of the VISSIM model were run until each agency was reasonably satisfied of its accuracy in predicting 2030 traffic impacts.

The results of this work were documented in this report and summarized in the *Downtown Bellevue Light Rail Alternatives Concept Design Report* released jointly by Sound Transit and the City of Bellevue in February 2010. The version of the VISSIM results used in the Concept Design Report was referred to by Bellevue staff as Version 1.0. Subsequently, Bellevue staff refined the VISSIM traffic analysis (Versions 1.1 and 1.2) based on staff's desire to attain a higher confidence level in the results and address specific questions about the work from City Council members and other community stakeholders. The refined VISSIM results (V 1.2) were presented to the Sound Transit Peer Review Panel and Sound Transit staff on February 22, 2010 and to the Bellevue City Council on March 15, 2010. It should be noted that some of the work that was presented to City Council in March, such as the detailed travel time route comparisons, were a direct result of recommendations made by the Peer Review Panel.

### **VISSIM Analysis of intersection delay, level of service and travel time**

This spreadsheet is Version 1.2 of the VISSIM micro-simulation traffic analysis, built upon the joint Bellevue/Sound Transit effort, and developed by the City of Bellevue for traffic analysis of the light rail alternatives for Downtown Bellevue. As noted in the spreadsheet, the findings

from Version 1.2 show a greater difference overall (both for the Downtown area as a whole and the smaller southeast subarea of Downtown where surface light rail alternatives were being considered) between the C9T/C14E alternatives and the C9A and C11A alternatives in terms of average vehicle delay at intersections.

### **Bellevue City Council Presentation March 15, 2020**

This attachment is a copy of a staff presentation to the Bellevue City Council of the VISSIM Version 1.2 traffic modeling analysis of the light rail alternatives for Downtown Bellevue. This more detailed analysis was done based on questions raised by the City Council about specific intersection results, which were not reported in the *Downtown Bellevue Light Rail Alternatives Concept Design Report*. This analysis includes travel delay data for specific intersections that are shown to operate at Level of Service E or F in 2030 and the amount of vehicle delay at these intersections. Charts in the presentation also show the differences in delay at specific intersections between the C9T/C14E alternatives and the C9A and C11A alternatives, which is quite significant in certain places.

# East Link: Downtown Bellevue Alignments

Bellevue City Council

March 15, 2010

# Tonight's Agenda

- Council's 2/2009 downtown alignment preference
- Development and evaluation of new alternatives
- C9T performance
- C9T funding strategy
- Next Steps

# Downtown Bellevue City Council Preference (2/09)

## Policy and plan consistency:

- “Light rail is critical to reinforcing Bellevue’s development as a metropolitan center...”
- “...tunnel through downtown Bellevue best meets the needs of the city and region”
- “Build it right the first time”
- Hospital station serves Wilburton redevelopment

## High Performance:

- Downtown, hospital district, and Wilburton well served
- High ridership

## Low Permanent Impact:

- Minimal street and environmental impacts

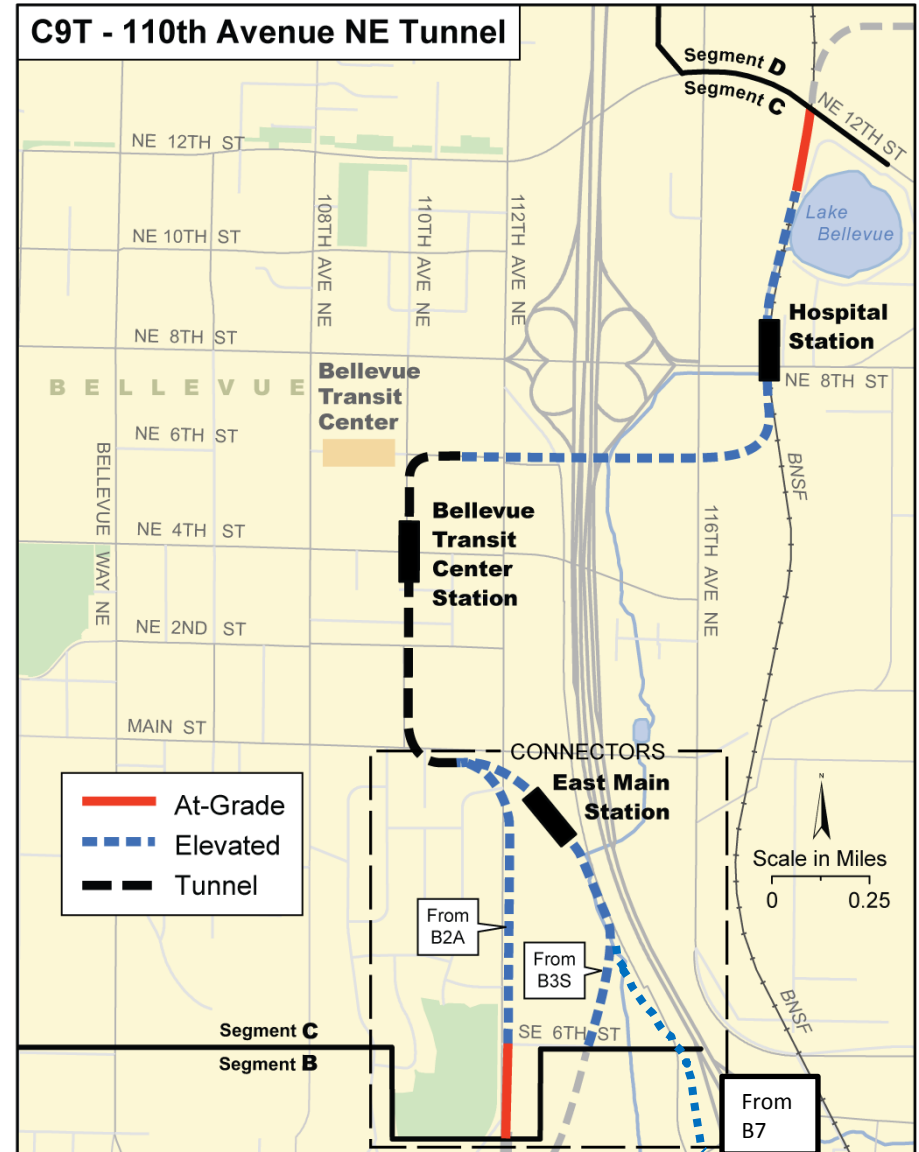

“...best combination of performance and community value, making it the best investment for the next 100 years based on a regional, as well as local, evaluation process.”

# Alignment Alternatives Development

- Peer Review and Value Analysis result in three new alternatives
- Bellevue City Council requested study of C14E
- Public workshop and stakeholder briefings in November and December 2009
- Sound Transit with Bellevue staff developed new alternatives to conceptual engineering level of design

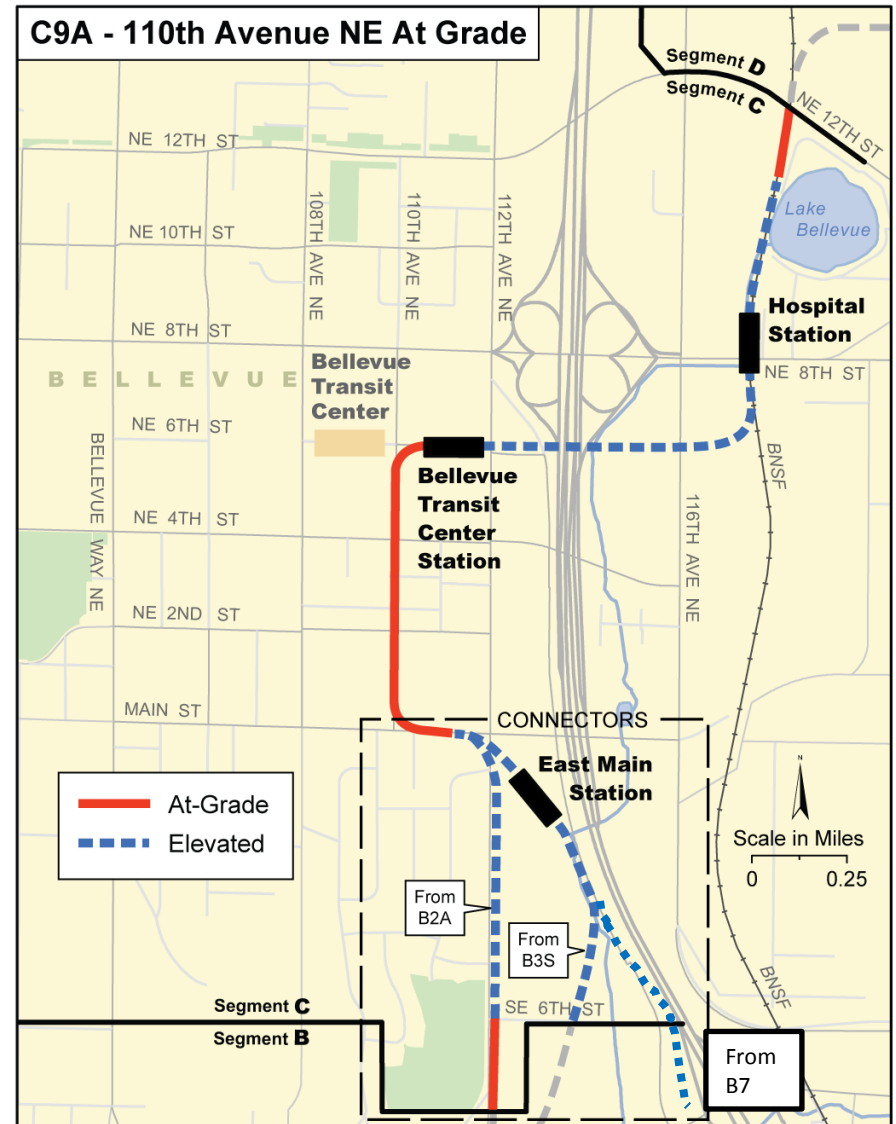

# C9T: 110th NE Tunnel

- Tunnel under 110th
- Three stations:
  - East Main: elevated
  - BTC: underground
  - Hospital: elevated

## C9A: 110th NE At-Grade

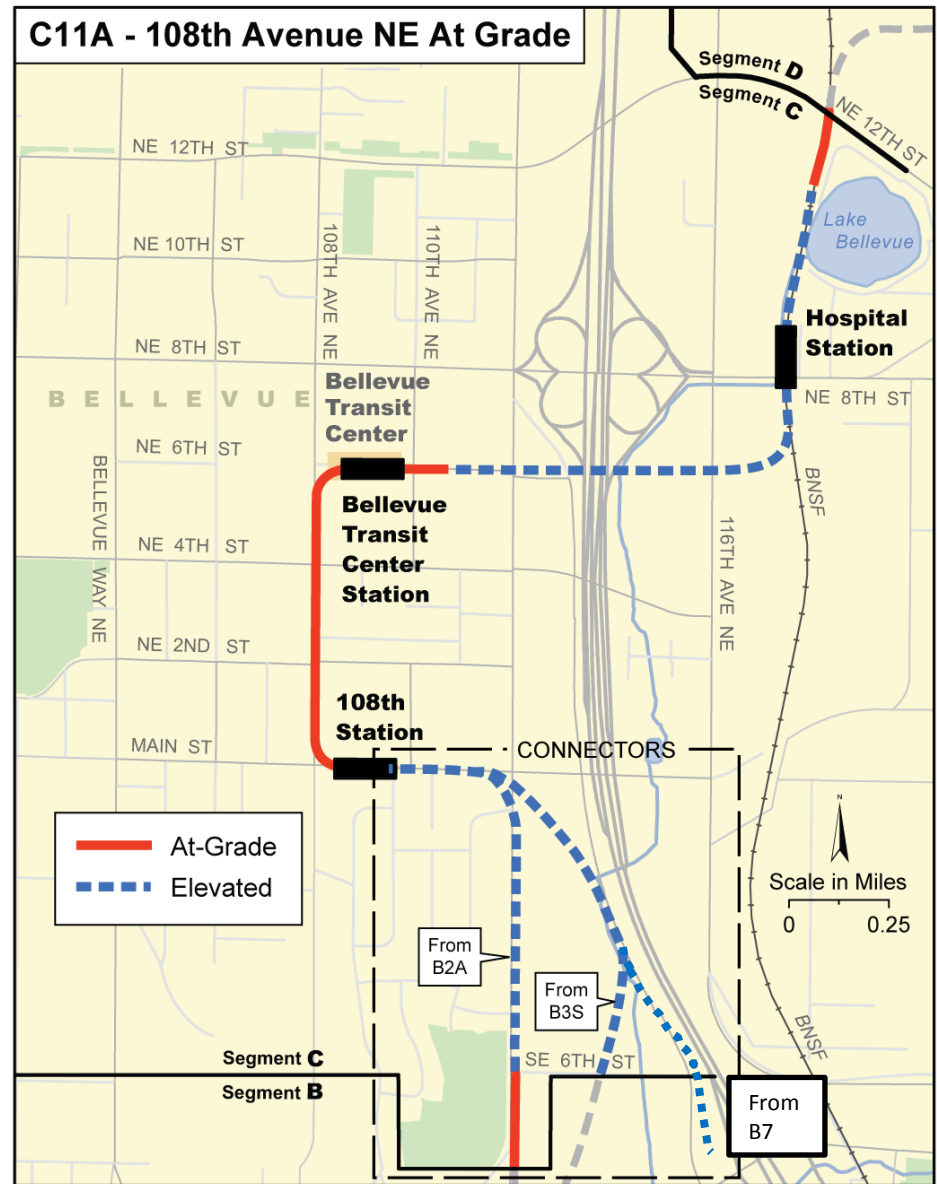

- At-grade, center running on 110th
- Three stations:
  - East Main: Elevated
  - BTC: Elevated
  - Hospital: Elevated

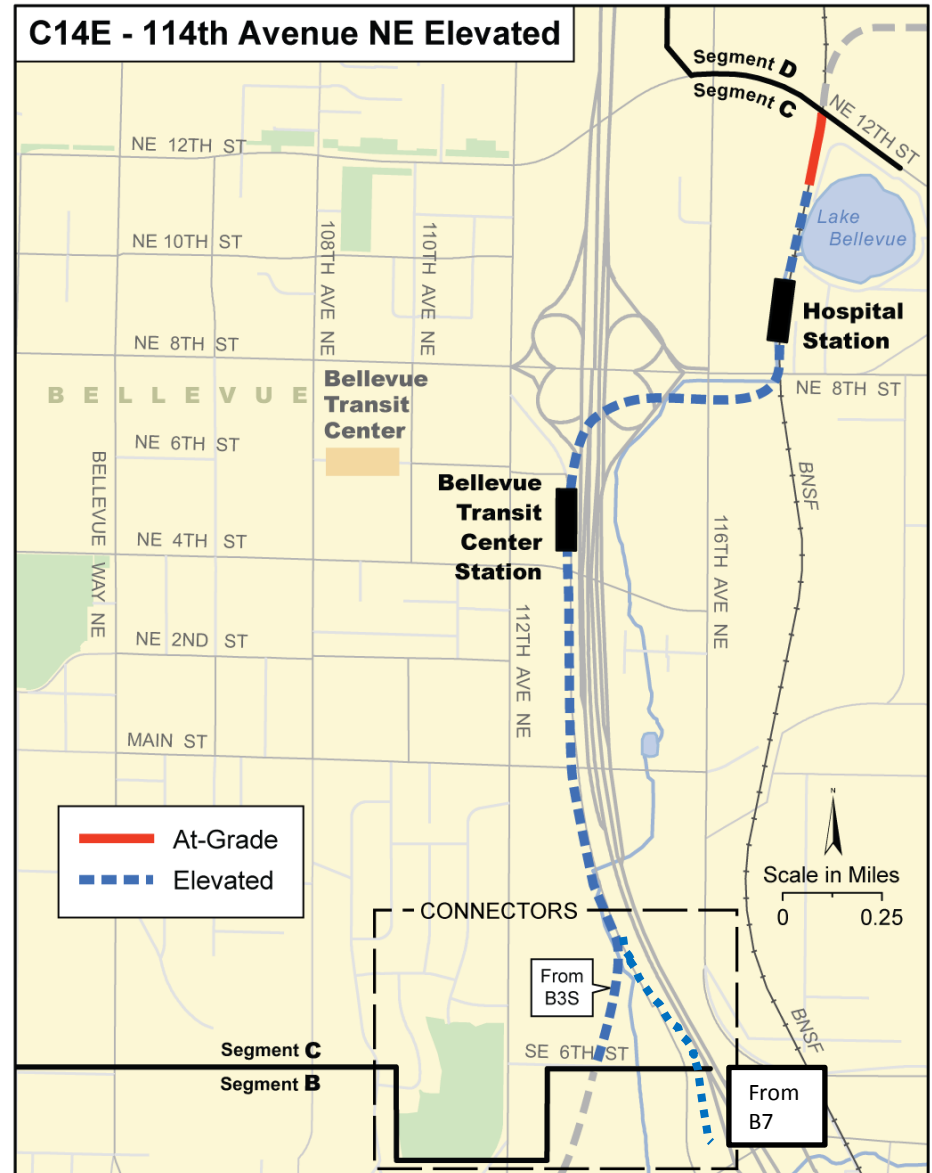

# C11A: 108th NE At-Grade

- At-grade running on 108th
- Three stations:
  - 108th: At-grade
  - BTC: At-grade
  - Hospital: Elevated

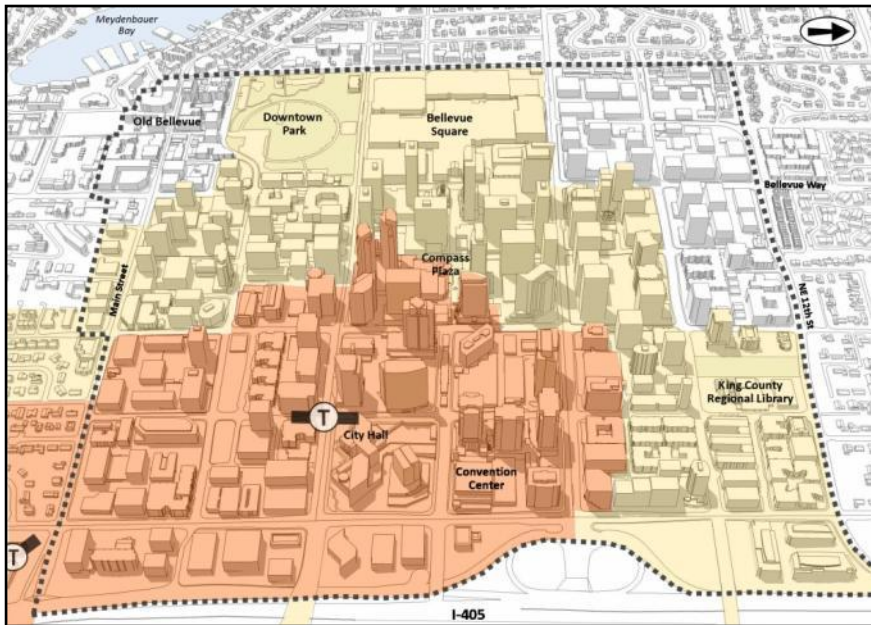

# C14E: 114th Avenue NE Elevated

- Elevated on 114th
- Two stations:
  - BTC: Elevated
  - Hospital: Elevated
- Other elements:
  - Moving sidewalk
  - Pedestrian bridge to Meydenbauer Center
- Possible additions:
  - 200-space park-and-ride
  - Circulator bus

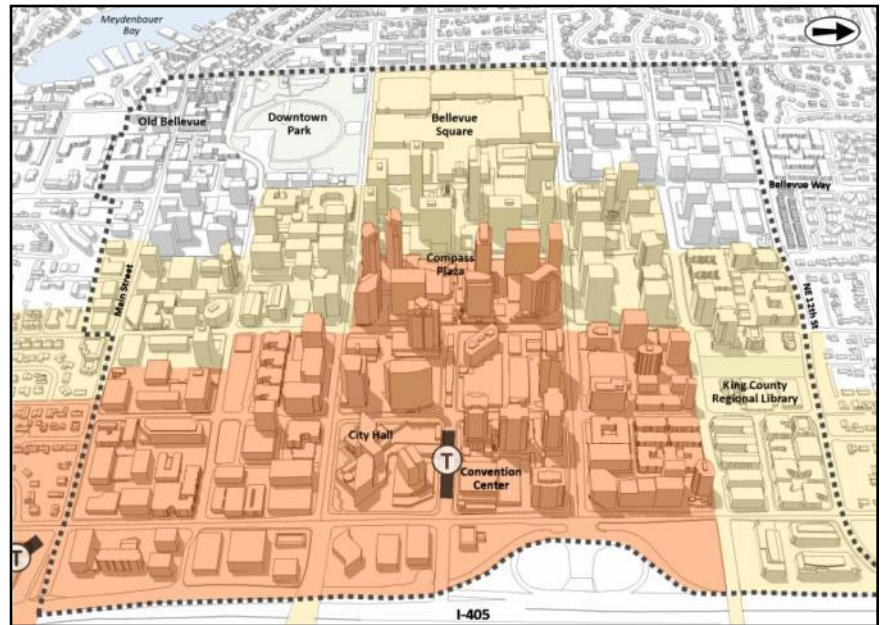

# Downtown: 2030 Depiction of Where Growth Might Occur

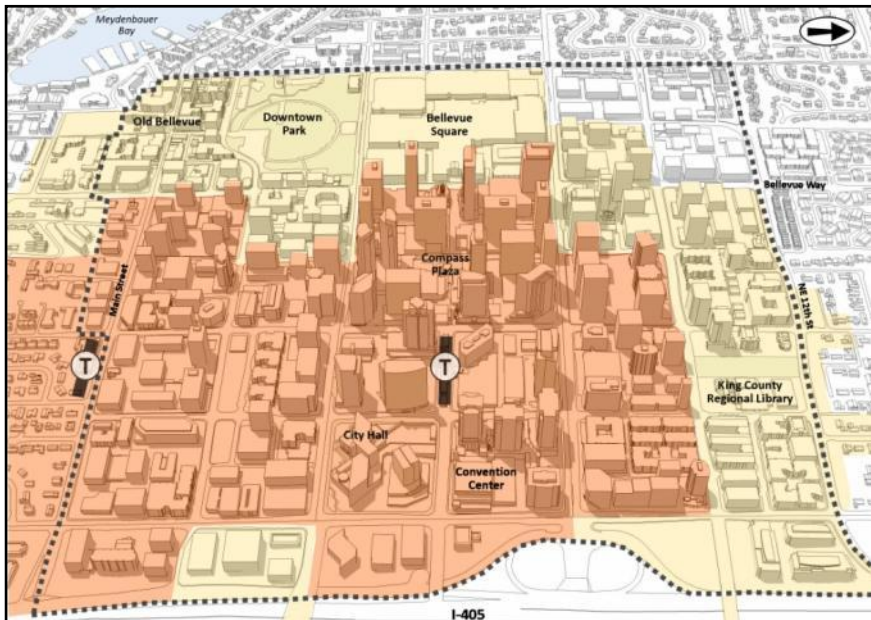

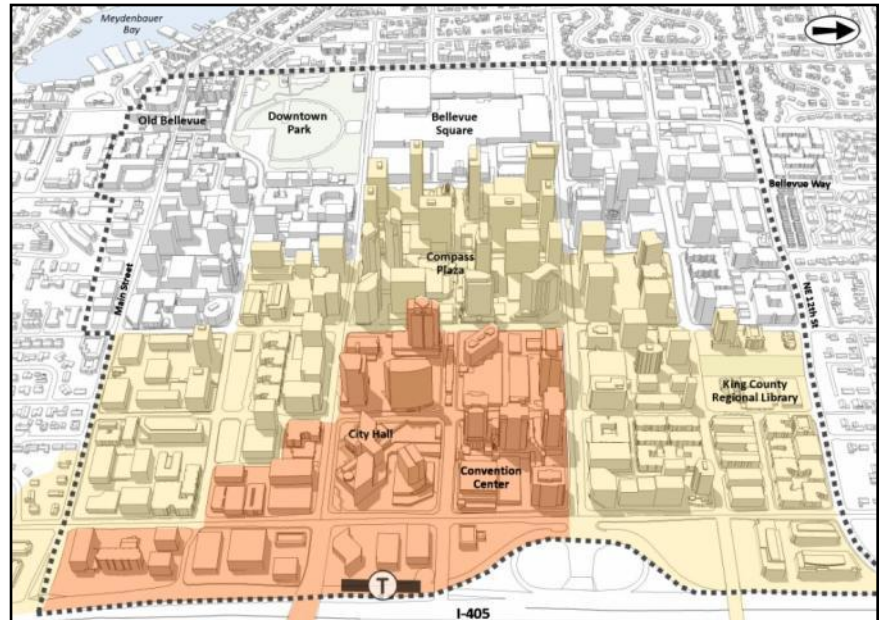

**C9T: 5 and 10-minute Walk**

**C9A: 5 and 10-minute Walk**

**C11A: 5 and 10-minute Walk**

**C14E: 5 and 10-minute Walk**

# Walk Distance to Stations

	2030 Downtown Jobs		2030 Downtown Residents	
Downtown Subarea Forecast	79,000		19,000	
<b>Walk Distance</b>	5-min. walk	10-min. walk	5-min. walk	10-min. walk
<b>C9A Alignment: 110<sup>th</sup> NE At-Grade</b>				
Downtown Land Use within Walk Distance Percent of 2030 Downtown Subarea Total	39,938 51%	75,298 96%	5,221 28%	11,826 63%
<b>C9T Alignment: 110<sup>th</sup> NE Tunnel</b>				
Downtown Land Use within Walk Distance Percent of 2030 Downtown Subarea Total	34,755 44%	75,908 97%	3,940 21%	12,345 66%
<b>C11A Alignment: 108<sup>th</sup> NE At-Grade</b>				
Downtown Land Use within Walk Distance Percent of 2030 Downtown Subarea Total	60,059 76%	77,824 99%	9,929 53%	17,157 92%
<b>C14E Alignment: 114<sup>th</sup> NE Elevated</b>				
Downtown Land Use within Walk Distance Percent of 2030 Downtown Subarea Total	21,249 27%	62,023 79%	1,258 7%	8,628 46%

# Evaluation Summary: Ridership and Travel Time

Criteria	C9T 110 <sup>th</sup> Tunnel	C9A 110 <sup>th</sup> At-Grade	C11A 108 <sup>th</sup> At-Grade	C14E 114 <sup>th</sup> Elevated
Segment C daily boardings	8,000	7,500	8,000	6,000
East Link daily ridership	51,000	48,500	49,000	48,500*
Segment C light rail travel time (minutes)	6	9	9	4

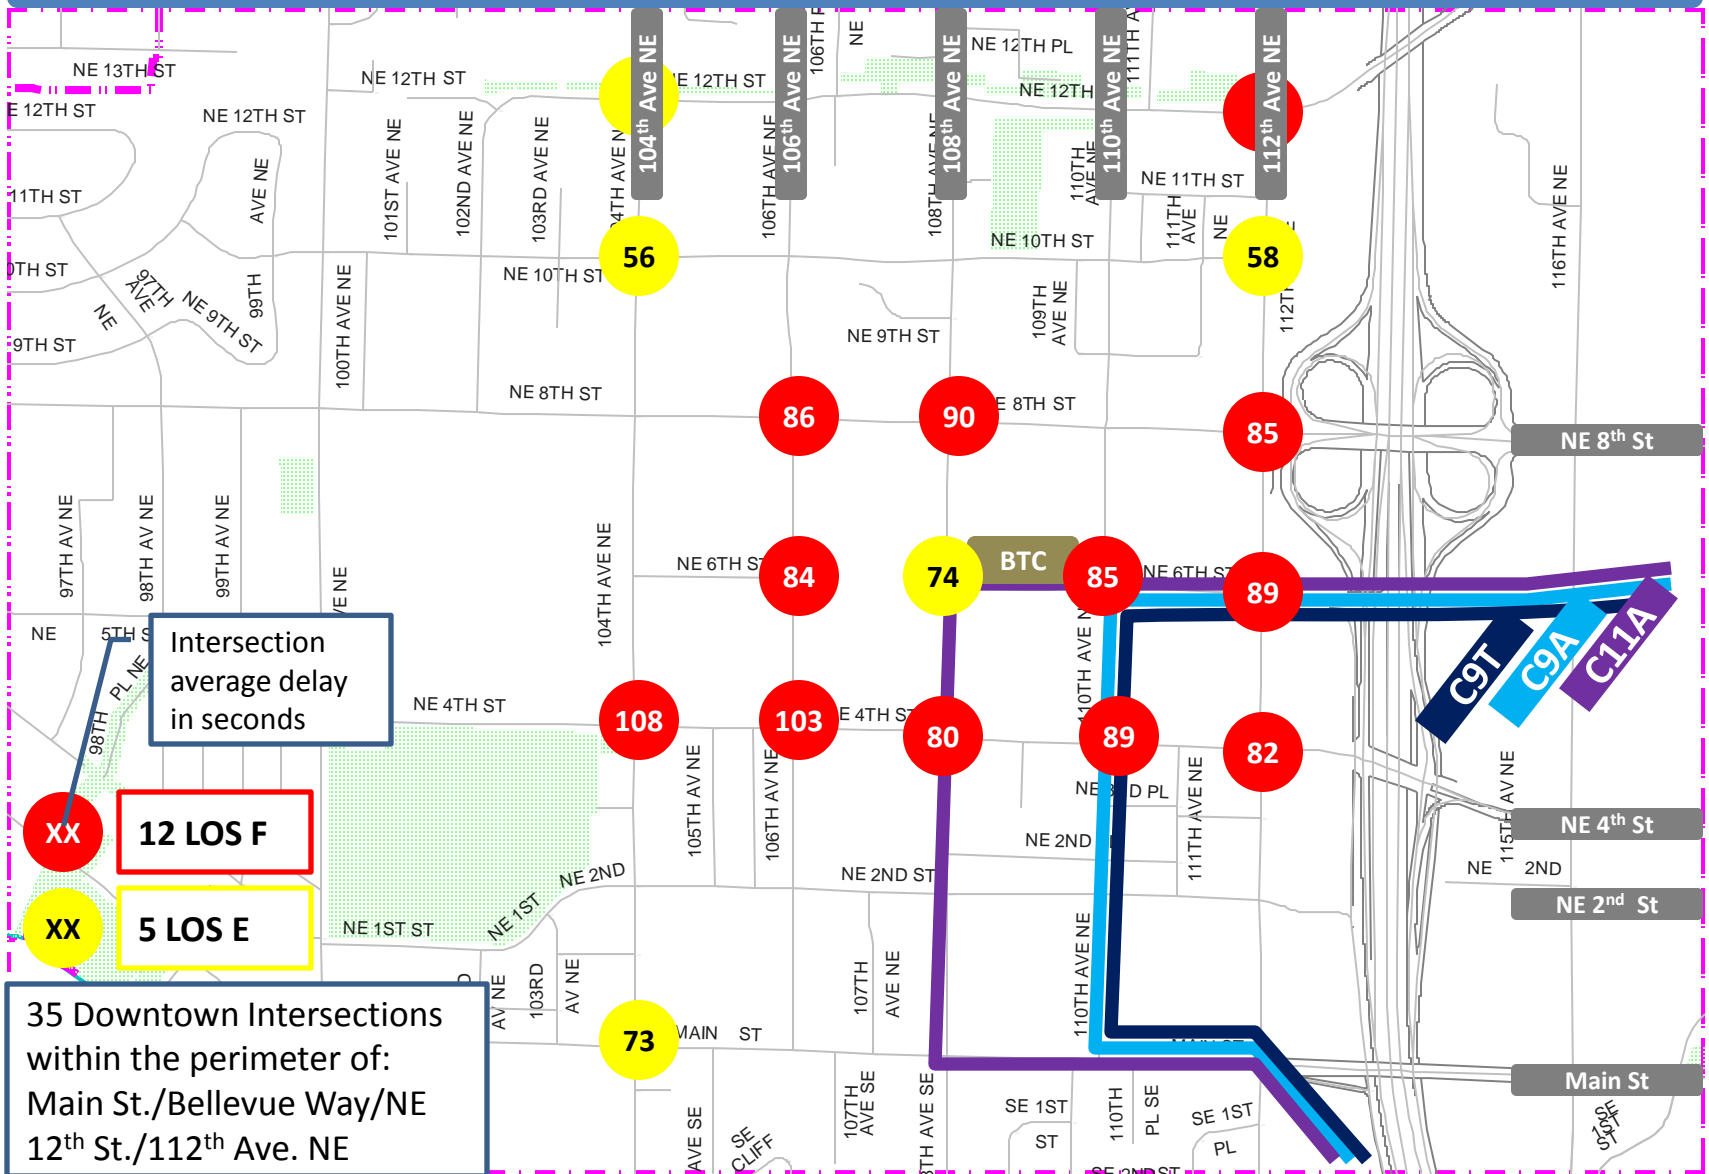

\* Inclusion of a 200 space park-and-ride garage and circulator bus but does not significantly increase segment ridership.

# Evaluation Summary: Traffic Operations (Updated)

Criteria	C9T 110 <sup>th</sup> Tunnel	C9A 110 <sup>th</sup> At-Grade	C11A 108 <sup>th</sup> At-Grade	C14E 114 <sup>th</sup> Elevated
Southbound vehicle travel time (minutes)	7.1	8.0	8.0	7.1
Northbound vehicle travel time (minutes)	5.3	5.6	5.7	5.3
Eastbound vehicle travel time (minutes)	4.7	4.6	5.6	4.7
Westbound vehicle travel time (minutes)	4.4	5.2	5.1	4.4
Percent of vehicle demand into and out of downtown served	82%	80%	80%	82%
Average downtown intersection vehicle delay (seconds)	<b>61</b>	<b>71</b>	<b>68</b>	<b>61</b>
Average vehicle delay at key affected intersections (seconds)	<b>68</b>	<b>82</b>	<b>82</b>	<b>68</b>

# Intersection LOS E and F in LRT Alternatives C9T and C14E

V1.2

Intersection average delay in seconds

12 LOS F

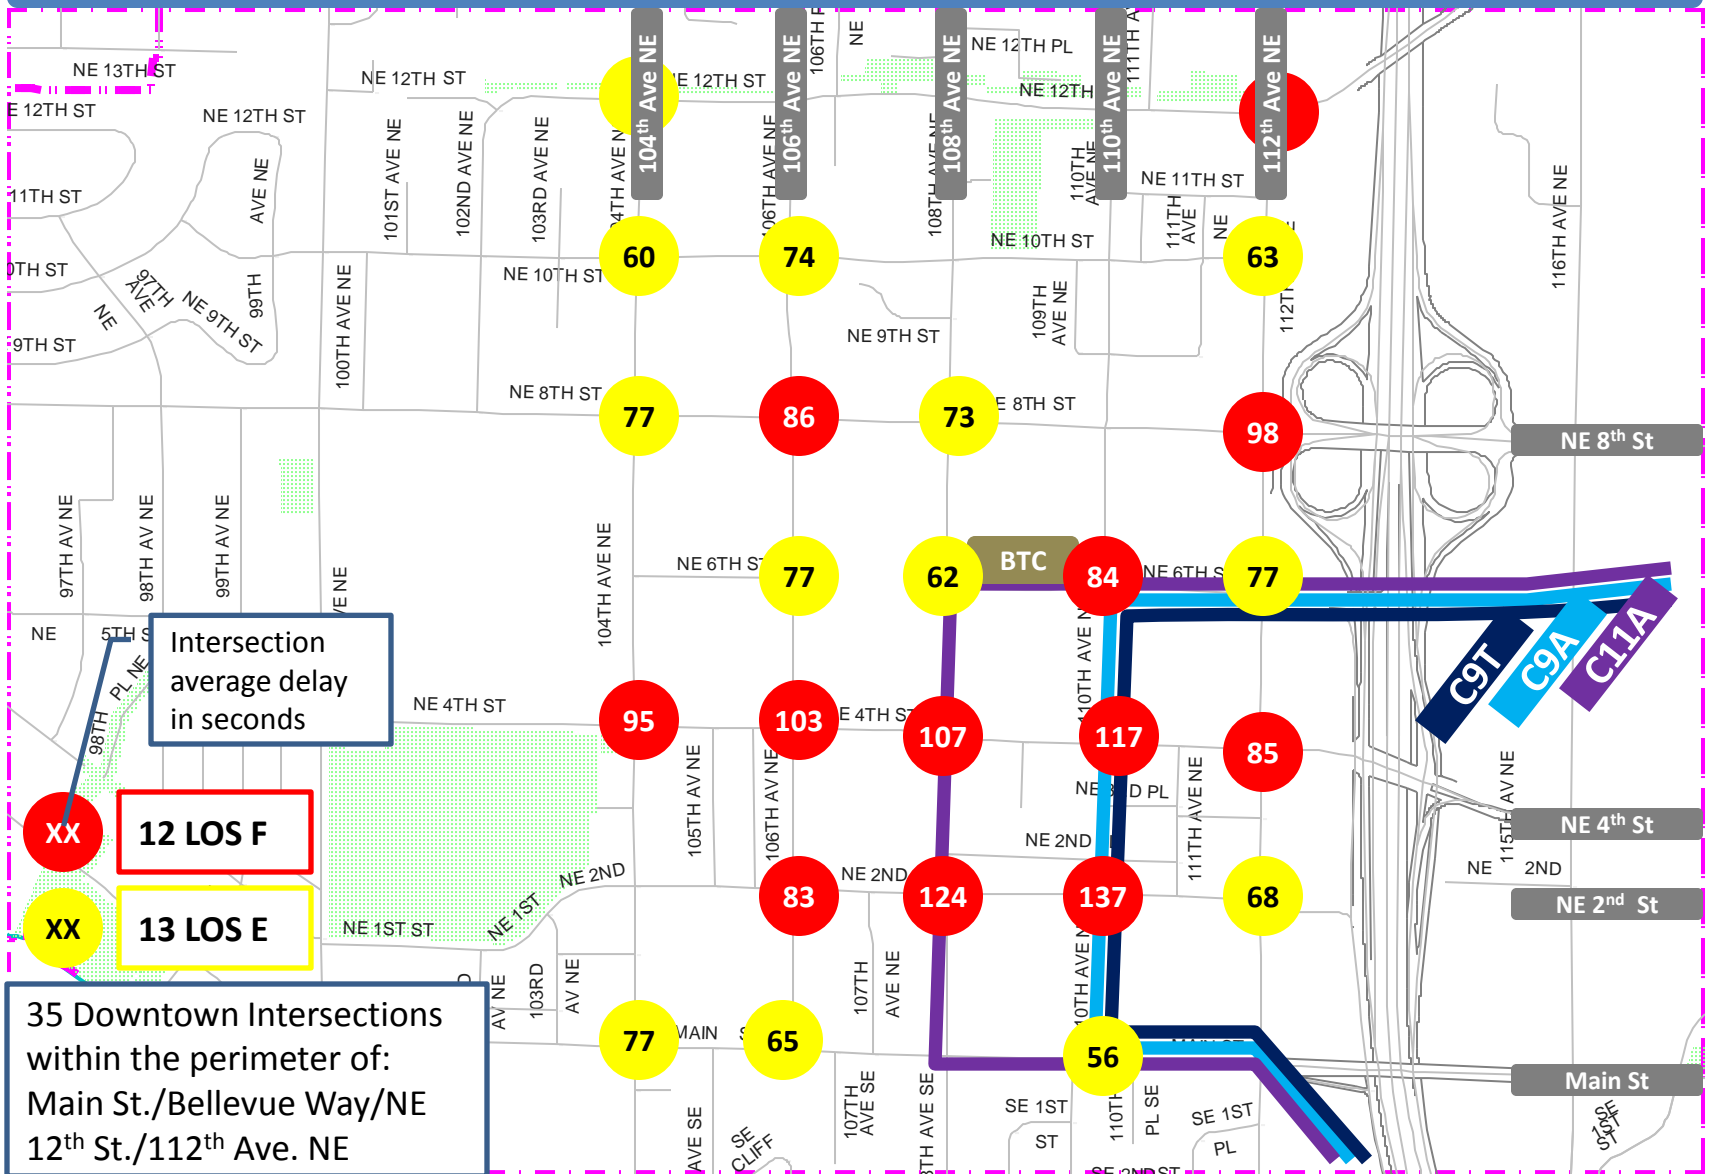

5 LOS E

35 Downtown Intersections within the perimeter of:  
Main St./Bellevue Way/NE 12th St./112th Ave. NE

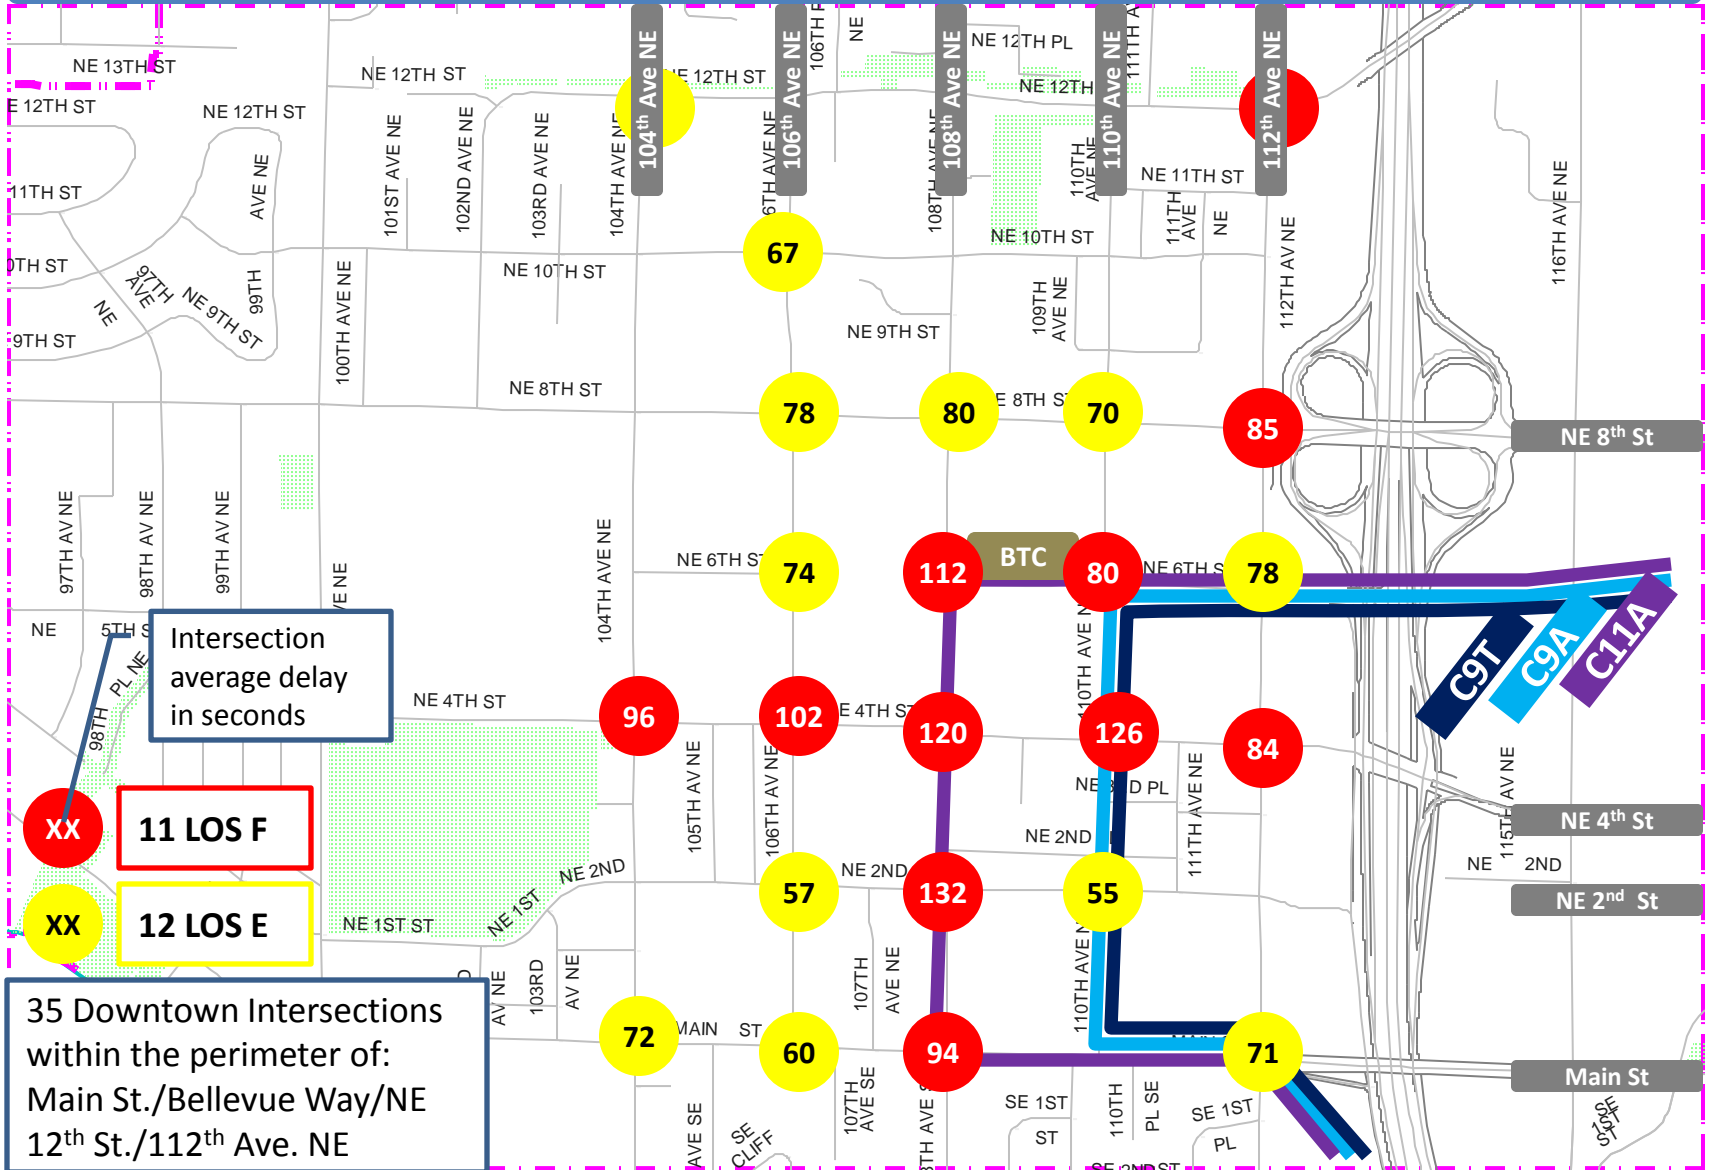

# Intersection LOS E and F in LRT Alternative C9A

V1.2

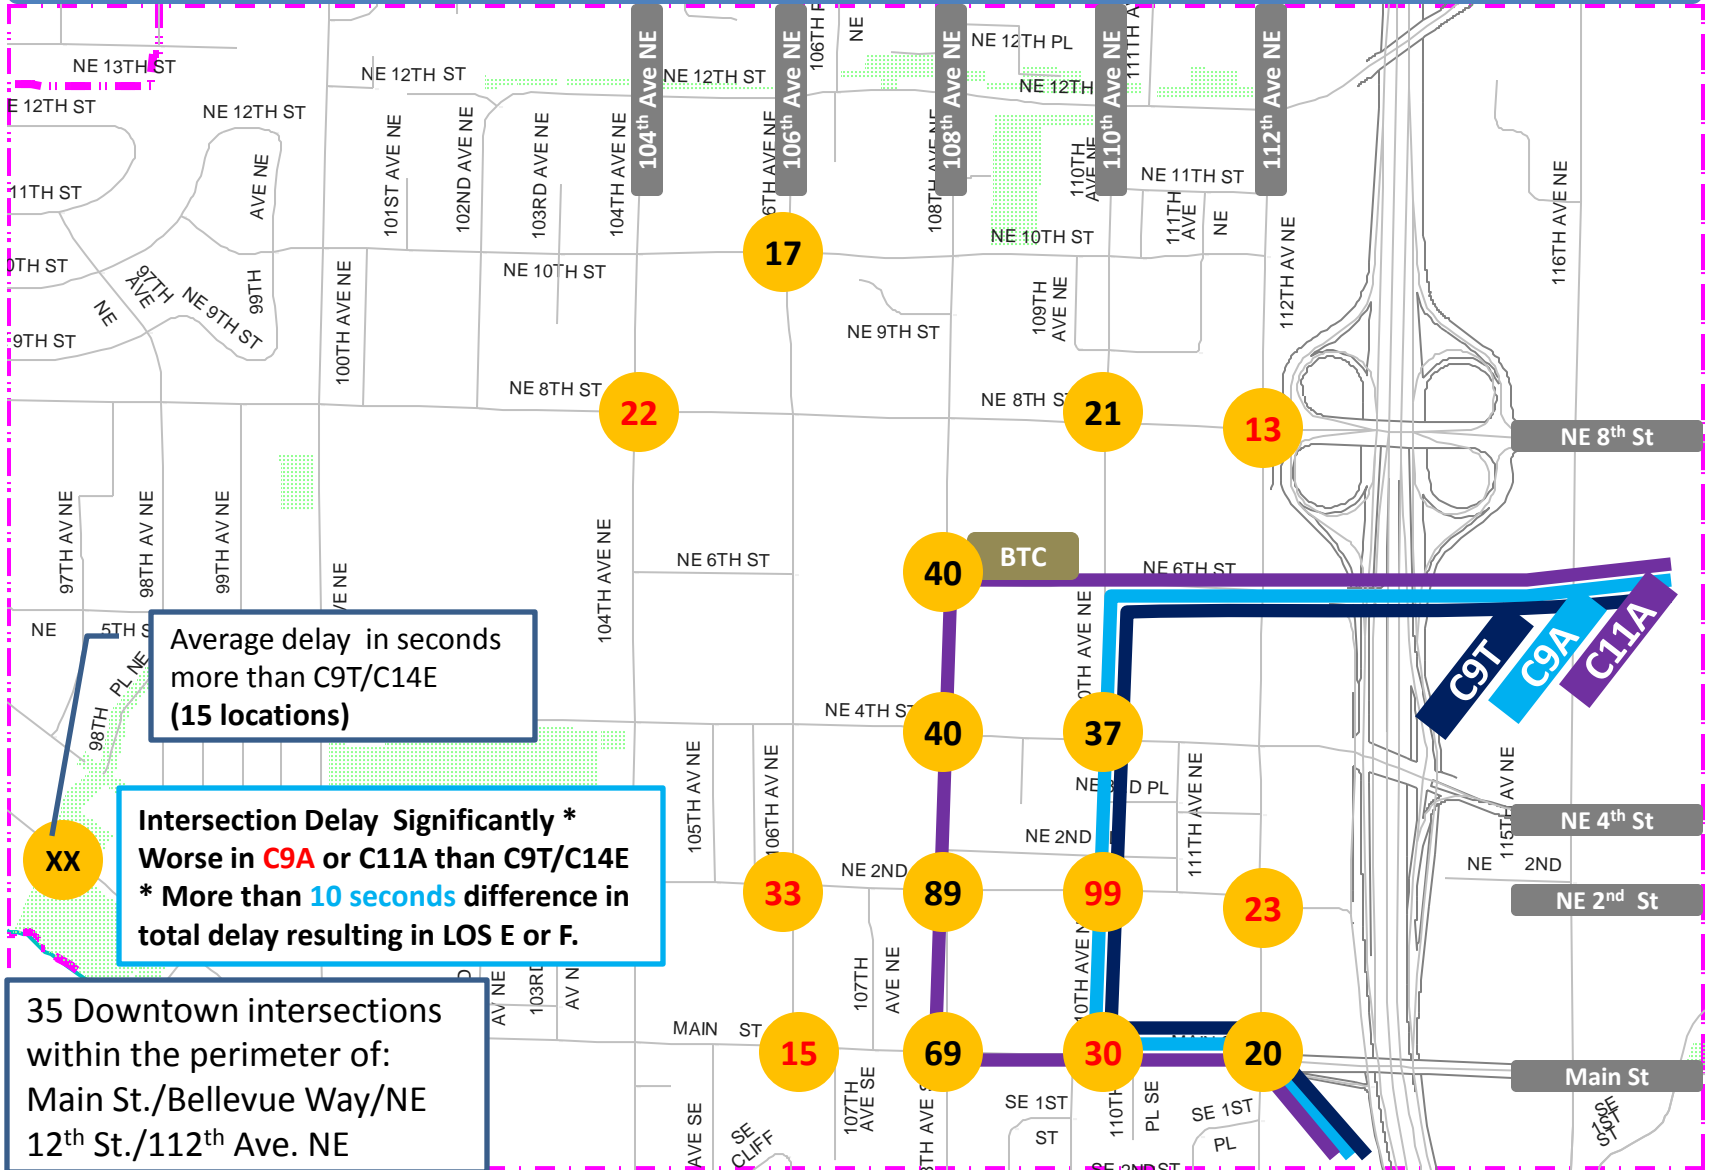

# Intersection LOS E and F in LRT Alternative C11A

V1.2

# Intersection Delay Significantly \* Worse in C9A or C11A than in C9T/C14E

V1.2

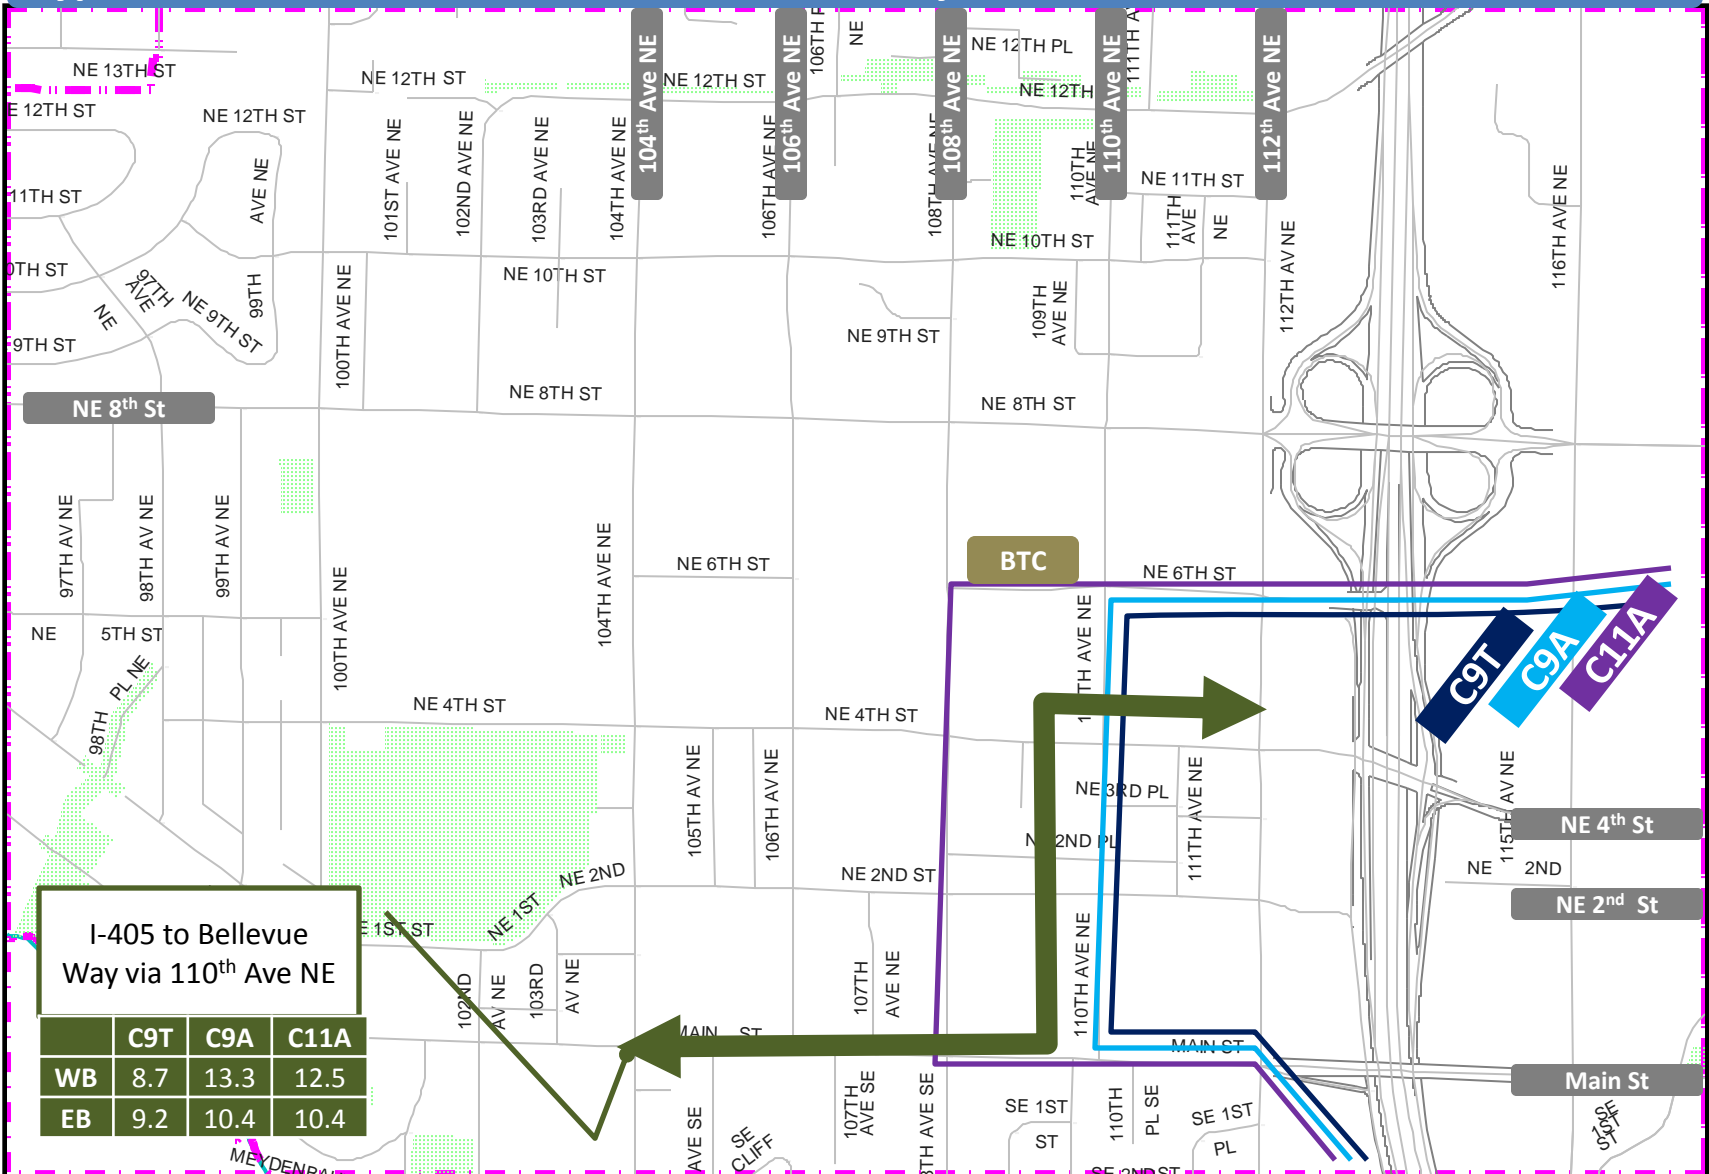

Average delay in seconds more than C9T/C14E (15 locations)

**Intersection Delay Significantly \* Worse in C9A or C11A than C9T/C14E**  
 \* More than 10 seconds difference in total delay resulting in LOS E or F.

35 Downtown intersections within the perimeter of:  
 Main St./Bellevue Way/NE 12th St./112th Ave. NE

# Typical Downtown Routes - Travel Time Analysis

V1.2

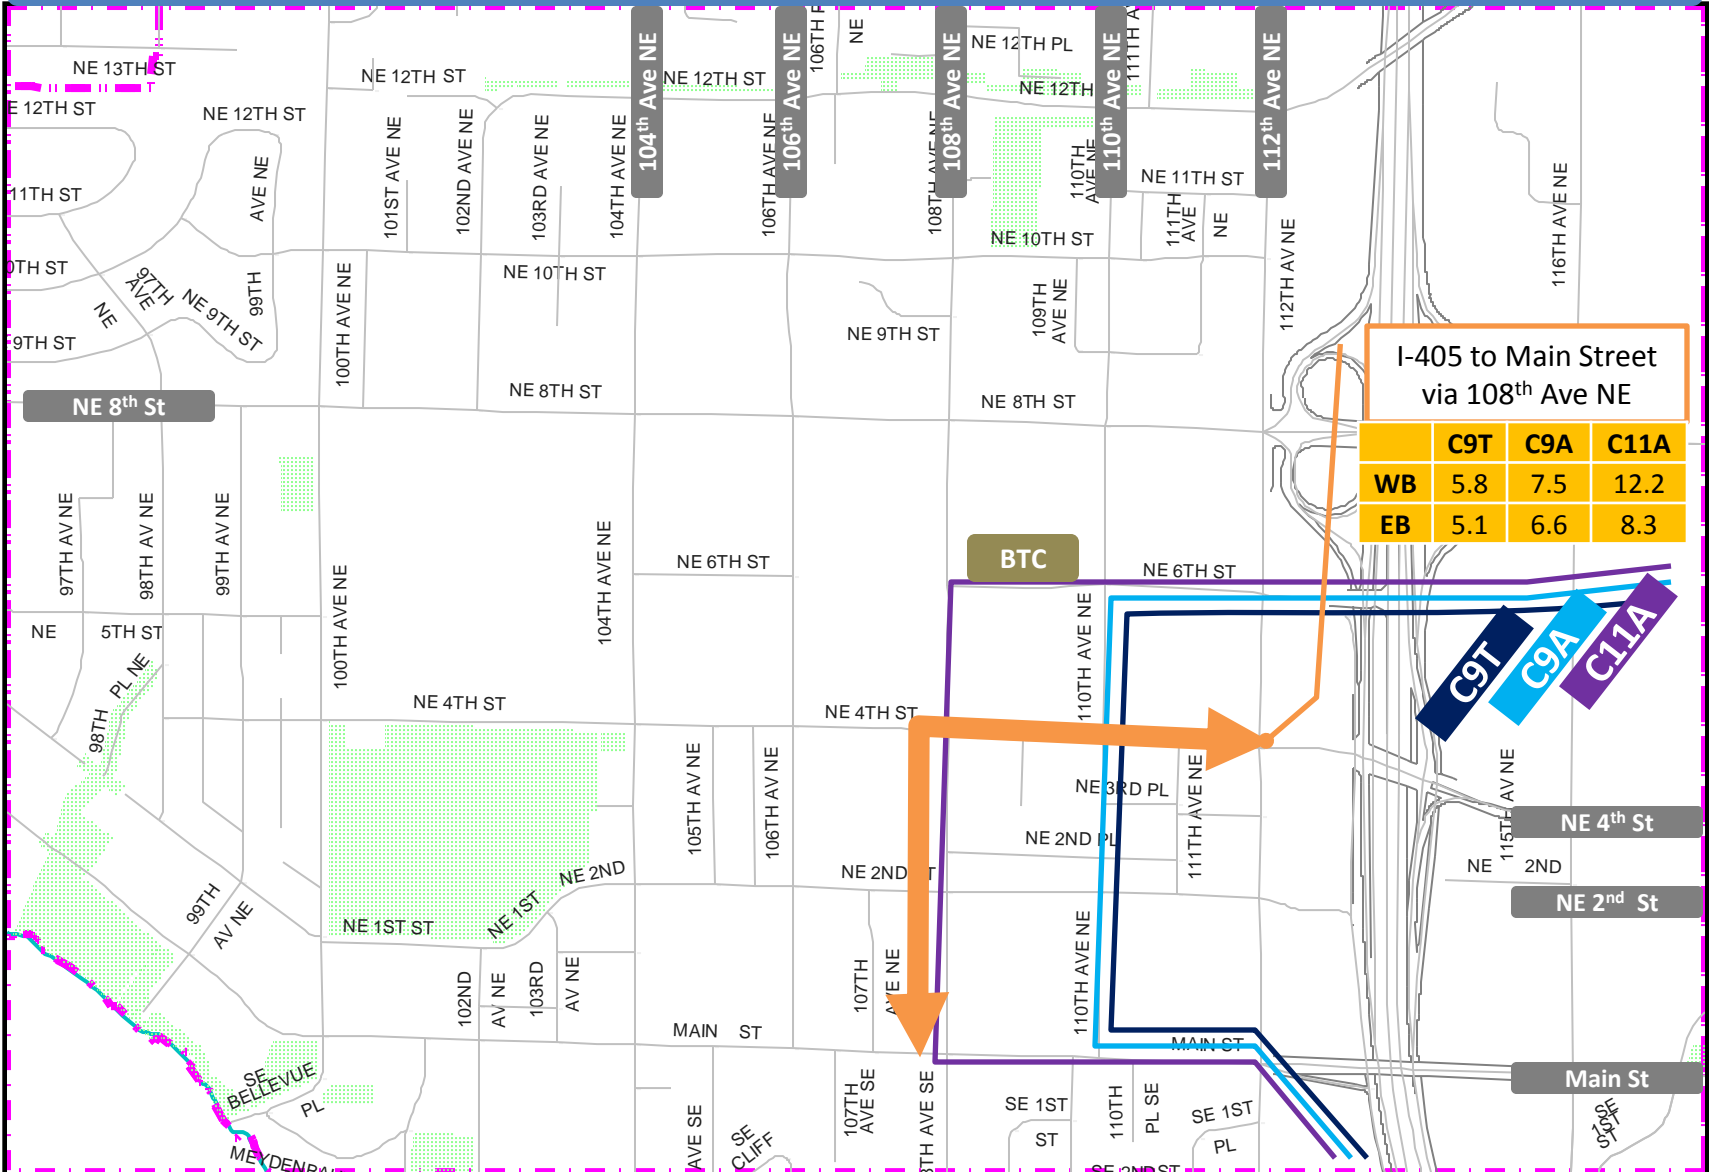

I-405 to Bellevue  
Way via 110<sup>th</sup> Ave NE

	C9T	C9A	C11A
WB	8.7	13.3	12.5
EB	9.2	10.4	10.4

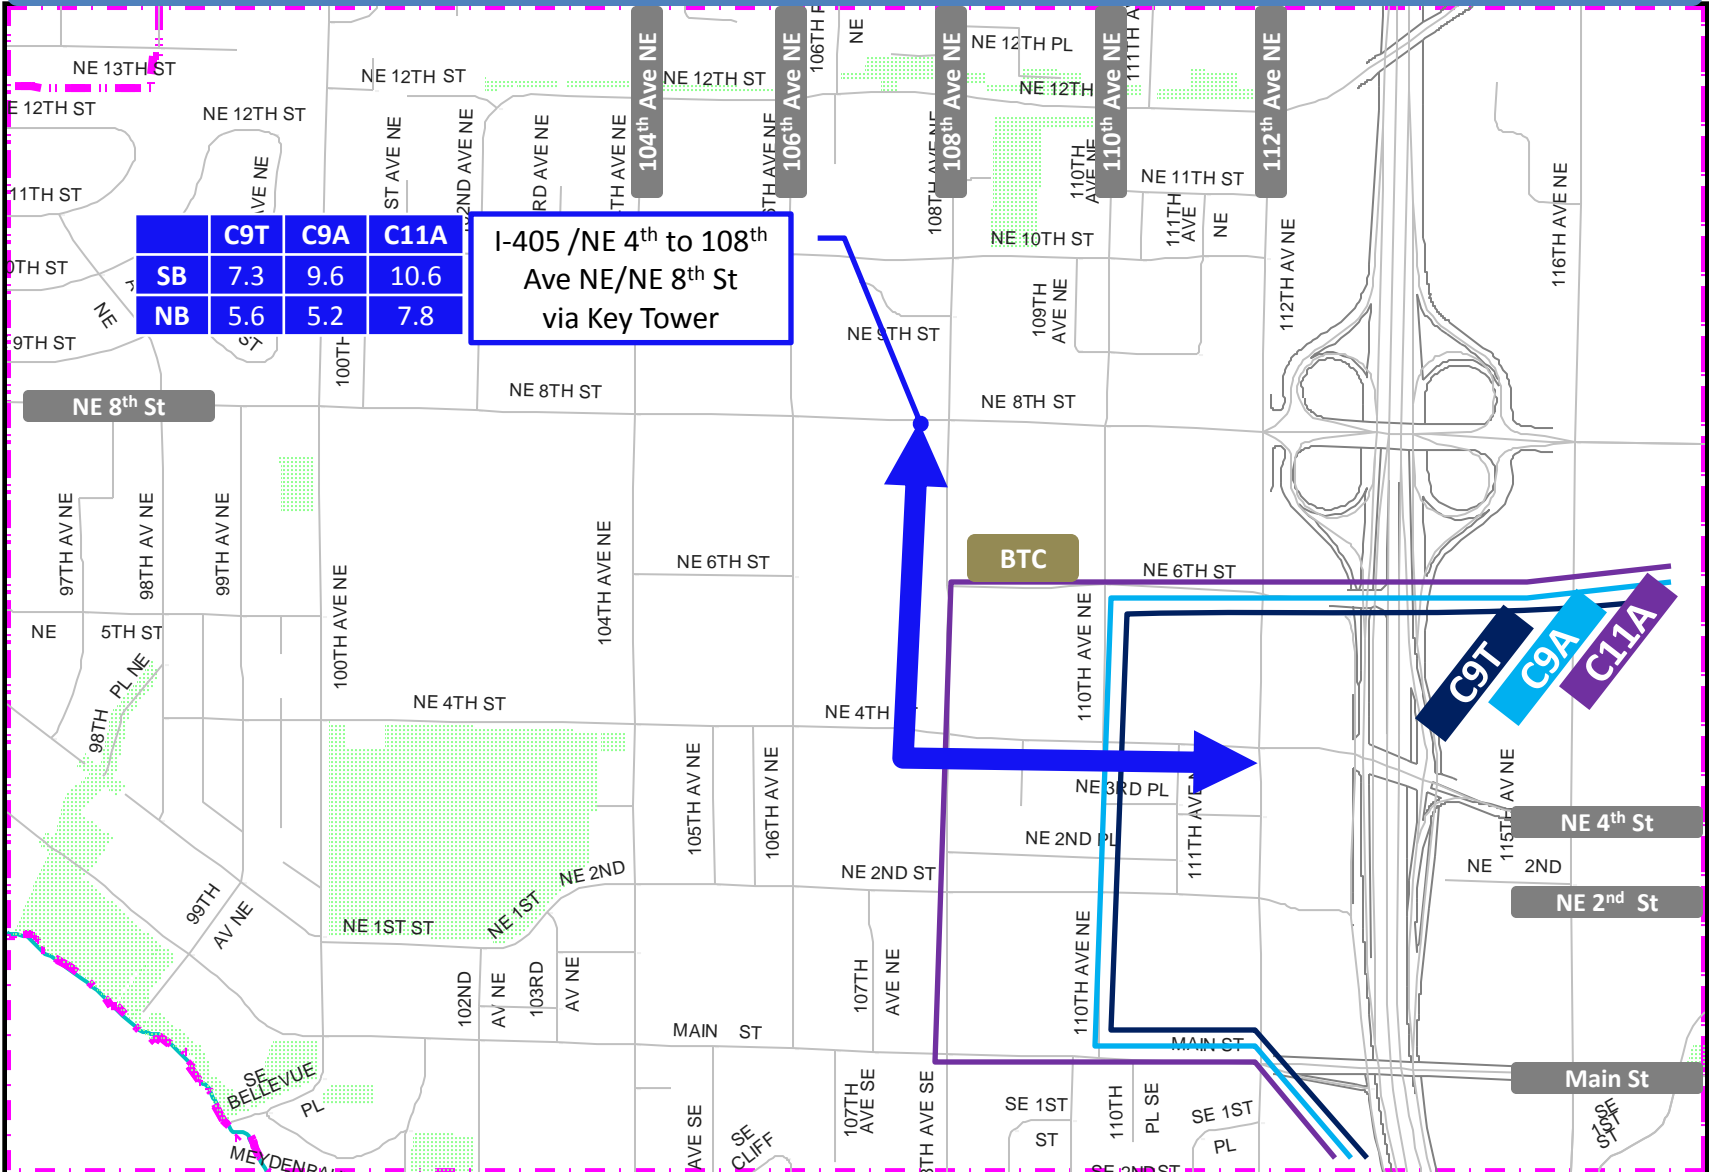

# Typical Downtown Routes - Travel Time Analysis

V1.2

# Typical Downtown Routes - Travel Time Analysis

V1.2

# Downtown Traffic Analysis

## Implications in 2030

- Traffic analysis shows that, based on assumptions in the model for land use growth and the assumed transportation network, Downtown will be very congested in 2030
- At-grade light rail alternatives will make congestion worse
  - Additional congestion for the Downtown as a whole
  - More severe congestion in southeast portion of Downtown
  - Severe congestion/delay at specific intersections
- Congestion also results in increased travel times for light rail in at-grade options
- LRT at-grade more susceptible to service disruptions than grade-separated

# Downtown Traffic Analysis

## Implications Beyond 2030

- Downtown Bellevue's status as a regional growth center (in Vision 2040) means that Downtown will be a local and regional focus for growth beyond 2030
- Traffic analysis shows larger numbers of LOS E intersections in at-grade alternatives— shows increased congestion in the longer term
- Transportation system constrained and prone to operational disruptions.

# Conclusion

110<sup>th</sup> Avenue Northeast Tunnel (C9T) most consistent with 2/09 Council preferences

- Serves core of downtown and is fully grade separated
- Eliminates street impacts, allowing for system growth and flexibility beyond 2030
- Downtown and Hospital/Wilburton stations (NE 6<sup>th</sup> St. I-405 crossing)
- High ridership
- Minimal adverse environmental impacts

Funding shortfall an issue (\$285 million), yet far less than previously:

- C2T: \$1.3 billion (\$600 million over ST2 budget)
- C3T: \$1.2 billion (\$500 million over ST2 budget)
